Mastering Nikon Speedlights is the most comprehensive guide available for anyone using or wanting to learn more about the Nikon Creative Lighting System (CLS). Starting with an exploration of how to work with light, the book teaches you everything you need to know about understanding the direction and intensity of light, using light meters and metering modes, controlling exposure, and much more. You'll learn the specifics of how to use the full range of Nikon Speedlights and accessories, including past and current models of cameras and CLS compatible flashes—and in the process you'll find out how to get the best shots with your gear, whether you have a whole box of equipment or just the basics. The book includes practical, real-world photo shoots—portraits, action shots, and product photography—starting with one light and gradually working up to multiple lights so you can observe the progression of the light from one flash to many. No matter what your subject or shooting scenario, Mastering Nikon Speedlights is an essential resource that teaches you how to produce the light you need to achieve great results. Offers a thorough discussion of the qualities of light, how the camera

measures light, and the settings needed to record an image with proper exposure Provides a complete overview of all the components that make up the Nikon Creative Lighting System, outlining how to use the different Speedlights and accessories to correspond with each camera's unique capabilities Covers how to use the Nikon Speedlights off the camera using the Advanced Wireless Lighting (AWL) features built into the Creative Lighting System Features several examples of real photo shoots, showing you how to take great photos in a variety of situations, building from one flash up to multiple flashes

In 2009, photographer Dustin Diaz began a “365 project,” the goal of which is to shoot and share one picture per day for a year. Not only did Diaz actually complete the project – an achievement in and of itself – he consistently shared both the final image and the behind-the-scenes setup shot for that image, allowing the viewer to see how the shot was arranged. He also included information about exposure, flash power, distance, and light modifiers. The project was a huge hit that attracted thousands of followers. This *Is Strobist® Info* recreates and expands upon this approach by featuring an image alongside a setup shot that helpfully explains how that image was created. By showing the finished pictures as well as the setup shots for 50 of Diaz's images, you'll gain tons of knowledge about the basics – and beyond – of flash photography, including everything from simple one-light shots to images created with five lights and numerous gels, clamps, umbrellas, softboxes, and grids. Additionally, This *Is Strobist® Info* includes two chapters that guide you through the basics of starting your own lighting kit and explain the important but

often-misunderstood inverse square law.

A full-color, go-anywhere guide to Nikon's entire array of creative lighting possibilities Nikon's Creative Lighting System is like having a low-cost, wireless, studio lighting system that's portable enough to fit into a camera bag. Although the possibilities are endless and exciting, setting up, synchronizing the equipment, and determining lighting ratios can be a bit overwhelming. Luckily, this Digital Field Guide has been completely updated to shed some light on the situation! Beginning with the basic functions of the Nikon SB-900, the SB-800, and the SB-600, the author then goes on to demystify the complexities of using multiple speedlights, adjusting flash outputs, and setting up a wireless studio. Clearly explains how to get the best results when using multiple speedlights Includes examples and unique advice on how to light specific subjects, such as weddings, wildlife, portraits, product shots, and corporate locations Covers other Creative Lighting System components, such as Nikon's wireless commander and macro speedlights With this handy, on-the-go guide, you'll no longer be in the dark on Nikon's Creative Lighting System.

An award-winning scientist offers his unorthodox approach to childrearing: "Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions" (Amy Chua, author of

Battle Hymn of the Tiger Mother). If you're like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In Parentology, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley's sassy kids show him the limits of his profession. Parentology teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You'll be laughing and learning at the same time.

Following up on the great success of The Moment It Clicks and The Hot Shoe Diaries: Big Light from Small Flashes, legendary magazine photographer Joe

---

McNally takes us on another memorable ride with Sketching Light, another trip into the land of light--but this time running the gamut from small flash to big flash, and everywhere in between. Of course, Joe includes coverage of Nikon Speedlights, but he also covers big flash, as well as "in-between" lights as the Elinchrom Quadra. The exploration of new technology, as well as the explanation of older technology. No matter what equipment Joe uses and discusses, the most important element of Joe's instruction is that it is straightforward, complete, and honest. No secrets are held back, and the principles he talks about apply generally to the shaping and quality of light, not just to an individual model or brand of flash. He tells readers what works and what doesn't via his let's-see-what-happens approach, he shows how he sets up his shots with plentiful sketches and behind-the-scenes production shots, and he does it all with the intelligence, clarity, and wisdom that can only come from shooting in the field for 30 years for the likes of National Geographic, Time, Life, and Sports Illustrated--not to mention the wit and humor of a clearly warped (if gifted) mind.

The most important aspect of capturing a quality image isn't the camera you use, the aperture settings, the shutter speed, or the ISO--it's the light. With this ebook, you will learn how to enhance the light in your images by using the Nikon Creative Lighting System (CLS), which allows you to

easily take great photos with natural-looking light using a flash either on or off camera. You'll learn how to wirelessly control the amount of light of the remote flashes right from the camera, control an unlimited number of flashes, and use the flashes in up to three different controllable groups. If you have a relatively recent model of a higher-end consumer Nikon camera and a Speedlight, chances are you are ready to go! Follow along with Alan and you will: Learn your way around all the components of the CLS system, including cameras, flashes, and flash accessories Develop an understanding of flash photography and learn the basics of getting the best results using Basic Flash, Fill Flash, and Sync Modes Master the mechanics of setting up multiple flashes to build up the light in an image Explore advanced flash setups, learning to control an unlimited number of remote flashes, and work with more complex lighting setups

Crime Scene Photography is a book wrought from years of experience, with material carefully

selected for ease of use and effectiveness in training, and field tested by the author in his role as a Forensic Services Supervisor for the Baltimore County Police Department. While there are many books on non-forensic photography, none of them adequately adapt standard image-taking to crime scene photography. The forensic photographer, or more specifically the crime scene photographer, must know how to create an acceptable image that is capable of withstanding challenges in court. This book blends the practical functions of crime scene processing with theories of photography to guide the reader in acquiring the skills, knowledge and ability to render reliable evidence. Required reading by the IAI Crime Scene Certification Board for all levels of certification Contains over 500 photographs Covers the concepts and principles of photography as well as the "how to" of creating a final product Includes end-of-chapter exercises

Providing readers with a study of learning how to turn poorly lit images into finely crafted, masterfully lit photographs, this guidebook instills photographers with the self-confidence to think on their feet and photograph any portrait subject anywhere. Acclaimed photographer Neil van Niekirk presents seven distinctly different lighting scenarios—available light, exposure metering, a touch of flash, bounced on-camera flash, off-camera flash, video light, and hard sunlight—to show readers how to manipulate the direction and quality of light, the subject's and photographer's position, and numerous other variables so as to turn a bad image into a stunning, professional-level portrait. Packed with dozens of instructional, full-color photos, this work also features 10 sample photo sessions, allowing readers the opportunity to see the seven lighting scenarios put to practice.

The core goal of photography is representing

that inherently lacks both those qualities, and this book shows the best way to rise to that challenge: through the careful application and capture of lighting. It demonstrates how to accentuate or minimize textures, add or subtract highlights, and create or combat shadows to showcase the subjects in the best way and create the illusion of a third dimension in the images. Exploring techniques for lighting portraits, still-life subjects, nature images, and architectural shots, both studio and location lighting are covered in detail. The book teaches photographers how to study their subjects—  
with all of the textures, colors, shapes, and surfaces they have—then visualize the image as a finished photograph before the photography actually begins. With chapters that thoroughly cover the science of lighting and visualization, photographers can apply that knowledge and successfully create artful images.

*An Introduction to the Nikon Creative Lighting System* Peachpit Press

From a master of professional photography, a book that explores the exciting possibilities of artificial light. This guide to on- and off-camera flash picks up where Peterson's previous title, *Understanding Exposure*, left off--helping free photographers from the limitations of auto to get the images they want when natural light isn't enough. For the many amateur photographers afraid to venture past natural lighting, here is the book that will finally help them master artificial light. In his trademark easy-to-understand style, Bryan Peterson explains not only how flash works, but how to go beyond TTL automatic flash exposure to master manual flash, allowing readers to control the quality, shape and direction of light for a perfect exposure, every time.
