The first textbook on the subject, this is a practical, clinically comprehensive guide to ethical issues in surgical practice, research, and education written by some of the most prominent figures in the fields of surgery and bioethics. Discussions of informed consent, confidentiality, and advance directives--core concepts integral to every surgeon-patient relationship--open the volume. Seven chapters tackle the ethical issues in surgical practice, covering the full range of surgical patients--from emergency, acute, high-risk, and elective patients, to poor surgical risk and dying patients. The book even considers the special relationship between the surgeon and patients who are family members or friends.

Chapters on surgical research and education address innovation, self-regulation in practice and research, and the prevention of unwarranted bias. Two chapters focus on the multidisciplinary nature of surgery, including the relationships between surgery and other medical specialties and the obligations of the surgeon to other members of the surgical team. The economic dimensions of surgery, especially within managed care, are addressed in chapters on the surgeons financial relationships with patients, conflicts of interest, and relationships with payers and institutions. The authors do not engage in abstract discussions of ethical theory; instead, their discussions are always directly relevant to the everyday concerns of practicing surgeons. This well-integrated volume is intended for practicing surgeons, medical educators, surgical residents, bioethicists, and medical students.

Tumor Board Review utilizes the knowledge and expertise of oncology specialists to enhance learning the practice of oncology. Each of the 32 chapters follows a uniform format: a concise summary of the epidemiology, risk factors, natural history, and pathology of each major organ-specific tumor type an abbreviated display of the relevant staging (generally based on the American Joint Commission on Cancer [AJCC] Staging, 7th Edition) and several "tumor board" style illustrative patient case summaries (representative of major stage categories of each tumor), each followed by an evidence-based case discussion which reviews the current guidelines and rationale for the diagnostic and therapeutic steps
