The Fifth Edition of INQUIRY INTO PHYSICS maintains the perfect balance of quantitative and conceptual content by carefully incorporating problem solving into a discernible conceptual framework. The text integrates simple mathematics so students can see the practicality of physics and have a means of testing scientific validity. Throughout the text, Ostdiek and Bord emphasize the relevance of physics in our daily lives. This text is committed to a concept- and inquiry-based style of learning, as evidenced in the ExploreItYourself boxes, concept-based flow-

charts in the chapter openers, and Learning Checks. Students will also find applied examples throughout the text, such as metal detectors, Fresnel lenses, kaleidoscopes, and smoke detectors. The text also periodically reviews the historical development of physics, which is particularly relevant as context for non-science majors.

Concerned with the effects of marine plastic debris, Barker's photographic work has reached worldwide audiences through international exhibitions, educational outreach, media reports and other means. Her aim is to expand public awareness of the environmental crisis by using aesthetically attractive visuals to communicate evolving scientific research.00This publication is introduced by Professor Richard Thompson OBE, a renowned marine scientist and Director of the University of Plymouth's Marine Institute. His work has contributed to legislation on microbeads in cosmetics and other forms of plastic pollution.00Other texts include a foreword by

Mandy Barker and an essay, *Picturing Plastic Oceans*, by Liz Wells, Professor in Photographic Culture at University of Plymouth. Barker also provides insight into the making of her images through an extensive survey of her personal process sketchbooks.

The twelfth-century French poet Chrétien de Troyes is a major figure in European literature. His courtly romances fathered the Arthurian tradition and influenced countless other poets in England as well as on the continent. Yet because of the difficulty of capturing his swift-moving style in translation, English-speaking audiences are largely unfamiliar with the pleasures of reading his poems. Now, for the first time, an experienced translator of medieval verse who is himself a poet provides a translation of Chrétien's major poem, *Yvain*, in verse that fully and satisfyingly captures the movement, the sense, and the spirit of the Old French original. *Yvain* is a courtly romance with a moral tenor; it is ironic and sometimes bawdy; the poetry is crisp and vivid. In addition, the psychological and the socio-historical perceptions of the poem are of profound literary and historical importance, for it evokes the emotions and the values of a flourishing, vibrant medieval past.

A discussion of recent numerical and algorithmic tools for the solution of certain flow problems arising in CFD, which are governed by the incompressible Navier-Stokes equations. The book contains the latest results for the numerical solution of (complex) flow problems on modern computer platforms, with particular emphasis on the solution process of the resulting high dimensional discrete systems of equations which is often neglected in other works. Together with the accompanying CD ROM containing the complete FEATFLOW 1.1 software and parts of the "Virtual Album of Fluid Motion", readers are able to perform their own numerical simulations and will find numerous suggestions for improving their own computational simulations.

We all know of at least one person who is slightly eccentric, slightly dubious, and more than a little quirky. However, Miss Krishna could very well leave them all behind with her lack of boundaries, her inability to pick up on social cues or her (slightly questionable) love for fine things. But Miss Krishna was the author's cross to bear and she bears it with as much good humour as possible, even through unannounced visits and unwanted gifts. Every person has a side that they never reveal to anyone, even those closest to them. And as the author was about to find out, so did Miss Krishna. Surprisingly funny and endearing in its strangeness, *The Connoisseur* is as well-written as it is tender. Read on.

Efficient Solvers for Incompressible Flow Problems Of The Elements

Education is considered to be a powerful tool for socio-economic development, environmental protection and improving the quality of life. The book describes various issues and concerns of environment and sustainable development, starting with human dimension of environmental conservation and sustainable development to perspectives of environmental education at school and college level with emphasis on structural and philosophy of environmental education, models and principles of sustainable development, teacher education, value education, women education and gender issues in environmental sustainability. The current concern for conservation of natural resources especially biodiversity has been emphasized in the perspectives of education. The book is an outstanding contribution supported with data, diagrams, flow charts and illustrations. It will be useful to students, teachers, academicians and researchers from the field of science as well as social science having interest in the fields of environmental education and sustainable development

When the elements collide, the truth ignites Meleena never quite fitted in among her fellow aquatic Meruyans, always skipping school to hide out and marvel at the natural world around her. So when she wins a place on the coveted

Council Apprenticeship team, no one is more surprised than she is. As she embarks on a tour of the nations, Meleena's curiosity catches the attention of the Warix, a race born with the power to control wind. But she is unprepared for the secrets she uncovers as she explores this new land. The Warix are locked in a deadly civil war, and her own people are being oppressed and exploited with no way out. Desperate to resolve this tangled conflict, Meleena sets out to locate an ancient weapon sought by both sides. Can she unite these warring peoples in time to save her own? The debut novel from J.B. Lesel throws you headlong into a diverse world where the elements take physical form to shape the lives of all. Perfect for fans of James Cameron's Avatar, and The Last Airbender.

Amphibian Research and Monitoring Initiative : Concepts and Implementation

Forests represent a remnant wilderness of high recreational value in the densely populated industrial societies, a threatened natural resource in some regions of the world and a renewable reservoir of essential raw materials for the wood processing industry. In June 1992 the United Nations Conference on the Environment and Development (UNCED) in Rio de Janeiro initiated a world-wide process of negotiation with the aim of ensuring sustainable management, conservation and development of forest resources. Although there seems to be unanimous support for sustainable development from all quarters, there is no generally accepted set of indicators which allows comparisons to be made between a given situation and a desirable one. In a recent summary paper prepared by

the FAO Forestry and Planning Division, Ljungman et al. (1999) find that forest resources continue to diminish, while being called upon to produce a greater range of goods and services and that calls for sustainable forest management will simply go unheeded if the legal, policy and administrative environment do not effectively control undesirable practices. Does the concept of sustainable forest management represent not much more than a magic formula for achieving consensus, a vague idea which makes it difficult to match action to rhetoric? The concept of sustainable forest management is likely to remain an imprecise one, but we can contribute to avoiding management practices that are clearly unsustainable.
