This new Edition of Electronic Commerce is a complete update of the leading graduate level/advanced undergraduate level textbook on the subject. Electronic commerce (EC) describes the manner in which transactions take place over electronic networks, mostly the Internet. It is the process of electronically buying and selling goods, services, and information. Certain EC applications, such as buying and selling stocks and airline tickets online, are reaching maturity, some even

exceeding non-Internet trades. However, EC is not just about buying and selling; it also is about electronically communicating, collaborating, and discovering information. It is about e-learning, e-government, social networks, and much more. EC is having an impact on a significant portion of the world, affecting businesses, professions, trade, and of course, people. The most important developments in EC since 2014 are the continuous phenomenal growth of social networks, especially Facebook, LinkedIn and Instagram, and the

trend toward conducting EC with mobile devices. Other major developments are the expansion of EC globally, especially in China where you can find the world's largest EC company. Much attention is lately being given to smart commerce and the use of AI-based analytics and big data to enhance the field. Finally, some emerging EC business models are changing industries (e.g., the shared economy models of Uber and Airbnb). The 2018 (9th) edition, brings forth the latest trends in e-commerce, including smart commerce, social

Over the last few  
years, financial  
statement scandals,  
cases of fraud and  
corruption, data  
protection  
violations, and other  
legal violations have  
led to numerous  
liability cases,  
damages claims, and  
losses of reputation.  
As a reaction to  
these developments,  
several regulations  
have been issued:  
Corporate  
Governance, the  
Sarbanes-Oxley Act,  
IFRS, Basel II and

BiIMoG, to name

just a few. In this  
book, compliance is  
understood as the  
process, mapped not  
only in an internal  
control system, that  
is intended to  
guarantee conformity  
with legal  
requirements but also  
with internal policies  
and enterprise  
objectives (in  
particular, efficiency  
and profitability).  
The current literature  
primarily confines  
itself to mapping  
controls in SAP ERP  
and auditing SAP  
systems. Maxim  
Chuprunov not only  
addresses this subject  
but extends the aim  
of internal controls  
from legal  
compliance to  
include efficiency  
and profitability and  
then well beyond,

compliance-relevant  
questions in the form  
of an audit guide for

descriptions (Part II),  
but also shows how

system in an organization, especially focusing on the continuous control monitoring topics. Maxim Chuprunov mainly targets compliance experts, auditors, SAP project managers and consultants responsible for GRC products as readers for his book. They will find indispensable information for their daily work from the first to the last page. In addition, MBA, management information system students as well as senior managers like CIOs and CFOs will find a wealth of valuable information on compliance in the SAP ERP

environment, on GRC in general and its implementation in particular.
