This book on 'Configuring SAP Accounts Receivable & Accounts Payable (SAP S/4HANA Finance)' covers:

Case Study Accounts Receivable and Accounts Payable Customer Accounts Vendor Accounts Incoming Invoices / Credit Memos Release for Payment Outgoing Payments Outgoing Invoices / Credit Memos Incoming Payments Payments with Payment Cards Dunning Open Item Clearing Down Payment Received Down Payment Made Adjustment Posting / Reversal Interest Calculation Closing Information System Apps for FI-A/R & FI-A/P The book starts with a case study that forms the basis for further discussions across the various Chapters. The case study mirrors a real life business enterprise that wants to implement SAP Accounts

Receivable and Accounts Payable components, as a part of configuring SAP FI. The book provides an overview of SAP Accounts Receivable (FI-A/R) and Accounts Payable (FI-A/P). It, then, goes on to discuss customer and vendor accounts, in detail. It outlines the structure of customer / vendor master records, and elaborates the preparations and the configuration settings that you may need to make in the system to create / change / delete the master records. It discusses the various business transactions of both FI-A/R and FI-A/P viz., incoming invoices / credit memos, release for payment, outgoing payments, outgoing invoices / credit memos, incoming payments, payments with payment cards, dunning, open item clearing, down payment received / made, adjustment posting / reversal, interest calculation, closing, information system and Apps for SAP FI-A/R and FI-A/P. It helps you to comprehend the configuration activities that you need to complete, in setting up these transactions in the system. For example, on configuring the settings for outgoing payments, it discusses (in detail) the global settings and the steps that are required for setting up the manual and the automatic payments. In dunning, it deals with basic settings, dunning procedure, printout, dunning process flow etc. In interest calculation, it

starts with the fields (in customer / vendor master) that are relevant for item interest calculation and goes on to discuss the interest calculation process, global settings, actual interest calculation, interest posting and interest letters. In closing, it discusses the important closing operations like count (including balance confirmation), valuate and reclassify, in great detail. The book also discusses the FI-A/R and FI-A/P information system besides discussing the Apps for accounts receivable / accounts payable accountants, managers and credit controllers. As with my other books on SAP, this also follows a case-study approach to make your learning easy. Every effort has been taken to guide you, step-by-step, in configuring your SAP system in implementing SAP Accounts Receivable and Accounts Payable, in SAP S/4HANA (1909), to meet your exact business needs. Each configuration activity has been discussed with appropriate screen shots (from an SAP system) and illustrations to help you 'see' what is being discussed in that activity / step. You will see a lot of additional information, provided across the Chapters and the Sections, to help you understand better a topic or a setting or a concept. The entire content of the book, vide various Chapters, has been presented as in SAP IMG (Implementation Guide) for

easy comprehension. You will come across with appropriate menu paths and Transactions, to help you to navigate the various configuration activities. In all, you can use this book as a desktop-reference for configuring SAP FI-A/R and FI-A/P.

This manual, written with the objective of providing detailed training to both, consultants and users goes deep into the subject from initial configurations to covering the entire Order to Cash and logistics cycle. The integration points of SD-LE with Purchasing/Inventory and Accounting are explained in detail and the chapters marked clearly if it is a Configuration (C) or Transaction (U) or both. Since most of the book has been written in standard SAP, once a company code is set up along with some basic configurations defined in the first few pages, a SAP user, if so desires, can stay only with the areas marked 'U' by

passing the 'C' since not everything in standard SAP depends on configurations. Consultants or to-be consultants, of course, need to understand both sides of SAP. The effects of changes done in configuration are immediately followed by their effect on the transactions, thereby making the learning relational in real time for better understanding. From the user's perspective, not much from the subject has been left out in writing this manual and every effort has been taken to keep it relevant to the execution of order processing and logistics functions of day to day working on SAP in an orderly flow. This manual is really a result of many years of training both consultants, and business users. The author appreciates your comments and suggestions on improving this book. If I can be of any assistance in helping you understand the subject better or obtaining access to the system on which it was written for easier understanding, please feel free to drop in a mail to

SAP is a powerful software that meets the requirement of business all over the world. This well-organised book comprising 34 chapters is useful for both beginners and professionals. Being a learning guide and a user manual, the book will be immensely valuable for all those who are training to be SAP consultant. If you are a material/production manager, a QM professional or a business executive, you will find that the book brings a lot of convenience in your work and minimises inventory losses. A New Approach to SAP Implementation Structured dialog :The dialog between the consultant and the users

should be based on the structure of this book. The consultant would demonstrate a business transaction, e.g. goods receipt, in its simplest form. He would then explain the data items on the screens, their meaning and significance. He would enquire whether the data item is relevant for the client company. The data items that are not relevant can be hidden in the implementation, and related configuration marked as not required. When the consultant would come to a section explaining IMG node, his questions to the user would be designed to collect the information required to configure that node. Prototyping :As the structured dialog continues, the consultant would go on doing the configuration. By the end of the dialog, the consultant would have built a company-specific prototype. Training and trials :The prototype would be a rough-cut implementation of SAP for the company. It would be used for training the users. After training, the users would try out the system. They would perform routine transactions several times using real-life data of their company. They would try different scenarios and record their observations. Refinement :After prototype

trials, the consultant and the users would sit together to discuss what the users required to do, but could not do with the prototype. The consultant would use this input to refine the prototype and to build new functionality, if needed. Configuration manual :The documentation of SAP implementation includes a configuration manual. This configuration manual should be structured on the lines of this book as explained in Chapter 34. Such a configuration manual will be easy to understand as it groups logically related elements together. User manual :This book will serve as a generic user manual. Company-specific user manual can also be structured on the lines of this book including only company-specific guidelines for the users. Now, you might be wondering why someone would write yet another book on SAP. Well, when I looked at the market, and read through the Plant Maintenance book, I realized there was a gap in the material. There was very little material that talked about Service Management. While there is a lot of overlap between SM and PM, there is a lot of additional integration that happens between sales and distribution that isn't really covered in any of the books I've found. This book is both how to manual and a reference guide. The idea is that the initial sections of the book will provide you with a quick start guide to implementing service management. Then I provide a walk through to see how the process will look for the user, and finally all the individual pieces of configuration that make up

the process. It will guide you through the configuration in all of the following areas: Service Orders* Service Notifications* Repair Sales Orders* Technical Objects* as well as the all the integrations points within those areas. It even includes bonus material for dealing with third party service. This is THE comprehensive guide to SAP Service Management configuration.

SAP S/4HANA FINANCIAL ACCOUNTING CONFIGURATION

This book explains all the concepts underpinning SAP's HR Time Management Module. It is a comprehensive technical manual which explains every single node of the User Menu and the

Configuration. The book first gives an overview of a concept explaining what it is, how it is used and how it relates to the other concepts. It then explains its properties, which are fields in a configuration node. This book is designed to be used both as a reference manual and a learning guide. As a learning guide, it offers four views, each for a different target audience. • It can be read from the Senior Management's perspective to gain a broad understanding of the subject and what SAP can do for them. • Business Process Owners can achieve a higher level of understanding by getting to know more of SAP concepts and how to perform different tasks in SAP. • Users can acquire a thorough understanding of different tasks and concepts underlying them. • Functional consultants and proficient users can read the book to gain a complete understanding of the system. As a technical reference, the book can be used to locate the relevant material through the Table of Contents, Index, 'SAP Menu' and 'SAP Customizing Implementation Guide (IMG)'. The last two follow the Table of Contents. If the reader is in SAP's User Menu or Configuration,

the chapter number for these nodes can be found in 'SAP Menu' and 'IMG'. If a node is not covered in the book, the reason for not doing so is mentioned. The implementation of SAP HR Time Management and documentation can also be guided by the structure of this book. A BETTER WORLD : There is a lot we can do to make our world a better world, just as we discover better ways to support our businesses. Read short articles inside on some of the ideas of World Integration and Improvement Initiative. World Government 691 World Language 693 Good Governance 699 City without Traffic Lights 705 SAP is a great software. One needs to fully understand its features in order to effectively exploit them for the benefit of customers. Mr. Agrawal's books on SAP HR have a unique approach. A chapter usually focuses on a single business concept, and discusses the user interface as well as its associated configuration. This logical division makes it easier for readers to understand the functionality. Another important feature of these books is the level of detail. Each screen and each field in a screen is explained. Explanation includes meaning, use case and in

some cases guidelines. Details are balanced by overviews explaining the concepts and their relationships. While explaining functionality, Mr. Agrawal has taken efforts to highlight what can be done and how it is to be done. This is particularly important for less experienced users and consultants. Indicating chapter numbers against each menu and configuration item is a very useful innovation, as it establishes direct link between the SAP system and the book. Another useful feature is that these books can be read not only by consultants, but also by users, business process owners and even by senior managers. The importance of each topic for each category of users is specified. Mr. Agrawal has taken considerable pain in writing these books, and I congratulate Mr. Agrawal on his achievement and thank him for his contribution to the SAP community. K.
