Middle grade students can learn a great deal about themselves and their world by reading informative texts in science courses. These texts will focus on important topics in earth science, life science, and physical science and shape students' understandings about scientific

inquiry, science-related processes and phenomenon, engineering and design, and technological innovations. But reading is a complex act, and most students need specific reading-related support to understand assigned texts in middle grade science courses. This book focuses on the cyclical nature of reading, the actions proficient readers engage in to understand science textbooks and other informational texts, and the instructional support that teachers can provide to enhance middle grade students' learning of science content through reading. Three associated questions will be addressed in this book:

- What actions do proficient readers engage in to understand assigned course texts?
- What do these actions entail, and how do they relate to each other?
- What teacher-mediated practices best support middle grade students' development as proficient readers and enhance their learning of course content through reading?

In 2014, The Urban Education Collaborative at the
University of North Carolina at Charlotte hosted its
first biennial International Conference on Urban
Education (ICUE) in Montego Bay, Jamaica. In 2016,
the second hosting of the conference took place in
San Juan, Puerto Rico. Additionally, in 2018, the
third hosting of the conference took place in Nassau,
Bahamas. These solution-focused conferences
brought together students, teachers, scholars, public
sector and business professionals as well as others
from around the world to present their research and
best practices on various topics pertaining to urban
education. With ICUE 's inspiration, this book is a
response to the growing need to highlight the
multifaceted aspects of urban education particularly
focusing on common issues and solutions in urban
environments (e.g., family and community
engagement, student academic achievement, teacher
preparation and professional development, targeted
instructional and disciplinary interventions,
opportunity gaps, culturally-relevant and sustaining
practices, etc.). Additionally, with this book, we seek
to better understand the challenges facing urban
educators and students and to offer progressive
initiatives toward resolutions. This unique
compilation of work is organized under four major
themes all targeted at critically addressing concerns
that may inhibit the success of urban learners and
providing solutions that have implications for
curriculum design, development, and delivery;
teacher preparation and teaching diverse populations;

career readiness and employment; and even more nuanced issues related to foster care, undocumented students and mental health, sustainable consumption, childhood marriage, food deserts, and marine life and urban communities.

The International conference series on Computer Science, Engineering & Applications (ICCSEA) aims to bring together researchers and practitioners from academia and industry to focus on understanding computer science, engineering and applications and to establish new collaborations in these areas. The Second International Conference on Computer Science, Engineering & Applications (ICCSEA-2012), held in Delhi, India, during May 25-27, 2012 attracted many local and international delegates, presenting a balanced mixture of intellect and research both from the East and from the West. Upon a strenuous peer-review process the best submissions were selected leading to an exciting, rich and a high quality technical conference program, which featured high-

impact presentations in the latest developments of various areas of computer science, engineering and applications research. Democracy and Education Pearson Prentice Hall

John Dewey's Democracy and Education addresses the challenge of providing quality public education in a democratic society. In this classic work Dewey calls for the complete renewal of public education, arguing for the fusion of vocational and contemplative studies in education and for the necessity of universal education for the advancement of self and society. First published in 1916, Democracy and Education is regarded as the

seminal work on public education by one of the most important scholars of the century.
