Scott Collins' GuitArchitecture method replaces the standard approach to learning guitar, rote memorization, with a simple, intuitive two-string approach that anyone can learn. This method, where players can actually see scales on a fingerboard, is called sonic visualization, and it can be applied to any scale or modal system. In this book of the GuitArchitecture series, "The GuitArchitect's Guide to Modes: Harmonic Combinatorics", Scott explains how to construct and analyze chords and how to create thousands of variations and progressions from a single chord using his unique visualization method. "Harmonic Combinatorics" is a vast harmonic and melodic resource for guitarists. With this approach, you can create an almost infinite number of unique melodic phrases and harmonic devices to compose or improvise your own music.
