Migrating to SAP S/4HANA
Springer Science & Business Media

SAP is a market leader in enterprise business application software. SAP solutions provide a rich set of composable application modules, and configurable functional capabilities that are expected

from a comprehensive enterprise business application software suite. In most cases, companies that adopt SAP software remain heterogeneous enterprises running both SAP and non-SAP systems to support their business processes. Regardless of the specific scenario, in heterogeneous enterprises most SAP implementations must be integrated with a variety of non-SAP enterprise systems: Portals Messaging infrastructure Business process management (BPM) tools Enterprise Content Management (ECM) methods and tools Business analytics (BA) and business intelligence (BI) technologies Security Systems of record Systems of engagement The tooling included with SAP software addresses many needs for creating SAP-centric environments. However, the classic approach to implementing SAP functionality generally leaves the business with a rigid solution that is difficult and expensive to change and enhance. When SAP software is used in a large, heterogeneous enterprise environment, SAP clients face the

dilemma of selecting the correct set of tools and platforms to implement SAP functionality, and to integrate the SAP solutions with non-SAP systems. This IBM® Redbooks® publication explains the value of integrating IBM software with SAP solutions. It describes how to enhance and extend pre-built capabilities in SAP software with best-in-class IBM enterprise software, enabling clients to maximize return on investment (ROI) in their SAP investment and achieve a balanced enterprise architecture approach. This book describes IBM Reference Architecture for SAP, a prescriptive blueprint for using IBM software in SAP solutions. The reference architecture is focused on defining the use of IBM software with SAP, and is not intended to address the internal aspects of SAP components. The chapters of this book provide a specific reference architecture for many of the architectural domains that are each important for a large enterprise to establish common strategy, efficiency, and balance. The majority of the most

important architectural domain topics, such as integration, process optimization, master data management, mobile access, Enterprise Content Management, business intelligence, DevOps, security, systems monitoring, and so on, are covered in the book. However, there are several other architectural domains which are not included in the book. This is not to imply that these other architectural domains are not important or are less important, or that IBM does not offer a solution to address them. It is only reflective of time constraints, available resources, and the complexity of assembling a book on an extremely broad topic. Although more content could have been added, the authors feel confident that the scope of architectural material that has been included should provide organizations with a fantastic head start in defining their own enterprise reference architecture for many of the important architectural domains, and it is hoped that this book provides great value to those reading it. This IBM Redbooks publication

is targeted to the following audiences: Client decision makers and solution architects leading enterprise transformation projects and wanting to gain further insight so that they can benefit from the integration of IBM software in large-scale SAP projects. IT architects and consultants integrating IBM technology with SAP solutions. Sams Teach Yourself SAP in 24 Hours Packt Publishing Ltd This book constitutes the proceedings of the 4th EuroSymposium on Systems Analysis and Design, SIGSAND/PLAIS 2011, held in Gdańsk, Poland, in September 2011. The objective of this symposium is to promote and develop high-quality research on all issues related to systems analysis and design (SAND). It provides a forum for SAND researchers and practitioners in Europe and beyond to interact, collaborate, and develop their field. The 9 papers were carefully reviewed and selected

from 20 submissions. An additional revision took place after the conference to incorporate discussion results from the presentation. The contributions are organized into topical sections on business process modeling, integrated systems development, and software development.

SAP in 24 Hours, Sams Teach Yourself Pearson Education

The book describes the complete project process in individual steps for SAP S/4HANA project management based on the SAP ACTIVATE implementation methodology.

By imparting knowledge based on experience with real SAP

projects, the book supports project managers in developing skills and qualifications that will lead them to the successful management of SAP projects.

In this context it emphasizes the crucial role of human interaction from the start to the successful completion of projects and provides useful tips on how to recognize and avoid pitfalls. Enriched with a wide range of material such as templates, checklists and practical examples, the book provides concrete guidance for project managers and participants on how to successfully manage ongoing projects. The book is valuable for both beginners and experienced project managers and also gives decision makers and stakeholders an excellent insight into the planning and management of large projects. SAP BW Certification Jones & Bartlett Learning Services are widely used by people practically in all

aspects of life. The globalised era is seeing services being used by a wide cross-section of society from the corporate to the man. The Fourth Edition of the book educates its readers about how marketing strategies are changing and evolving through times. The new edition comes with updated case studies on various service sectors, such as Hospitality and Tourism (Thomas Cook, Karnataka State Tourism Development Corporation (KSTDC) Ltd., and (Cafe Coffee Day). A new case study “ Indian Airline Industry ” , has also been introduced to add to the diversity of services. Finance (Credit Card Business of Standard Chartered) and Information Technology are also updated (Infosys and SAP). The cases, set within the Indian context,

lend a practical dimension to the subject, familiarizing the students with the developments in the Services Marketing area in India. The new edition, with its emphasis on recent data and the contemporary Services Marketing scenario, is an ideal companion for the budding managers. It should also be of great use to the practising managers attending various Management Development Programmes (MDPs) and Executive Development Programmes (EDPs). New to this edition

- A new case study “ Indian Airline Industry ” has been introduced.
- All case studies of the previous edition have been updated with latest information and developments in the company.
- Chapter 2 and Chapter 15 of the book have

been revised with latest data
and illustrations.
