Phenotypic drug discovery has been highlighted in the past decade as an important strategy in the discovery of new medical entities. How many marketed drugs are derived from phenotypic screens? From the most recent examples, what were the factors enabling target identification and validation? This book answers these questions by elaborating on fundamental capabilities required for phenotypic drug discovery and using case studies to illustrate

approaches and key success factors. Written and edited by experienced practitioners from both industry and academia, this publication will equip researchers with a thought-provoking guide to the application and future development of contemporary phenotypic drug discovery for clinical success.

Academic Press

This book presents a unique approach to teaching the principles of health research using practical case studies with which nurses and midwives can engage to gain the skills to read and understand reports, evaluate the quality of research, synthesise different studies and be able to evaluate their effectiveness when applied to clinical practice. The book covers core concepts and principles, including the following: What evidence is and why understanding research is vital Finding reliable sources of evidence The nature of the research process Understanding

quantitative and qualitative research Ethical considerations Using research to guide clinical practice Throughout the book, activities, summaries and review questions help ground theory in real-life scenarios, showing how evidence-based practice can be applied in every aspect of nursing and midwifery care. It is designed for nurses and midwives, from those just beginning their studies to qualified practitioners undertaking their first research projects.

Argumentation in Science Education

Academic Press

Modern information and communication technologies, together with a cultural upheaval within the research

community, have profoundly changed research in nearly every aspect. Ranging from sharing and discussing ideas in social networks for scientists to new collaborative environments and novel publication formats, knowledge creation and dissemination as we know it is experiencing a vigorous shift towards increased transparency, collaboration and accessibility. Many assume that research workflows will change more in the next 20 years than they have in the last 200. This book provides researchers, decision

makers, and other scientific stakeholders with a snapshot of the basics, the tools, and the underlying visions that drive the current scientific (r)evolution, often called ‘Open Science.’

Global University Rankings explores the novel topic of global university rankings and their effects on higher education in Europe. The contributions in this volume outline different discourses on global university rankings and explore the related changes concerning European higher education policies, disciplinary traditions and higher education

institutions. The first global university rankings were published less than a decade ago, but these policy instruments have become highly influential in shaping the approaches and institutional realities of higher education. The rankings have portrayed European academic institutions in a varying light.

There is intense reflexivity over the figures, leading to ideational changes and institutional adaptation that take surprisingly similar forms in different European countries. The contributions in this book critically assess global university rankings as a policy discourse that would seem to be instrumental to higher education reform throughout Europe.

The Impact Factor of Scientific and Scholarly Journals

Springer Nature Impact communities are the places where individuals gather to contribute to the transformation of

their territories by disseminating knowledge. As such, it is vital to research the use of open and social learning in contributing to the evolution of impact communities and smart territories. Open and Social Learning in Impact Communities and Smart Territories is an essential reference source that discusses the learning processes in impact communities and in smart territories through case studies and other research methods. Featuring research on topics such as learning processes, smart communities, and social entrepreneurship, this book is ideally designed for entrepreneurs, managers,

academicians, and researchers seeking coverage on the concept of impact communities and smart territories. Universities under Neoliberalism Dr. Ghada Mohamed This book offers incredible insight into the history, objectives, and styles of the modern scientific research paper. *On Revision* Edward Elgar Publishing The trend of measuring performances is global and pervasive. We all live in quantified societies, in which performances in an ever-growing array of fields—from education to health, work to credit,

justice to consumption—are assessed and governed through quantitative techniques. While the disruption brought by the quantitative turn has been widely studied by social scientists, legal research on the issue is minimal. This book aims to fill the gap. The essays herein collected explore how performance measurements interact with the law in different regions and sectors, which legal effects they produce, and for whose benefit. **The Saga of Indian Science Since Independence** Rowman & Littlefield

This book is a full guidebook among more than 218 accounting international journals with an evaluation of 3,000 publications for over the last two years. It aims to help readers for selecting an appropriate journal for publishing own research in the international arena or to find the required topic for conducting further investigating or to be informed about so large-scale science as accounting. Here a reader will find detailed information about accounting journals in terms of Scopus, Web of Science and SCImago databases. In addition, there are highlighted accounting journals in terms of IFRS and blockchain concentration in accounting researches

nowadays. The relevant aims and scope of each journal are also presented. Anyway, this book is an indispensable assistant for students while getting the “Accounting” specialization, as well as teachers and scientists while conducting empirical researches in the practice and theory of the accounting filed. *Citation Analysis in Research Evaluation* SAGE Higher Education is in a state of ferment. People are seriously discussing whether the medieval ideal of the university as being excellent in all areas makes sense today, given the number of universities that we

have in the world. Student fees are changing the orientation of students to the system. The high rate of non repayment of fees in the UK is provoking difficult questions about whether the current system of funding makes sense. There are disputes about the ratio of research to teaching, and further discussions about the international delivery of courses. **Research Management** SAGE A trusted editor turns his attention to the most important part of writing: revision. So you’ve just finished writing something? Congratulations! Now revise it.

Because revision is about getting from good to better, and it's only finished when you decide to stop. But where to begin? In *On Revision*, William Germano shows authors how to take on the most critical stage of writing anything: rewriting it. For more than twenty years, thousands of writers have turned to Germano for his insider's take on navigating the world of publishing. A professor, author, and veteran of the book industry, Germano knows what editors want and what writers need to know: Revising is not just correcting typos. Revising is about listening and seeing again. Revising is a rethinking of the principles from the

ground up to understand why the writer is doing something, why they're going somewhere, and why they're taking the reader along with them. *On Revision* steps back to take in the big picture, showing authors how to hear their own writing voice and how to reread their work as if they didn't write it. *On Revision* will show you how to know when your writing is actually done—and, until it is, what you need to do to get it there.

researchers are bound to see this as a timely work. It brings together the work of leading experts in argumentation in science education. It presents research combining theoretical and empirical perspectives relevant for secondary science classrooms. Since the 1990s, argumentation studies have increased at a rapid pace, from stray papers to a wealth of research exploring ever more sophisticated issues. It is this fact that makes this volume so crucial.
