Human Development and Interaction in the Age of Ubiquitous Technology SAGE Publications  
Real Language Series General Editors- Jennifer Coates, Jenny Cheshire and Euan Reid This is a sociolinguistic series about the relationships between language, society and social change. Books in the series draw on natural language data from a wide range of social contexts. The series takes a critical approach to the subject, challenging current orthodoxies, and dealing with familiar topics in new ways. The topic of plagiarism is a highly contentious issue and one that is of

growing interest and importance in higher education across the world. Stolen Language? Plagiarism in Writing uncovers the reasons why students plagiarize, and explains what can be done about it. It challenges the concepts of original authorship of language, tracing the notion of plagiarism to the introduction of copyright laws in the eighteenth century. The analysis presented in this book explores plagiarism as complex and contested, and suggests that in student academic writing it may be the surface manifestation of learning difficulties related to the educational environment, the nature of academic discourse and the nature of language. Underlying the concept of plagiarism is the premise that meaning is made by the individual, using the system of language at his or her disposal. The words and ideas then belong to the individual who first thought of them, or who first used these words in a particular way. New understandings, that language and cognition are fundamentally social and cultural, contest the idea of 'original thought' or 'original language'. In addition, what constitutes plagiarism differs depending on the genre and context of

---

writing. *Stolen Language* shows that there is in any good writing an authorial presence, an authorial voice which is particularly difficult for the novice writer to control when constructing an essay based on multiple texts. Written in a unique and accessible way, the book also looks at the particular difficulties experienced by writers of English as an additional language and provides a practical framework for academics and teachers of writing on how to develop authorial voice and critical thinking in the student writer.

This textbook introduces the general points of view of research methodology in the scientific and engineering fields of studies and presents an overview of the technical and professional communication needed for article publication in journals. It comprises several practice exercises that will give beginners the confidence to move on the communicative activities. Every chapter provides problem sets that will help readers check their understanding of each concept. The book will also help readers formulate specific research topics, research questions, and hypotheses; conduct literature reviews relevant to the research topics; develop applicable research methodologies; and write and present their research outlining the key elements of the proposed projects. It is very useful for students and researchers opting for a course on research methodology and for seminars at undergraduate and graduate levels.

*Cultures in Contrast* is designed for students who are entering college or university life in the 21st century. It provides challenging readings and comprehension

questions in every unit, accompanied by updated suggested films and additional readings. In each unit, students move from a general exploration of their beliefs to an analysis of a case study, a discussion of readings, and finally a specific choice of a coping strategy for a hypothetical dilemma. The case studies and readings, while providing various perspectives on life in the United States, are also meant to strengthen students' cultural self-awareness. The second edition features a new unit on binge drinking, which has been added to recognize one of the most serious problems on college campuses today. Today, more than ever, students on college campuses are expected to have a sensitivity to and respect for diversity as well as a heightened awareness of individual rights and responsibilities. This text attempts to prepare students for this academic environment. *Cultures in Contrast* offers these students a means for analyzing and evaluating the complex social and moral issues that young adults throughout the world have to deal with.

published work, and advice for those seeking to publish their articles or books. A chapter by the attorney Arthur F. Abelman reviews legal issues, such as copyright law, the concept of fair use, the provisions of a typical publishing contract, defamation, and the emergence of privacy law. Other chapters discuss stylistic conventions and the preparation of manuscripts, theses, and dissertations and offer an authoritative and comprehensive presentation of MLA documentation style.

Research is defined as "the creation of new knowledge and/or the use of existing knowledge in a new and creative way so as to generate new concepts, methodologies and understandings. Research is not only to develop the process or to find a formula as we do in the science. But in the field of social science the research work is oriented towards the solution of a problem or to seek an answer of a question. The first step of a research process is to identify a problem. The selection of a problem is governed by reflective thinking. Unthinking activity is governed too completely by tradition or by emotion. Primitive life was largely without effective reflective thought, until some intelligent individual conceived of a new solution for an old problem. Therefore, upper educational groups ever do much careful ordered thinking. The normal human mind thinking may be classified into four categories: convergent, divergent reflective and scientific thinking. In reflective thinking individual conceived for a new solution for an old problem, but scientific thinking is in terms of carefully organized

reflection.

*Psychological and Pedagogical Considerations in Digital Textbook Use and Development* Springer  
Plagiarism takes an in-depth look at the history of plagiarism in higher education in light of today's Web-based plagiarism detection services. Challenging the widespread assumption that plagiarism is a simple matter of student cheating or scriptural error, Bill Marsh argues that today's teachers and educational institutions may be cheating themselves and their students in pursuing quick-fix solutions to the so-called epidemic of student plagiarism. When students submit papers cribbed from materials found on the Web or purchase research papers from Internet paper mills, these acts of sedition must also be recognized, for better or worse, as examples of new-media composition techniques. Examining Web-based plagiarism detection services and software such as Glatt, EVE, Plagiarism-Finder, and Turnitin.com, Marsh contends that these services regulate writing and reading practices in ways consistent with precomputer, even preindustrial, efforts to manage and refine human behavior. As he weaves together print history, education, rhetoric, and communication theory, Marsh shows that the rules governing plagiarism and the proper use of borrowed materials have their origins in early intellectual property law, in the reading practices of twelfth-century monks, and the precepts of medieval alchemy. Through an examination of these prescholastic models, this book calls for a revised

approach to academic writing in computer-mediated environments.

Beat burnout with time-saving best practices for feedback For ELA teachers, the danger of burnout is all too real. Inundated with seemingly insurmountable piles of papers to read, respond to, and grade, many teachers often find themselves struggling to balance differentiated, individualized feedback with the one resource they are already overextended on-time. Matthew Johnson offers classroom-tested solutions that not only alleviate the feedback-burnout cycle, but also lead to significant growth for students. These time-saving strategies built on best practices for feedback help to improve relationships, ignite motivation, and increase student ownership of learning. Flash Feedback also takes teachers to the next level of strategic feedback by sharing: How to craft effective, efficient, and more memorable feedback Strategies for scaffolding students through the meta-cognitive work necessary for real revision A plan for how to create a culture of feedback, including lessons for how to train students in meaningful peer response Downloadable online tools for teacher and student use Moving beyond the theory of working smarter, not harder, Flash Feedback works deeper by developing practices

for teacher efficiency that also boost effectiveness by increasing students' self-efficacy, improving the clarity of our messages, and ultimately creating a classroom centered around meaningful feedback.

### Research Methodology and Scientific Writing

This is an open access book. As on date, huge volumes of data are being generated through sensors, satellites, and simulators. Modern research on data analytics and its applications reveal that several algorithms are being designed and developed to process these datasets, either through the use of sequential and parallel processes. In the current scenario of Industry 4.0, data analytics, artificial intelligence and machine learning are being used to support decisions in space and time. Further, the availability of Graphical Processing Units (GPUs) and Tensor Processing Units (TPUs) have enabled to processing of these datasets. Some of the applications of Artificial Intelligence, Machine Learning and Data Analytics are in the domains of Agriculture, Climate Change, Disaster Prediction, Automation in Manufacturing, Intelligent Transportation Systems, Health

Care, Retail, Stock Market, Fashion Design, etc. The international conference on Applications of Machine Intelligence and Data Analytics aims to bring together faculty members, researchers, scientists, and industry people on a common platform to exchange ideas, algorithms, knowledge based on processing hardware and their respective application programming interfaces (APIs).

Today's tech-savvy and digitally connected students present a new challenge for today's school librarians. This book offers the 21st-century tools and know-how necessary for educators to appeal to and challenge students to learn—and to want to learn. What are the best ways to motivate students to become engaged and develop a passion for learning? Can appealing to their desire for socialization and constant communication—attributes of their lives outside of education—via the integration of cutting-edge technologies and "new

media" in the library or classroom serve to ignite creativity, curiosity, and critical thinking? This book shows how you can make use of non-traditional tools such as popular social networks, collaborative technologies, and cloud computing to teach information and communications technologies integrated with the school curriculum to improve student learning—and demonstrates how these same technologies can help you measure skills and mastery learning. The book provides an easy-to-follow blueprint for using collaborative techniques, innovation, and teaching for creativity to achieve the new learning paradigm of self-directed learning, such as flipping the classroom or library. Readers of this book will find concrete, step-by-step examples of proven lesson plans, collaborative models, and time-saving strategies for the successful integration of American Association of School Librarians (AASL) standards. The authors—both award-winning teachers—explain the quantitatively and qualitatively measurable educational value of using these technologies for core curricular and information and communications technologies instruction, showing that they both enhance student learning outcomes and provide data for measuring their impact on learning.

*Library Plagiarism Policies*

Bloomsbury Publishing USA

Plagiarism is a problem with far-reaching consequences for the sciences. However, even today's best software-based systems can only reliably identify copy & paste plagiarism.

Disguised plagiarism forms, including

paraphrased text, cross-language plagiarism, as well as structural and idea plagiarism often remain undetected. This weakness of current systems results in a large percentage of scientific plagiarism going undetected. Bela Gipp provides an overview of the state-of-the art in plagiarism detection and an analysis of why these approaches fail to detect disguised plagiarism forms. The author proposes Citation-based Plagiarism Detection to address this shortcoming. Unlike character-based approaches, this approach does not rely on text comparisons alone, but analyzes citation patterns within documents to form a language-independent "semantic fingerprint" for similarity assessment. The practicability of Citation-based Plagiarism Detection was proven by its capability to identify so-far non-machine detectable plagiarism in scientific publications.
