Run a fast ad hoc code inspection from the ABAP Workbench. Run a fast ad hoc inspection from the Code Inspector itself. Define personal (private) re-usable code inspections. Ad hoc inspection definitions and results are not saved - you use them to

Insights of code inspector - SAPTechnical.com

As you may know, Code Inspector does not allow to check SAP objects in a customer system, with the exception of code recently modified by an SAP note. Maybe you could use the object collector "Called/Calling Procedures" which should be able to find called programs and build an objectset based on the static call stack.

In the Code Inspector, you can define inspections that, with the help of check variants, examine certain sets of objects. As the result of an inspection, you receive information messages, warning messages, or error messages on different properties of the examined objects. The concepts are explained in the blog by Nick Young [Setting up and using the SAP Code Inspector](#).
