This book provides
comprehensive insights
into the field of duck
production and
management. It presents
a complete overview of

different aspects of duck
production with particular
emphasis on rearing
systems. The book
reviews current
knowledge on the
anatomy, physiology,
genetics, breeding,
nutrition, incubation, and
hatching practices of
ducks. It further
discusses the common
diseases of duck, their
treatment regime, and
prevention strategies.
The book additionally
examines all aspects of
the global duck industry,
the constraints, and the

recommendations. It also
explores nutrient
requirements and feed
evaluation for duck and
evaluates nutrition's
influence on the gut
microbiome. Towards the
end, the book presents
the latest genomic
applications, including
high throughput
sequencing and various
bioinformatics tools in
duck production. This
book serves as an
essential resource for
duck industry
practitioners,
researchers, and

students.

The modern histories of China and Japan are inexorably intertwined. Their relationship is perhaps most obvious in the fields of political, economic, and military history, but it is no less true in cultural and art history. Yet the traffic in artistic practices and practitioners between China and Japan remains an understudied field. In this volume, an international group of scholars investigates Japan's impact on Chinese art from the mid-nineteenth

century through the 1930s.

Individual essays address a range of perspectives, including the work of individual Chinese and Japanese painters, calligraphers, and sculptors, as well as artistic associations, international exhibitions, the collotype production or artwork, and the emergence of a modern canon.

Antistatic sprays from several different manufacturers are examined. The sprays are examined for contamination potential (i.e., outgassing and nonvolatile residue), corrosiveness on an aluminum mirror surface, and electrostatic effectiveness. In addition, the chemical composition of the antistatic sprays is determined by infrared spectrophotometry, mass spectrometry, and ultraviolet spectrophotometry. The results show that 12 of the 17 antistatic sprays examined have a low contamination potential. Of these sprays, 7 are also noncorrosive to an aluminum surface. And of

these, only 2 demonstrate good electrostatic properties with respect to reducing voltage accumulation; these sprays did not show a fast voltage dissipation rate however. The results indicate that antistatic sprays can be used on a limited basis where contamination potential, corrosiveness, and electrostatic effectiveness is not critical. Each application is different and proper evaluation of the situation is necessary. Information on some of the properties of some antistatic sprays is presented in this document to aid in the evaluation process. Ming, James E. Goddard
