In this IBM® Redbooks® publication, we give an overview of different data management topics related to a typical SAP® data center. The intrinsic functionality of SAP is not designed to completely handle all the tasks of a data center by itself, but the SAP system offers several interface possibilities to attach external tools to it to accomplish this task We explain SAP basic concepts and the issues with SAP data management. We introduce Tivoli® Storage Manager and all of its products that are related to SAP data management. We provide some comparison between database backup and recovery tools. Finally, we discuss data

archiving using IBM DB2® CommonStore for SAP, and discuss high availability requirements and disaster recovery considerations. The second part of this book discusses a practical implementation of SAP backup and recovery with Tivoli Storage Manager. We implement this setup on two separate SAP systems: one running DB2 and the other running Oracle® database. We also implement LAN-free backup and FlashCopy® scenarios. In the sample implementation section, we show many different tasks, such as backup and restore, database recovery, backup monitoring, and tuning. We also cover some advanced backup/availability considerations, such as split mirror backup and standby databases. This book helps individuals that operate an SAP environment to devise a strategy for a sound and comprehensive data backup solution using the IBM Tivoli Storage Management product family.

Mit der Version 7.1 erweitert SAP den SAP Solution Manager mit einigen Funktionen in den Bereichen Testmanagement und Testautomatisierung. Besonders interessant sind die Testwerkzeuge der Testautomatisierung, da das SAP-eigene Testautomatisierungs-Tool eCATT die neuen SAP-Benutzeroberflächen mit unterschiedlichen Technologien nicht unterstützt und somit für das Testen von Geschäftsprozessen nicht geeignet ist. Um diese Lücke zu schließen, wurden verschiedene Drittanwendungen integriert. In diesem Buch wird auf die Möglichkeiten der Testautomatisierung, die sich durch das Upgrade im SAP Solution Manager 7.1 ergeben, eingegangen. Hierzu werden die Werkzeuge eCATT und HP QTP (Drittanwendung) ausführlich untersucht und deren Stärken und Schwächen in der Automatisierung von technologieübergreifenden

Geschäftsprozessen aufgezeigt.
