Inside a Secret Software Laboratory Woodhead Publishing
How does one of the world's biggest Enterprise Resource Planning (ERP) suppliers develop software? How do Oracle, SAP, Microsoft and Co really work? Christine Grimm presents a first-hand account of a social researcher who entered the software laboratory of one of the biggest ERP providers. Presenting an in-depth ethnography on how people act within such labs, she reveals the highly unexpected social character of programming and shows how the vendor reorganizes himself to find new ways to respond to the expectations of the market. Furthermore, the author

highlights the informal practices when an ERP system, as a defective or incomplete product, re-enters the supplier's labs. The book provides a window into what happens if bugs are dug up and emotions on both the supplier and customer sides are running high.

Business Process Integration with SAP ERP
Springer Science & Business Media

This volume contains the proceedings of the 3rd International Conference on Business Process Management (BPM 2005), organized by LORIA in Nancy, France, September 5–8, 2005. This year, BPM included several innovations with respect to previous editions, most notably the addition of an industrial program and of co-located workshops. This was the logical result of the significant (and still growing) industrial interest in the area and of the broadening of the research communities working on BPM topics. The interest in business process management (and in the BPM conference) was demonstrated by the quantity and quality of the paper submissions. We received over 176 contributions from 31 countries, accepting 25 of them as full papers (20 research papers and 5 industrial papers) while 17 contributions were accepted as short papers. In addition to the regular, industry, and short presentations invited lectures were given by Frank Leymann and Gustavo Alonso. This combination of research papers, industrial papers, keynotes, and workshops, all of very high quality, has shown that BPM has become a mature conference and the main venue for researchers and practitioners in this area. We would like to thank the members of the Program Committee and the reviewers for their efforts in selecting the papers. They helped us compile an excellent scientific program. For the difficult task of selecting the 25 best papers (14% acceptance rate) and 17 short papers each paper was reviewed by at least three reviewers (except some out-of-scope papers).

Modernes Immobilienmanagement

Das Buch behandelt erstmalig in einem

geschlossenen Konzept alle Aufgaben der immobilienwirtschaftlichen Wertschöpfungskette aus den Perspektiven der Nutzer, Eigentümer und Betreiber von Gewerbeimmobilien. Es wird gezeigt, wie mit Hilfe betriebswirtschaftlicher Methoden Optimierungspotenziale für das Immobilieninvestmentmanagement, das Asset- und Property Management, das Corporate Real Estate Management sowie das Facility Management ausgeschöpft werden können. Behandelt werden insbesondere aktuelle Aspekte von Sourcing-Entscheidungen, des Portfoliomanagements, des Immobiliencontrollings und der Immobilienfinanzierung. Das Buch zeigt verschiedene Alternativen von Organisationskonzepten immobilienwirtschaftlicher Aufgaben konkret auf und bewertet diese. Die dritte Auflage wurde überarbeitet, erheblich erweitert und aktualisiert. Durch eine stärkere Betonung des Property und Facility Managements einerseits und des Real Estate Investment und Asset Managements andererseits wird den aktuellsten Entwicklungen bei Immobilieninvestoren und -dienstleistern Rechnung getragen.

Work practices and organizational processes vary widely and evolve constantly. The technological infrastructure has to follow, allowing or even supporting these changes. Traditional approaches to software engineering reach their limits whenever the full spectrum of user requirements cannot be anticipated or the frequency of changes makes software reengineering cycles too clumsy to address all the needs of a specific field of application. Moreover, the increasing importance of 'infrastructural' aspects, particularly the mutual dependencies between technologies, usages, and domain competencies, calls for a differentiation of roles beyond the classical user–designer dichotomy. End user development (EUD) addresses these issues by offering lightweight, use-time support which allows users to configure, adapt, and evolve their software by themselves. EUD is understood as a set of methods, techniques, and tools that allow users of software systems who are acting as non-professional software developers to 1 create, modify, or extend a software artifact. While programming activities by non-professional actors are an essential focus, EUD also investigates related activities such as collective understanding and sense-making of use problems and solutions, the interaction among end users with regard to the introduction and diffusion of new configurations, or delegation patterns that may also partly involve professional designers.
