Using SAP SAP Press

SAP is a powerful software that meets the requirement of business all  
over the world. This well-organised book comprising 34 chapters is  
useful for both beginners and professionals. Being a learning guide  
and a user manual, the book will be immensely valuable for all those  
who are training to be SAP consultant. If you are a  
material/production manager, a QM professional or a business  
executive, you will find that the book brings a lot of convenience in  
your work and minimises inventory losses. A New Approach to SAP  
Implementation Structured dialog :The dialog between the  
consultant and the users should be based on the structure of this  
book. The consultant would demonstrate a business transaction, e.g.  
goods receipt, in its simplest form. He would then explain the data  
items on the screens, their meaning and significance. He would  
enquire whether the data item is relevant for the client company. The  
data items that are not relevant can be hidden in the implementation,  
and related configuration marked as not required. When the  
consultant would come to a section explaining IMG node, his  
questions to the user would be designed to collect the information  
required to configure that node. Prototyping :As the structured

dialog continues, the consultant would go on doing the configuration. By the end of the dialog, the consultant would have built a company-specific prototype. Training and trials :The prototype would be a rough-cut implementation of SAP for the company. It would be used for training the users. After training, the users would try out the system. They would perform routine transactions several times using real-life data of their company. They would try different scenarios and record their observations. Refinement :After prototype trials, the consultant and the users would sit together to discuss what the users required to do, but could not do with the prototype. The consultant would use this input to refine the prototype and to build new functionality, if needed. Configuration manual :The documentation of SAP implementation includes a configuration manual. This configuration manual should be structured on the lines of this book as explained in Chapter 34. Such a configuration manual will be easy to understand as it groups logically related elements together. User manual :This book will serve as a generic user manual. Company-specific user manual can also be structured on the lines of this book including only company-specific guidelines for the users.
