Where its predecessor dwelt primarily upon the content, mode, and practitioners of Torah study, this volume focuses upon issues--some theoretical, others pragmatic; some current, others timeless--which concern the practice and implementation of Torah. It opens with an inquiry into whether, and to what extent, Halakhah recognizes the validity and value of an ethic which, in some sense, lies beyond its scope. This is followed by two essays--focused upon events in Israel but of more general significance, as well--which deal with the character--and bounds of Jewish polity. Tangentially related is the subject of the next chapter--straddling the communal and the personal--regarding the parameters of tolerance. The next several chapters treat more purely personal topics--response to suffering, Shabbat prayer, and shemittah. They are followed by discussions of aspects of the sensitive areas of conversion, abortion, and the Israeli chief rabbinate, commingled with two essays, more sociologically oriented, on Jewish self-identification and communal service, and an exchange concerning Baruch Goldstein. These are, in turn, followed by two chapters focused upon modern or centrist Orthodoxy, particularly. The volume concludes with a series of responses to major questions posed in various symposia, in which participants were asked, descriptively and prescriptively, both to evaluate the current Jewish scene and to chart a suggested course for its future

direction.

Since the mid 1990s, data hiding has been proposed as an enabling technology for securing multimedia communication and is now used in various applications including broadcast monitoring, movie fingerprinting, steganography, video indexing and retrieval and image authentication. Data hiding and cryptographic techniques are often combined to complement each other, thus triggering the development of a new research field of multimedia security. Besides, two related disciplines, steganalysis and data forensics, are increasingly attracting researchers and becoming another new research field of multimedia security. This journal, LNCS Transactions on Data Hiding and Multimedia Security, aims to be a forum for all researchers in these emerging fields, publishing both original and archival research results. The six papers included in this issue deal with watermarking security, perceptual image hashing, infrared hiding, steganography and steganalysis.
