Oswal Publishers  
Now more than ever, as  
a worldwide STEM  
community, we need to  
know what pre-  
collegiate teachers  
and students explore,  
learn, and implement  
in relation to  
computer science and  
engineering education.  
As computer science

and engineering  
education are not  
always "stand-alone"  
courses in pre-  
collegiate schools, how  
are pre-collegiate  
teachers and students  
learning about these  
topics? How can these  
subjects be integrated?  
Explore six articles in  
this book that directly  
relate to the currently  
hot topics of computer  
science and engineering  
education as they tie  
into pre-collegiate  
science, technology,  
and mathematics realms.  
There is a systematic  
review article to set

the stage of the  
problem. Following this  
overview are two  
teacher-focused  
articles on  
professional  
development in computer  
science and  
entrepreneurship  
venture training. The  
final three articles  
focus on varying levels  
of student work  
including pre-  
collegiate secondary  
students' exploration  
of engineering design  
technology, future  
science teachers'  
(collegiate students)  
perceptions of

---

engineering, and pre-collegiate future engineers' exploration of environmental radioactivity. All six articles speak to computer science and engineering education in pre-collegiate forums, but blend into the collegiate world for a look at what all audiences can bring to the conversation about these topics.
