Beyond simulation and algorithm development, many developers increasingly use MATLAB even for product deployment in computationally heavy fields. This often demands that MATLAB codes run faster by leveraging the distributed parallelism of Graphics Processing Units (GPUs). While MATLAB successfully provides high-level functions as a simulation tool for rapid prototyping, the underlying details and knowledge needed for utilizing GPUs make MATLAB users hesitate to step into it. Accelerating MATLAB with GPUs offers a primer on bridging this gap. Starting with the basics, setting up MATLAB for CUDA (in Windows, Linux and Mac OS X) and profiling, it then guides users through advanced topics such as CUDA libraries. The authors share their experience developing algorithms using MATLAB, C++ and GPUs for huge datasets, modifying MATLAB codes to better utilize the computational power of GPUs, and integrating them into commercial software products. Throughout the book, they demonstrate many example codes that can be used as templates of C-MEX and CUDA codes for readers' projects. Download example codes from the publisher's website: <http://booksite.elsevier.com/9780124080805/> Shows how to accelerate MATLAB codes through the GPU for parallel processing, with minimal hardware knowledge Explains the related background on hardware, architecture and programming for ease of use Provides simple worked examples of MATLAB and CUDA C codes as well as templates that can be reused in real-world projects

A House by the Park tells the saga of a Syrian immigrant family forged by the Great Depression, buffeted by World War II, and steeled by illness, assimilation and the turmoil of six siblings battling in the post-war era to shed the value systems of their Middle Eastern parents. In addition to painting a vivid portrait of urban neighborhood life in Brooklyn, New York during the forties and fifties, Dr. Keyloun describes in wrenching detail the complexities of personality and behavior that marked the conflicting

relationships within his family. Although much of the discord could easily be attributed to sibling rivalry or the rebellion against cultural anomalies, Dr. Keyloun exposes how his familial relationships were further impacted by what would eventually become known as bipolar disorder. Spanning from his early formative years through the present day, *A House by the Park* is a memoir told with brutal honesty, but also with undeniable love and affection.

Death Waits in the Dark Whitman Pub Llc

The dramatic first-person account of life inside an ultra-fundamentalist American religious sect, and one woman's courageous flight to freedom with her eight children. When she was eighteen years old, Carolyn Jessop was coerced into an arranged marriage with a total stranger: a man thirty-two years her senior. Merrill Jessop already had three wives. But arranged plural marriages were an integral part of Carolyn's heritage: She was born into and raised in the Fundamentalist Church of Jesus Christ of Latter-Day Saints (FLDS), the radical offshoot of the Mormon Church that had settled in small communities along the Arizona-Utah border. Over the next fifteen years, Carolyn had eight children and withstood her husband's psychological abuse and the watchful eyes of his other wives who were locked in a constant battle for supremacy. Carolyn's every move was dictated by her husband's whims. He decided where she lived and how her children would be treated. He controlled the money she earned as a school teacher. He chose when they had sex; Carolyn could only refuse at her own peril. For in the FLDS, a wife's compliance with her husband determined how much status both she and her children held in the family. Carolyn was miserable for years and wanted out, but she knew that if she tried to leave and got caught, her children would be taken away from her. No woman in the country had ever escaped from the FLDS and managed to get her children out, too. But in 2003, Carolyn chose freedom over fear and fled her home with her eight children. She had \$20 to her name. Escape exposes a world tantamount to a prison camp, created by religious fanatics who, in the name of God, deprive their followers the right to make choices, force women to be totally subservient to men, and brainwash children in church-run schools. Against this background, Carolyn Jessop's flight takes on an extraordinary, inspiring power. Not only did she manage a daring escape from a brutal environment, she became the first woman ever granted full custody of her children in a contested suit involving the FLDS. And

in 2006, her reports to the Utah attorney general on church abuses formed a crucial part of the case that led to the arrest of their notorious leader, Warren Jeffs.

Autonomous and nonautonomous Chua's circuits are of special significance in the study of chaotic system modeling, chaos-based science and engineering applications. Since hardware and software-based design and implementation approaches can be applied to Chua's circuits, these circuits are also excellent educative models for studying and experimenting nonlinear dynamics and chaos. This book not only presents a collection of the author's published papers on design, simulation and implementation of Chua's circuits, it also provides a systematic approach to practising chaotic dynamics.

With U.S. intelligence agencies wracked by internal power struggles and paralyzed by bureaucracy, the president has been forced to establish his own clandestine group--Covert-One. It's activated only as a last resort, when the threat is on a global scale and time is running out. The Utopia Experiment When Dresner Industries unveils the Merge, a device that is destined to revolutionize the world and

make the personal computer and smartphone obsolete, Covert-One operative Colonel Jon Smith is assigned to assess its military potential. He discovers that enhanced vision, real-time battlefield displays, unbreakable security, and near-perfect marksmanship are only the beginning of a technology that will change the face of warfare forever--and one that must be kept out of the hands of America's enemies at all costs. Meanwhile, in the mountains of Afghanistan, CIA operative Randi Russell encounters an entire village of murdered Afghans--all equipped with enhanced Merge technology that even the Agency didn't know existed. As Smith and Russell delve into the circumstances surrounding the Afghans' deaths, they're quickly blocked by someone who seems to have access to the highest levels of the military--a person that even the president knows nothing about. Is the Merge really as secure as its creator claims? And what secrets about its development is the Pentagon so desperate to hide? Smith and Russell are determined to learn the truth. But they may pay for it with their lives . . .
