reflecting the yearly average number of citations to recent articles published in that journal. It is frequently used as a proxy for the relative importance of a journal within its field; journals with higher impact factors are often deemed to be more important than those with lower ones.

How to check impact factor of Scopus indexed journals

Journal Impact Factor (JIF) is calculated by Clarivate Analytics as the average of the sum of the citations received in a given year to a journal's previous two years of publications (linked to the journal, but not necessarily to specific publications) divided by the sum of "citable" publications in the previous two years.

Journal of Advanced Research in Dynamical and Control ...

The default option compares these journals based on SCImago Journal Rank (SJR). Click on the column header SJR to sort this list of so that the journal with the highest SJR appears at the top. Scopus displays a chart, comparing the journals selected by default. Use the tabs above the chart to compare titles by other metrics.

Impact factor - Scopus Journals Info

Scopus has a more comprehensive coverage of serial titles than the Journal Citation Reports from which the Impact Factor is calculated, with around twice as many titles. The additional titles are also ranked amongst the titles which are ranked with the Impact Factor, and so can affect their position.
