FOCUS ON PERSONAL

FINANCE John Wiley & Sons

Financial Markets and Institutions is aimed at the first course in financial markets and institutions at both the undergraduate and MBA levels. While topics covered in this book are found in more advanced textbooks on financial markets and institutions, the explanations and illustrations are aimed at those

with little or no practical or academic experience beyond the introductory-level finance courses. In most chapters, the main relationships are presented by figures, graphs, and simple examples. The more complicated details and technical problems related to in-chapter discussion are provided in appendixes to the chapters. Since the author team's focus is on return and risk and the sources of that return and risk in domestic and foreign financial institutions, this

text relates ways in which a modern financial manager, saver, and investor can expand return with a managed level of risk to achieve the best, or most favorable, return-risk outcome.

Credit Risk Management In and Out of the Financial Crisis McGraw-Hill College Financial Markets and Institutions, 5e offers a unique analysis of the risks faced by investors and savers interacting through financial institutions and financial markets, as well as strategies that can be adopted for controlling and managing risks. Special emphasis is put on new areas of operations in financial markets and institutions such as asset securitization, off-balance-sheet activities, and

globalization of financial services. Connect is the only integrated learning system that empowers students by continuously adapting to deliver precisely what they need, when they need it, and how they need it, so that your class time is more engaging and effective.

Over the past several decades, as the pace of globalization has accelerated, operational issues of international coordination have often been overlooked. For example, the global financial crisis that began in 2007 is attributed, in part, to a lack of regulatory oversight. As a result, supranational organizations, such as the G-20, the World Bank, and the International Monetary Fund, have prioritized strengthening of the international financial architecture and providing opportunities for dialogue on national policies, international co-operation, and international financial institutions. Prevailing characteristics of the global economic systems, such as the increasing power of financial institutions, changes in the structure of global production, decline in the authority of nation-states

over their national economy, and creation of global institutional setting, e.g., global governance have created the conditions for a naturally evolving process towards enabling national epistemic communities to create institutions that comply with global rules and regulations can control crises. In this context, transfer of technical knowledge from the larger organizations and its global epistemic communities to member communities is becoming a policy tool to “convince” participants in the international system to have similar ideas about which rules will govern their mutual participation. In the realm of finance and banking regulation, the primary focus is on transfer of specialized and procedural knowledge in technical domains (such as accounting procedures, payment systems, and corporate governance principles), thereby promoting institutional learning at national and local levels. In this volume, the authors provide in-depth analysis of initiatives to demonstrate how this type of knowledge generated at the international organization level, is codified into global standards, and disseminated to members, particularly in the developing world, where the legal and regulatory

infrastructure is often lacking. They argue that despite the challenges, when a country intends to join the global system, its institutions and economic structures need to move toward the global norms. In so doing, they shed new light on the dynamics of knowledge transfer, financial regulation, economic development, with particular respect to supporting global standards and avoiding future crises. *Understanding Market, Credit, and Operational Risk* Springer Science & Business Media

Counter This text focuses on the risks faced by managers of financial institutions and the methods and markets through which these risks are managed. Pertinent information regarding non-bank financial institutions, such as insurance companies and credit unions, provides a more holistic view of the challenges raised by factors such as interest rates, market risk, credit risk, and liquidity risk, among others. The highly regarded text continues to take the same

innovative approach as the first, and second editions, focusing on managing return and risk in modern financial institutions. The books central theme is that the risks faced by financial institution managers, and the methods and markets, through which these risks are managed, are becoming increasingly similar. It has become less of issue whether the institution is chartered as a commercial bank, a savings bank, investment bank, or an insurance company. This edition includes even more coverage of non-bank institutions by adding more examples relating to credit unions and insurance companies. The objective of Off-

Balance Sheet Activities is to gain insights into, and propose meaningful solutions to, those issues raised by the current proliferation of off-balance sheet transactions. The book has its origins in a New York University conference that focused on this topic. Jointly undertaken by the Vincent C. Ross Institute of Accounting Research and New York University's Salomon Center for the study of Financial Institutions at the Stern School of Business, the conference brought together academic researchers and practitioners in the field of accounting and finance to address the issues with the broad-mindedness requisite of a group whose approaches to solutions are as different from each other as their respectively theoretical and applied approaches to the disciplines of finance and accounting. The essays are divided into two sections. The first covers issues surrounding OBS activities and banking and begins with a brief introduction that places the essays into context. OBS activities and the underinvestment problem, whether loan sales are really OBS, and money demand and OBS liquidity are examined in detail. Section two, which also begins with a brief introduction, focuses on

issues of securitized assets and financing. A report on recognition and measurement issues in accounting for securitized assets is followed by three separate discussion essays. Other subjects covered include contract theoretic analysis of OBS financing, the use of OBS financing to circumvent financial covenant restrictions, and debt contracting and financial contracting. The latter two contributions are also followed by discussion essays. This unique collection of papers will prove to be an interesting and valuable tool for accounting and finance professionals as well as for academics involved in these fields. It will also be an important addition to public, college, and university libraries.

Institutional Learning and Knowledge Transfer Across Epistemic Communities John Wiley & Sons

The aim of this paper is twofold: first, to study the determinants of banks' net interest margin with a particular focus on the role of maturity transformation, using a new measure of maturity mismatch; second, to analyse the implications for banks from the relaxation of a binding prudential limit on maturity mismatch, in place in Italy until mid-2000s. The results show that maturity transformation is a relevant

driver of the net interest margin, as higher maturity transformation is typically associated with higher net interest margin. However, 'excessive' maturity transformation— even without leading to systemic vulnerabilities— increases banks' interest rate risk exposure and lowers their net interest margin.
