SAP Global Trade Services (GTS) helps companies maximize supply chain performance and reduces the overall cost and risk of global trade by ensuring regulatory compliance, accelerating trade activity, and enabling trade compliance automation. The Practical Guide to SAP GTS helps the user navigate the system, while offering compliance insight to maximize their return on investment. Dive into difficult-to-navigate menus and review available functionality. Using screenshots and detailed instructions, readers will obtain best practices for meeting and exceeding compliance standards. Includes suggested audit plans to sustain long term compliance. The book is current to version 10.1 and explores version 11.0 and its new features. This book offers:

- Tips and tricks for leveraging SAP GTS to automate trade compliance
- Walk step by step through business processes
- Overview of regulatory requirements and compliance suggestions
- Review of Version 11.0 with screenshots

**SAP NetWeaver AS ABAP - System Administration**  
IBM Redbooks

Web Dynpro ABAP, a NetWeaver web application user interface tool from SAP, enables web programming connected to SAP Systems. The authors' main focus was to create a book based on their own practical experience. Each chapter includes examples which lead through the content step-by-step and enable the reader to gradually explore and grasp the Web Dynpro ABAP process. The authors explain in particular how to design Web Dynpro components, the data binding and interface methods, and the view controller methods. They also describe the other SAP NetWeaver Elements (ABAP Dictionary, Authorization) and the integration of the Web Dynpro Application into the SAP NetWeaver Portal. The new edition has been expanded to include chapters on subjects such as POWER Lists; creating the Modal Windows and External Windows; using Web Dynpro application parameters and Shared Objects to communicate between the Web Dynpro ABAP Application and Business Server Pages; and creating multi-language mails using Web Dynpro ABAP.

The power of the IBM System z, combined with the flexibility of Linux on System z, provides the ideal platform on which to implement SAP application servers. System z provides the benefits of continuous availability, high performance, scalability, and ease of management; these qualities support and complement mission-critical SAP business applications. This IBM Redbooks publication focuses on the implementation of SAP application servers on Linux on System z to leverage the synergy of this combination of products. It provides detailed information to guide you through the planning process, including resource sharing considerations, hardware and software requirements, support and maintenance. This book takes you through the steps to prepare the system environment, describing system and network configurations, and demonstrates the procedures for installing and customizing your system. It describes in detail how to install SAP application servers in z/VM Linux images, including the installation of SAP and Java and hipersockets. Finally, it provides guidance for performance tuning and introduces some useful monitoring tools.

Practical Workflow for SAP SAP PRESS

This benchmark book is indispensable when it comes to planning, implementing and maintaining SAP system landscapes. Based on mySAP ERP 2004 (web AS 6.40), readers are provided with strategies and concepts for change and transport management, including detailed best practices for handling the respective SAP tools.

Integrating IBM Security and SAP Solutions SAP PRESS

Sebastian Herden pr ä sentiert das Konzept des Model-Driven-Configuration-Managements (MDCM) zur Schließung der identifizierten semantischen Lücke zwischen Unternehmensarchitektur und IT-Konfiguration. Die grundlegende Idee des vorgestellten MDCM-Konzepts zur nahtlosen Integration von Enterprise-Architecture-Management und IT-Konfigurationsmanagement im IT-Betrieb ist es, einen Model-Driven-Engineering-Ansatz zu entwickeln. Das Ziel des MDCM ist neben der Ausrichtung der resultierenden IT-Konfiguration an den Geschäftsprozessen eines Unternehmens und der nachvollziehbaren und transparenten Gestaltung die Unabhängigkeit der Qualität von individuellem Wissen.

SAP on DB2 9 for z/OS: Implementing Application Servers on Linux for System z SAP PRESS

SAP is a market leader in enterprise business application software. SAP solutions provide a rich set of composable application modules, and configurable functional capabilities that are expected from a comprehensive enterprise business application software suite. In most cases, companies that adopt SAP software remain heterogeneous enterprises running both SAP and non-SAP systems to support their business processes. Regardless of the specific scenario, in heterogeneous enterprises most SAP implementations must be

integrated with a variety of non-SAP enterprise systems: Portals Messaging infrastructure Business process management (BPM) tools Enterprise Content Management (ECM) methods and tools Business analytics (BA) and business intelligence (BI) technologies Security Systems of record Systems of engagement The tooling included with SAP software addresses many needs for creating SAP-centric environments. However, the classic approach to implementing SAP functionality generally leaves the business with a rigid solution that is difficult and expensive to change and enhance. When SAP software is used in a large, heterogeneous enterprise environment, SAP clients face the dilemma of selecting the correct set of tools and platforms to implement SAP functionality, and to integrate the SAP solutions with non-SAP systems. This IBM® Redbooks® publication explains the value of integrating IBM software with SAP solutions. It describes how to enhance and extend pre-built capabilities in SAP software with best-in-class IBM enterprise software, enabling clients to maximize return on investment (ROI) in their SAP investment and achieve a balanced enterprise architecture approach. This book describes IBM Reference Architecture for SAP, a prescriptive blueprint for using IBM software in SAP solutions. The reference architecture is focused on defining the use of IBM software with SAP, and is not intended to address the internal aspects of SAP components. The chapters of this book provide a specific reference architecture for many of the architectural domains that are each important for a large enterprise to establish common strategy, efficiency, and balance. The majority of the most important architectural domain topics, such as integration, process optimization, master data management, mobile access, Enterprise Content Management, business intelligence, DevOps, security, systems monitoring, and so on, are covered in the book. However, there are several other architectural domains which are not included in the book. This is not to imply that these other architectural domains are not important or are less important, or that IBM does not offer a solution to address them. It is only reflective of time constraints, available resources, and the complexity of assembling a book on an extremely broad topic. Although more content could have been added, the authors feel confident that the scope of architectural material that has been included should provide organizations with a fantastic head start in defining their own enterprise reference architecture for many of the important architectural domains, and it is hoped that this book provides great value to those reading it. This IBM Redbooks publication is targeted to the following audiences: Client decision makers and solution architects leading enterprise transformation projects and wanting to gain further insight so that they can benefit from the integration of IBM software in large-scale SAP projects. IT architects and consultants integrating IBM technology with SAP solutions.

SAP PRESS

Understand everything you need to know: configuration, administration, development, and more Learn how to perform tasks efficiently and effectively using step-by-step instructions and screenshots Stay up to date with the latest information for release 7.3 An SAP NetWeaver Portal implementation has many stages, and this book will help you every step of the way. From blueprinting, installation, and configuration through portal content development and post-implementation monitoring techniques, you'll find practical explanations and step-by-step instructions that will guide your everyday work. Whether you're new to SAP NetWeaver Portal or want to learn about the new features in the latest release, this reference is your essential companion. Complete Lifecycle of an Implementation Understand the lifecycle of an SAP NetWeaver Portal implementation, from conception to completion. Installation and Configuration Learn about the process of installing and configuring SAP NetWeaver Portal with step-by-step instructions and detailed screenshots. Portal Content Development Create roles, worksets, pages, and iViews with ease, and learn how to manage the appearance of a portal.Custom Enhancements Understand the various technologies and steps involved in developing custom content for an SAP NetWeaver Portal implementation. Up to Date for Release 7.3 Explore the new features of SAP NetWeaver Portal 7.3, such as change recording and creating a portal role based on a backend role.

The Comprehensive Guide IBM Redbooks

Managing the movement of goods from one place to another is just one small requirement of a Transportation Management (TM) software. To understand the complete process, there is so much more to consider. This guide provides a comprehensive overview of the transportation processes supported by SAP TM 9.3 including functional highlights, system architecture options (including HANA), and integration aspects. Dive into planning, execution, and tracking processes and detailed configuration. #### Document Imaging Report IBM Redbooks

This is a must-have, comprehensive guide to SAP Manufacturing Integration and Intelligence (SAP MII) that will teach you how to implement and configure SAP MII to fit your different manufacturing tasks and issues. With this book, you learn how to create composite applications that connect your business processes with your plant systems. And, once you know how to link your plant systems to generate comprehensive and accurate data, the authors show you how to use SAP MII tools to generate accurate reports and dashboards for analysis and real-time monitoring, leading to a more efficient and effective shop floor. 1 Administrating and Configuring SAP MII Learn to how to set up, configure, and use the various components in SAP MII to help you develop general data reports for manufacturing integration and analytics. 2 Developing MII Composite Applications Explore the SAP MII Workbench to develop content and create different types of data queries, business logic, and visualizations to manage and view plant data. 3 Managing Plant Floor Integration Get an in-depth look at the integration aspects of SAP MII, including how to connect to manufacturing plant floor systems using data servers, and how to synchronize the plant floor with other parts of the enterprise. 4 Implementing SAP MII Composite Applications Find out about the different implementation scenarios, including the solution architectures and best practices to follow for developing and implementing SAP MII. 5 Tips and Tricks Throughout Discover the insider information you need for developing SAP MII composite applications through its model-based interface.

#### Information Systems for Engineering and Infrastructure Asset Management Pearson Education

Many large and medium-sized organizations have made strategic investments in the SAP NetWeaver technology platform as their primary application platform. In fact, SAP software is used to manage many core business processes and data. As a result, it is critical for all organizations to manage the life cycle of user access to the SAP applications while adhering to security and risk compliance requirements. In this IBM® Redbooks® publication, we discuss the integration points into SAP solutions that are supported by the IBM Security access and identity management product capabilities. IBM Security software offers a range of identity management (IdM) adapters and access management components for SAP solutions that are available with IBM Tivoli® Identity Manager, IBM Tivoli Directory Integrator, IBM Tivoli Directory Server, IBM Access Manager for e-business, IBM Tivoli Access Manager for Enterprise Single Sign-On, and IBM Tivoli Federated Identity Manager. This book is a valuable resource for security officers, consultants, administrators, and architects who want to understand and implement an identity management solution for an SAP environment.

Implementing and Configuring SAP MII Jones & Bartlett Learning \* Explore the capabilities of ABAP's new Business Rule Framework \* Find out about functionality, content management, expression and action types, and more \* Benefit from detailed code tutorials, deployment tips, and extension options With BRFplus, SAP provides a full-fledged Business Rule Management System, based on proven ABAP technology. This book is your one-stop resource to understanding and using BRFplus: Learn how to create applications with the BRFplus Workbench as well as the API, find out how to manage applications and objects, and benefit from an extensive reference chapter on functions, data objects, rules and rulesets, expressions, and actions. Additional chapters on tools, performance, deployment, and other advanced topics round off this book. BRFplus Walk-Through and Tutorial Get started with a complete tour through all Workbench tools, follow the development cycle, and learn how to create applications in the Workbench or via the API. Objects Learn how to define, use, and link objects to each other, and benefit from a comprehensive reference for all object types, such as expressions, actions, and more. Tools, Deployment, and Administration The book covers the entire development cycle: Imports and exports, transports, administration, as well as remote and local scenarios, are all dealt with in detail. Advanced Topics Once your applications are deployed, you'll want to tune them: Find out how to enhance performance, trace processing, extend BRFplus'

functionality, and integrate it into custom user interfaces.
