Research shows when people are engaged they are more productive. That's why gamification has caught on in the corporate world. The clever combination of fields such as game design, psychology, motivation theory, neurophysiology, and behaviorism has been shown to benefit stakeholders in surprisingly effective ways. This landmark book examines the prevailing notion that simple rewards and competition are effective means for engaging people, and shows how gamification designs can be applied to support long-term collaboration, creativity, productivity, loyalty, and learning. Based on evidence from many research papers, use cases, and practical examples you will learn how to create effective and fun gamification designs for one or multiple systems in a local or global context. Enterprise Gamification is the most comprehensive and scientifically rigorous book yet written in this exciting new field.

This book is published open access under a CC BY 4.0 license. Over the past decades, rapid developments in digital and sensing technologies, such as the Cloud, Web and Internet of Things, have dramatically changed the way we live and work. The digital transformation is revolutionizing our ability to monitor our planet and transforming the way we access, process and exploit Earth Observation data from satellites. This book reviews these megatrends and their implications for the Earth Observation community as well as the wider data economy. It provides insight into new paradigms of Open Science and Innovation applied to space data, which are characterized by openness, access to large volume of complex data, wide availability of new community tools, new techniques for big data analytics such as Artificial Intelligence,

unprecedented level of computing power, and new types of collaboration among researchers, innovators, entrepreneurs and citizen scientists. In addition, this book aims to provide readers with some reflections on the future of Earth Observation, highlighting through a series of use cases not just the new opportunities created by the New Space revolution, but also the new challenges that must be addressed in order to make the most of the large volume of complex and diverse data delivered by the new generation of satellites.

This book is for all users who now, or in the future, want to map rebate processes in SAP S/4HANA and get a practical understanding of contract settlement. Decision-makers and IT managers will also be able to quickly see the possible uses of SAP S/4HANA for Condition Contract Settlement (CCS/CCM) as a sub-function of settlement management. Since SAP ERP 6.0 EHP6, the components Agency Business (LO-AB) and Compensation Management (LO-GT-CHB) have been combined in this holistic application. Subsequent Settlement and SD Bonus have also been replaced by the new tool in SAP S/4HANA. Using typical application scenarios, this book explains not only traditional supplier and customer rebate agreements but also a variety of other settlement scenarios, including fee settlement and commission settlement, chargeback and bonus buys. Readers will also learn about other interesting functionalities such as cross-partner contracts, calculation variants in pricing, and reversing incorrect settlements. This practical guide is supplemented by information on data control reports and helpful tips on integration into accounting. - Customer rebates, supplier rebates, commission settlement - All settlement scenarios in one module - Example process—Sales Commissions for External Agents - 2nd edition with new functionalities in Release 1909

The overwhelming majority of a software system's lifespan is spent in use, not in design or implementation. So, why does conventional wisdom insist that software engineers focus primarily on the design and development of large-scale computing systems? In this collection of essays and articles, key members of Google's Site Reliability Team explain how and why their commitment to the entire lifecycle has enabled the company to successfully build, deploy, monitor, and maintain some of the

largest software systems in the world. You'll learn the principles and practices that enable Google engineers to make systems more scalable, reliable, and efficient—lessons directly applicable to your organization. This book is divided into four sections:

Introduction—Learn what site reliability engineering is and why it differs from conventional IT industry practices

Principles—Examine the patterns, behaviors, and areas of concern that influence the work of a site reliability engineer (SRE)

Practices—Understand the theory and practice of an SRE's day-to-day work: building and operating large distributed computing systems

Management—Explore Google's best practices for training, communication, and meetings that your organization can use

This book presents and analyzes the concept of online brand communities, an emerging and exciting topic in marketing and eCommerce. First, it lays out the foundations like the evolution of the Web and the so-called Social Web, its utility for users and businesses, and the evolution of the marketing mind-set to adapt the Social Web. On this basis, the book then presents a detailed analysis of online brand communities, examining the concept of virtual community with a specific focus on virtual brand communities. In this context the book also explores recent trends related to branding and brand management. Next, it proposes a classification system for online brand communities, taking into account questions like the motivating factors for consumers to join, participate and stay in a community. The process of value creation in communities is examined from both business and consumer perspectives. The book draws to a close with a brief presentation of the process broadly accepted for the successful development of online brand communities.

Angkor, the temple and palace complex of the ancient Khmer capital in Cambodia is one of the world's most famous monuments. Hundreds of thousands of tourists from all over the

globe visit Angkor Park, one of the finest UNESCO World Heritage Sites, every year. Since its UNESCO listing in 1992, the Angkor region has experienced an overwhelming mushrooming of hotels and restaurants; the infrastructure has been hardly able to cope with the rapid growth of mass tourism and its needs. This applies to the access and use of monument sites as well. The authors of this book critically describe and analyse the heritage nomination processes in Cambodia, especially in the case of Angkor and the temple of Preah Vihear on the Cambodian/Thai border. They examine the implications the UNESCO listings have had with regard to the management of Angkor Park and its inhabitants on the one hand, and to the Cambodian/Thai relationships on the other. Furthermore, they address issues of development through tourism that UNESCO has recognised as a welcome side-effect of heritage listings. They raise the question whether development through tourism deepens already existing inequalities rather than contributing to the promotion of the poor.
