At 2:00am on October 2, 2001, Robert Stevens entered a hospital emergency room. Feverish, nauseated, and barely conscious, no one knew what was making him sick. It was the doctors and public health officials who solved this medical mystery. Stevens was the first fatal victim of bioterrorism in America. The events of September 11th and the anthrax attacks that followed only three weeks later were horrifying. Many of us felt we were living in a world gone mad. Already shaken by the images of jetliners

---

deliberately flown into the Twin Towers at the World Trade Center, we were soon scared to open our mail. No longer could we look forward to birthday wishes or holiday postcards. We couldn't even safely face the delivery of our monthly bills. We had now become literally afraid of the microbial menace that could be lurking in our mailboxes. This time terror had struck close to home "to everyone's home. But behind the panic and the politics was a key line of defense. While the police and FBI frantically investigated a crime, there were other professionals at work, conducting their own painstaking inquiry " medical and scientific detectives hot on the

trail of deadly organisms deliberately set loose in the postal system. Modern heroes in a quickly changing world, the public health officials, physicians, researchers, and scientists who staff our hospitals, clinics, and laboratories will be the first responders on the scene of any future biowarfare event. Conducting his own detective work, bioterrorism expert Leonard Cole has composed a series of fascinating stories that get to the heart of all the noisy sound bytes and hysterical headlines. Cole is the only person outside law enforcement to have interviewed every one of the surviving inhalation-anthrax victims, along with the relatives, friends, and associates of those who died, as well as the

public health officials, scientists, researchers, hospital workers, and treating physicians " indeed, anyone who has something of value to add to the story. Speaking through their voices, the narrative reflects the tension and emotions stirred by the events from the fall of 2001. Fast paced and riveting, this minute-by-minute chronicle of the anthrax attacks recounts more than a history of recent current events, it uncovers the untold and perhaps even more important story of how scientists, doctors, and researchers perform life-saving work under intense pressure and public scrutiny. The Anthrax Letters amply demonstrates how vulnerable America and the world really were in 2001. It also shows quite clearly

---

how scientific research promises to strengthen our ability to address the challenges we must meet in the future.

### **Level 1 Algebra Learning Workbook**

Prestwick House Inc

This is a short, easy-to-use introduction to SCILAB, a comprehensive software system. It contains brief explanations of Scilab commands, programming and graphing capabilities. This book is intended for beginning and experienced science and mathematics students.

Coverage

includes Scilab commands used in courses that involve calculus, linear algebra, differential equations, graphics and more.

And they have no idea how to invest, save, or handle their money. Young people today come out of school having had little or no formal education on the basics of money management. Many have large debts from student loans looming over their heads. And many feel confused and powerless when their pricey educations don't translate into high paying jobs. They feel that their \$30,000-\$40,000 salary is too meager to bother with investing, and they constantly fear that there will be "too much month left at the end of their money." Douglas R. Andrew has shown the parents of this generation a different pathway to financial freedom. Now Doug and his sons, Emron and Aaron - both of whom are in their mid-20s - show the under-30 crowd how they can break from traditional 401k investment plans and instead can find a better way by investing in real estate, budgeting effectively, avoiding unnecessary taxes and using life insurance to create tax-free income. With the principles outlined in Millionaire by Thirty, recent graduates will be earning enough interest

---

on their savings established to meet their basic living expenses by the time they're 30. And by the time they're 35, their investments will be earning more money than they are, guaranteeing them a happy, wealthy future. Walkermaths 1.2 A1 Success Books An Introduction to Knowledge Engineering presents a simple but detailed explanation of current and

work in the field of knowledge-based systems and related technologies. Its treatment of the increasing variety of such systems is designed to provide the reader with a substantial grounding in such technologies as expert systems, neural networks, genetic algorithms, case-based reasoning systems, data mining, intelligent agents and the

associated techniques and methodologies. The material is reinforced by the inclusion of numerous activities that provide opportunities for the reader to engage in their own research and reflection as they progress through the book. In addition, self-assessment questions allow the student to check their own understanding of the concepts covered. The book will be
