The methods used for inventory valuation have been transformed with SAP

S/4HANA. The material ledger is now integrated with the Universal Journal and is the sole means for valuing materials. This book covers how valuation is managed in up to three different currencies, in parallel, without requiring the actual costing functionality. Learn how the material ledger interacts with the Universal Journal and how to configure the currencies used for parallel valuation. Investigate various valuation approaches and see how legal, group, and profit center valuation views can be used to help understand company profitability. Be guided through the configuration steps that enable these multiple valuation approaches. For those who are using or intending to use actual costing, learn how the actual cost is determined and the steps required to set this up to achieve maximum benefit. Find out how the actual costing run works and how alternative

valuation runs can be used to provide additional information about inventory values.

Review the optional business functions FIN_CO_COGM for parallel valuation of cost of goods manufactured, and LOG_MM_SIT for intercompany stock-in-transit and actual costing to see how they can be used for additional analysis of inventory.

Investigate the different forms of balance sheet valuation and how they interact with the material ledger. - Valuation in parallel currencies, with and without transfer pricing - Defining currencies and using them with the material ledger - Valuation using standard cost, moving average cost, and actual cost - Balance sheet valuation methods

PHI Learning Pvt. Ltd. Learn how to migrate your SAP data to Azure simply and successfully. Key

Features Learn why Azure is suitable for business-critical systems Understand how to migrate your SAP infrastructure to Azure Use Lift & shift migration, Lift & migrate, Lift & migrate to HANA, or Lift & transform to S/4HANA Book Description Cloud technologies have now reached a level where even the most critical business systems can run on them. For most organizations SAP is the key business system. If SAP is unavailable for any reason then potentially your business stops. Because of this, it is understandable that you will be concerned whether such a critical

system can run in the public cloud. However, the days when you truly ran your IT system on-premises have long since gone. Most organizations have been getting rid of their own data centers and increasingly moving to co-location facilities. In this context the public cloud is nothing more than an additional virtual data center connected to your existing network. There are typically two main reasons why you may consider migrating SAP to Azure: You need to replace the infrastructure that is currently running SAP, or you want to migrate SAP to a new database. Depending on your goal SAP offers different

migration paths. You can decide either to migrate the current workload to Azure as-is, or to combine it with changing the database and execute both activities as a single step. SAP on Azure Implementation Guide covers the main migration options to lead you through migrating your SAP data to Azure simply and successfully. What you will learn
