The modern histories of China and Japan are inexorably intertwined. Their relationship is perhaps most obvious in the fields of political, economic, and military history, but it is no less

true in cultural and art history. Yet the traffic in artistic practices and practitioners between China and Japan remains an understudied field. In this volume, an international group of scholars investigates Japan's impact on Chinese art from the mid-nineteenth century through the 1930s. Individual essays address a range of perspectives, including the work of individual Chinese and Japanese painters, calligraphers, and sculptors, as well as artistic associations, international exhibitions, the colotype production of artwork, and the emergence of a modern canon.

Antistatic sprays from several different manufacturers are examined. The sprays are examined for contamination potential (i.e., outgassing and nonvolatile residue), corrosiveness on an aluminum mirror surface, and electrostatic effectiveness. In addition, the chemical composition of the antistatic sprays is determined by infrared spectrophotometry, mass spectrometry, and

ultraviolet spectrophotometry.

The results show that 12 of the 17 antistatic sprays examined have a low contamination potential. Of these sprays, 7 are also noncorrosive to an aluminum surface. And of these, only 2 demonstrate good electrostatic properties with respect to reducing voltage accumulation; these sprays did not show a fast voltage dissipation rate however. The results indicate that antistatic sprays can be used on a limited basis where contamination potential, corrosiveness, and electrostatic effectiveness is not critical. Each application is
