software to process their most mission-critical, highly sensitive data. With

more than 100,000 installations, SAP is the world's largest enterprise

software company and the world's third largest independent software

supplier overall. Despite this widespread use, there have been very few

books written on SAP implementation and security, despite a great deal of

interest. (There are 220,000 members in an on-line SAP 'community'

seeking information, ideas and tools on the IT Toolbox Website alone.)

Managing SAP user authentication and authorizations is becoming more

complex than ever, as there are more and more SAP products involved

that have very different access issues. It's a complex area that requires

focused expertise. This book is designed for these network and systems

administrator who deal with the complexity of having to make judgmental

decisions regarding enormously complicated and technical data in the

SAP landscape, as well as pay attention to new compliance rules and

security regulations. Most SAP users experience significant challenges
