The Zones of Regulation Corwin Press

A groundbreaking approach to understanding and parenting children who frequently exhibit severe fits of temper and other intractable behaviors, from a distinguished clinician and pioneer in this field. What's an explosive child? A child who responds to routine problems with extreme frustration--crying, screaming, swearing, kicking, hitting, biting, spitting, destroying property, and worse. A child whose frequent, severe outbursts leave his or her parents feeling frustrated, scared, worried, and desperate for help. Most of these parents have tried everything-reasoning, explaining, punishing, sticker charts, therapy, medication--but to no avail. They can't figure out why their child acts the way he or she does; they wonder why the strategies that work for other kids don't work for theirs; and they don't know what to do instead. Dr. Ross Greene, a distinguished clinician and pioneer in the treatment of kids with social, emotional, and behavioral challenges, has worked with thousands of explosive children, and he has good news: these kids aren't attention-seeking, manipulative, or unmotivated, and their parents aren't passive, permissive pushovers. Rather, explosive kids are lacking some crucial skills in the domains of flexibility/adaptability, frustration tolerance, and problem solving, and they require a different approach to parenting. Throughout this compassionate, insightful, and practical book, Dr. Greene provides a new conceptual framework for understanding their difficulties, based on research in the neurosciences. He explains why traditional parenting and treatment often don't work with these children, and he describes what to do instead. Instead of

relying on rewarding and punishing, Dr. Greene's Collaborative Problem Solving model promotes working with explosive children to solve the problems that precipitate explosive episodes, and teaching these kids the skills they lack.

Positive Intelligence Harper Paperbacks

From the authors of The Whole-Brain Child and No-Drama Discipline, an indispensable guide to unlocking your child's innate capacity for resilience, compassion, and creativity. When facing contentious issues such as screen time, food choices, and bedtime, children often act out or shut down, responding with reactivity instead of receptivity. This is what New York Times bestselling authors Daniel J. Siegel and Tina Payne Bryson call a No Brain response. But our kids can be taught to approach life with openness and curiosity. When kids work from a Yes Brain, they're more willing to take chances and explore. They're more curious and imaginative. They're better at relationships and handling adversity. In The Yes Brain, the authors give parents skills, scripts, and activities to bring kids of all ages into the beneficial "yes" state. You'll learn • the four fundamentals of the Yes Brain—balance, resilience, insight, and empathy—and how to strengthen them • the key to knowing when kids need a gentle push out of a comfort zone vs. needing the "cushion" of safety and familiarity • strategies for navigating away from negative behavioral and emotional states (aggression and withdrawal) and expanding your child's capacity for positivity The Yes Brain is an essential tool for nurturing positive potential and keeping your child's inner spark glowing and growing strong. Let's Be Enemies Prentice Hall

"... a curriculum geared toward helping students gain skills in consciously regulating their actions, which in turn leads to increased control and problem solving abilities. Using a cognitive behavior approach, the curriculum's learning activities are designed to help students recognize when they are in different states called "zones," with each of four zones represented by a different color. In the activities, students also learn how to use strategies or tools to stay in a zone or move from one to another. Students explore calming techniques, cognitive strategies, and sensory supports so they will have a toolbox of methods to use to move between zones. To deepen students' understanding of how to self-regulate, the lessons set out to teach students these skills: how to read others' facial expressions and recognize a broader range of emotions, perspective about how others see and react to their behavior, insight into events that trigger their less regulated states, and when and how to use tools and problem solving skills. The curriculum's learning activities are presented in 18 lessons. To reinforce the concepts being taught, each lesson includes probing questions to discuss and instructions for one or more learning activities. Many lessons offer extension activities and ways to adapt the activity for individual student needs. The curriculum also includes worksheets, other handouts, and visuals to display and share. These can be photocopied from this book or printed from the accompanying CD."--Publisher's website.
