MASTERING ENTERPRISE SOA WITH SAP NETWEAVER AND MYSAP ERP SAP PRESS

This book is a businessman's bible about business process design. Using SAP's leading enterprise software product R/3 as a backdrop, it is the first book to explain the structure and content of common business processes that management deals with on a daily basis. The authors paint the future of business process change by giving the reader the terminology, content, and technology behind an evolving standard for enterprises in the new age - the business blueprint. Here is a collection of process and object descriptions that are the basis for streamlining your company in the future. The book explains how to understand the process content of systems like R/3 and apply it to your company. In particular, this book explains the impact of new technologies such as Windows NT and the Internet on future business process design. It considers the scenarios that companies will need to integrate based on a common business process understanding. Interventional Pain Management: Image-Guided Procedures CreateSpace

Mastering Enterprise SOA with SAP Netweaver and MySAP ERP IGI Global

Inhaltsangabe:Abstract: In today s companies changes happen very fast. On the one hand more and more new technologies are arising, on the other hand business processes have to change because of mergers and acquisitions, new regularities, changing customer requirements and so forth. As business processes are supported by information technology, information technology has to cope with both types of changes. From a business perspective on-demand adaptation of information technology to business is required. Service-oriented architecture (SOA) is currently discussed as an opportunity

to better adapt to those changes. According to Gartner's hype cycle for emerging technologies SOA already crossed the peak and is now in the trough of disillusionment. But SOA is far from being unfashionable as it would be expected during this phase. There is still high media coverage and a lot of SOA books have been published recently or will be published during the next months. What is true, however, is that the expectations are getting more realistic and people start to think about the real benefits. This is probably due to the fact that companies experienced, that implementing an SOA is not as fast and easy as the marketing hype might have given the impression. Although the hype surrounding SOA is immense, the concept is still in its early childhood with regards to concrete implementations. According to a survey conducted by Experton Group only three percent of 110 German enterprises, all with over 100 Employees, have a SOA based solution in place. Besides high costs expected from migration to SOA the lack of SOA know-how is identified as a main reason. As the survey reveals 45 percent of the interviewed enterprises have nearly no knowledge or no knowledge about SOA at all. Another 38 percent have only basic knowledge. The lack of knowledge is confirmed by a survey from the research company Quocirca, which found out, based on a sample size of 1500, that 30 percent of respondents have absolutely no knowledge about SOA and 25 percent have only minimal knowledge. Similar results are found among enterprises using SAP software. The results of an online survey conducted by the German speaking SAP User Group (DSAG) shows that 64 percent of 344 enterprises are just a little or not at all familiar with enterprise SOA and only every fifth enterprise has developed a platform strategy. Furthermore, enterprise SOA is still a topic of the IT department, although it would be [...]
