World Internet Development Report 2022 Routledge

The early years of the twenty-first century have seen dramatic changes within the television industry. The development of the internet and mobile phone as platforms for content directly linked to television programming has offered a challenge to the television set ' s status as the sole domestic access point to audio-visual dramatic content. Viewers can engage with ' television ' without ever turning a television set on. Whilst there has already been some exploration of these changes, little attention has been paid to the audience and the extent to which these technologies are being integrated into their daily lives. Focusing on a particular period of rapid change and using case studies including Spooks, 24 and Doctor Who, Transmedia Television considers how the television industry has exploited emergent technologies and the extent to which audiences have embraced them. How has television content been transformed by shifts towards multiplatform strategies? What is the appeal of using game formats to lose oneself within a narrative world? How can television, with its ever larger screens and association with domesticity, be reconciled with the small portable, public technology of the mobile phone? What does the shift from television schedules to online downloading mean for our understanding of ' the television audience ' ? Transmedia Television will consider how the relationship between television and daily life has been altered as a result of the industry ' s development of emerging new media technologies, and what ' television ' now means for its audiences.

Harnessing the Internet of Everything (IoE) for Accelerated Innovation Opportunities IGI Global Today, network technology is ubiquitous. Whether at home or on

the move, at work or at play, the modern data network is a part of our daily lives. Streaming video, social media and web browsing are just a few of the popular applications that rely on the network, and this list will continue to grow with autonomous vehicles, virtual reality and others, each with their own unique needs. To address the challenges of the demand for these services, the network must continually evolve with new technologies. However, determining which technologies are worth focusing on today is difficult, and the issues which they represent, and address are often complex. In *Network Horizons Emerging Technologies and Applications 2018 - 2019 Edition*, the author highlights key areas of interest for network technology, helping the reader to identify those of the highest importance by explaining the what, why and when of each of these important areas of development to make sure they and their business are prepared for the future.

This book provides an in-depth exploration of the Digital Markets Act (DMA). With an ensemble of contributors who have been involved in major antitrust cases that shaped the legislative text, the book explains the rationale for the DMA, introduces the reader to the digital services falling within its scope, sets out the process for 'gatekeeper' designation, and provides insights into the interpretation issues and enforcement challenges that arise from the obligations it establishes. Analysing the DMA in the broader legal and market context, the chapters examine tensions between the DMA and other (EU and national) rules governing the conduct of online platforms, compare the DMA to similar initiatives undertaken in other jurisdictions, and bring perspectives from other disciplines, such as data protection regulation. A companion website reports on important developments in relation to the DMA, such as the decisions designating tech giants as

gatekeepers and subsequent litigation arising therefrom, and provides links to analysis discussing the developments. An authoritative treatment of the DMA is paired with an easy-to-follow writing style to make this comprehensive compendium essential reading for practitioners, judges, regulators, and researchers working on matters relating to the digital economy.
