This should be the last course a student takes

before high school biology. Typically, we recommend that the student take this course during the same year that he or she is taking prealgebra. Exploring Creation With Physical Science provides a detailed introduction to the physical environment and some of the basic laws that make it work. The fairly broad scope of the book provides the student with a good understanding of the earth's atmosphere, hydrosphere, and lithosphere. It also covers details on weather, motion, Newton's Laws, gravity, the solar system, atomic structure, radiation, nuclear reactions, stars, and galaxies. The second edition of our physical science course has several features that enhance the value of the course: \* There is more color in this edition as compared to the previous edition, and many of the drawings that are in the first edition have been replaced by higher-quality drawings.

---

\* There are more experiments in this edition than there were in the previous one. In addition, some of the experiments that were in the previous edition have been changed to make them even more interesting and easy to perform. \* Advanced students who have the time and the ability for additional learning are directed to online resources that give them access to advanced subject matter. \* To aid the student in reviewing the course as a whole, there is an appendix that contains questions which cover the entire course. The solutions and tests manual has the answers to those questions. Because of the differences between the first and second editions, students in a group setting cannot use both. They must all have the same edition. A further description of the changes made to our second edition courses can be found in the sidebar on page 32.

Middle grade students can learn a great deal about themselves and their world by reading informative texts in science courses. These texts will focus on important topics in earth science, life science, and physical science and shape students '

understandings about scientific inquiry, science-related processes and phenomenon, engineering and design, and technological innovations. But reading is a complex act, and most students need specific reading-related support to understand assigned texts in middle grade science courses. This book focuses on the cyclical nature of reading, the actions proficient readers engage in to understand science textbooks and other informational texts, and the instructional support that teachers can provide to enhance middle grade students ' learning of science content through reading. Three associated questions will be addressed in this book:

- What actions do proficient readers engage in to understand assigned course texts?
- What do these actions entail, and how do they relate to each other?
- What teacher-mediated practices best support middle grade students ' development as proficient readers and enhance their learning of course content through reading?
