Sickle cell disease (SCD) is a genetic condition that affects approximately 100,000 people in the United States and millions more globally. Individuals with SCD endure the psychological and physiological toll of repetitive pain as well as side effects from the pain treatments they undergo. Some adults with SCD report reluctance to use health care services, unless as a last resort, due to the racism and discrimination they face in the health care system. Additionally, many aspects of SCD are inadequately studied, understood, and addressed. Addressing Sickle Cell Disease examines the epidemiology, health outcomes, genetic implications, and societal factors associated with SCD and sickle cell trait (SCT). This report explores the current guidelines and best practices for the care of patients with SCD and recommends priorities for programs, policies, and research. It also discusses limitations and opportunities for developing national SCD patient registries and surveillance systems, barriers in the healthcare sector associated with SCD and SCT, and the role of patient advocacy and community engagement groups.

Politics and Policy Making in Education Routledge  
In 2012, the WHO Regional Committee for Europe approved Health 2020 in two forms. This publication gives both. The shorter policy framework provides European politicians and policy-makers with Health 2020's main values and principles, and key strategic advice to support action for health and well-being. The longer policy framework and strategy give more detail in terms of evidence and practice. It has two strategic objectives, constructed around equity, gender and human rights and improved governance for health. It is aimed at those committed to improving health, well-being and health equity, in a way that is sensitive to each country's situation and political and organisational circumstances. It is a "living" guide to policies and strategies. Addressing these questions is as much a political as a scientific endeavour and Health 2020 puts strong emphasis on political commitment, as well as professional expertise and the engagement of civil society. Focused on "solutions", it offers practical and achievable, yet flexible, policy options capable politically of being successfully implemented in the individual context of each country.

When most people think of prison gangs, they think of chaotic bands of violent, racist thugs. Few people think of gangs as sophisticated organizations (often with elaborate written constitutions) that regulate the prison black market, adjudicate conflicts, and strategically balance the competing demands of inmates, gang members, and correctional officers. Yet as David Skarbek argues, gangs form to create order among outlaws, producing alternative governance institutions to facilitate illegal activity. He uses economics to explore the secret world of the convict culture, inmate hierarchy, and prison gang politics, and to explain why prison gangs form, how formal institutions affect them, and why they have a powerful influence over crime even beyond prison walls. The ramifications of his findings extend far beyond the seemingly irrational and often tragic society of captives. They also illuminate how social and political order can emerge in conditions where the traditional institutions of governance do not exist.

This book provides a much-needed sociological account of the social world of the English prison officer, making an original contribution to our understanding of the inner life of prisons in general and the working lives of prison officers in particular. As well as revealing how the job of the prison officer - and of the prison itself - is accomplished on a day-to-day basis, the book explores not only what prison officers do but also how they feel about their work. In focusing on how prison officers feel about their work this book makes a number of interesting revelations - about the essentially domestic nature of much of the work they do, about the degree of emotional labour invested in it and about the performance nature of many of the day-to-day interactions between officers and prisoners. Finally, the book follows the prison officer home after work, showing how the prison can spill over into their home lives and family relationships. Based on extensive ethnographic fieldwork in different types of prisons (including interviews with prison officers' wives and children as well as prison officers themselves), this book will be essential reading for all those with an interest in how prisons and organisations more generally operate in practice.

Operating Manual Oxford University Press

This book draws upon the expertise of academic researchers, urban planners and architects to explore the challenge of building the sustainable cities of the future. It addresses this challenge by considering current cities and those of the near future, and creates a picture of the sustainable city from the bottom up. Individual chapters cover topics such as transport, energy supply, sustainable urbanism and promoting social equality in large infrastructure projects. Real-world examples are presented to illustrate how systems thinking is used to integrate different components of a city so as to ensure that the whole is more sustainable than its parts. Written in an accessible style, this book is intended for general readers as much as it is for students and researchers interested in sustainable cities and related topics. It is also ideal for urban planners seeking best-practice guidelines for sustainable urban development.
