The astonishing untold history of the million and a half women who surrendered children for adoption due to enormous family and social pressure in the decades before Roe v. Wade. "It would take a heart of stone not to be moved by the oral histories of these women and by the courage and candor with which they express themselves." –The Washington Post "A remarkably well-researched and accomplished book." –The New York Times Book Review "A wrenching, riveting book." –Chicago Tribune In this deeply moving and myth-shattering work, Ann Fessler brings out into the open for the first time the hidden social history of adoption before Roe v. Wade – and its lasting legacy. An adoptee who was herself surrendered during those years and recently made contact with her mother, Ann Fessler brilliantly brings to life the voices of more than a hundred women, as well as the spirit of those times, allowing the women to tell their stories in gripping and intimate detail.

Against the background of age-old Greek wisdom, Epicurus' advice to 'live unnoticed' (lathe biosas) was particularly provocative and scandalous. Why, after all, would an unknown Greek soldier in Agamemnon's army have been happier than famous Achilles? Or why should an ordinary Athenian be regarded as more blessed and enviable than Pericles? Yet Epicurus' ideal was far from unattractive,

guaranteeing as it did a quiet and untroubled existence far from the dangerous turmoil of public life. This book casts new light on Epicurus' socio-political philosophy through a careful analysis of his arguments. It also shows how the ideal of an 'unnoticed life' was received during the later history of Epicureanism and how it occasionally occurs in ancient Latin poetry.

Chris Bowen is the star quarterback at his high school and is attracting interest from college scouts. He dreams of playing in the NFL but can be indecisive in crucial moments during a game. After taking a vicious hit to his head, he begins to have hallucinations of a 19th century whaling ship and thinks he's going crazy. Afraid of losing scouting interest and jeopardizing his future, he doesn't tell anyone. His mental state worsens when a ghost, an old mariner named York, arrives. York struggles to convince Chris that he did indeed have a past life and it is affecting what he does now. Chris's disbelief finally dissolves after a tragedy occurs. Then he begins to trust York and ultimately learns why he sometimes hesitates during a pivotal play. Once he overcomes that hesitation, he's ready to move on to college and adulthood. Sea Change is a gripping novel that consists of intertwined parallel stories, one an adventure that takes place 160 years ago, the other a tale of modern high school student life. Themes of friendship, the call of the sea, academic and athletic excellence, being on the cusp of adulthood, and preparing for the future run throughout the book.

"Everything epic fantasy should be: rich, cruel, gorgeous, brilliant, enthralling and deeply, deeply satisfying. I loved it."—Lev Grossman, author of *The Magicians* When destiny calls, there's no fighting back. Kihrin grew up in the slums of Quur, a thief and a minstrel's son raised on tales of long-lost princes and magnificent quests. When he is claimed against his will as the missing son of a treasonous prince, Kihrin finds himself at the mercy of his new family's ruthless power plays and political ambitions. Practically a prisoner, Kihrin discovers that being a long-lost prince is nothing like what the storybooks promised. The storybooks have lied about a lot of other things, too: dragons, demons, gods, prophecies, and how the hero always wins. Then again, maybe he isn't the hero after all. For Kihrin is not destined to save the world. He's destined to destroy it. Jenn Lyons begins the Chorus of Dragons series with *The Ruin of Kings*, an epic fantasy novel about a man who discovers his fate is tied to the future of an empire.

Climate change poses one of the biggest challenges facing humankind. The European Union (EU) has developed into a leader in international climate change politics although it was originally set up as a 'leaderless Europe' in which decision-making powers are spread amongst EU institutional, member state and societal actors. The central aim of this book, which is written by leading experts in the field, is to explain what kind of leadership has been offered by EU institutional, member state and societal actors. Although leadership is the overarching theme of the book, all chapters also address ecological modernisation, policy instruments, and multi-level governance as additional main themes. The book chapters focus on the Commission, European Parliament, European Council and Council of Ministers as well as member states (Britain, Germany, France, the Netherlands, Poland and Spain) and societal actors (businesses and environmental NGOs). Additional chapters analyse the EU as a global actor and the climate change policies of America and China and how they have responded to the EU's ambitions. This book will be of interest to students and scholars of environmental politics, EU politics, comparative politics and international relations as well as to practitioners who deal with EU and/or climate change issues.

From the award-winning author of *Swordpoint* comes a witty, wicked coming-of-age story that is both edgy and timeless. . . . Welcome to Riverside, where the aristocratic and the ambitious battle for power and prestige in the city's labyrinth of streets and ballrooms, theatres and brothels, boudoirs and salons. Into this alluring and alarming world walks a bright young woman ready to take it on and make her fortune. A well-bred country girl, Katherine knows all the rules of conventional society. Her biggest mistake is thinking they apply. Katherine's host and uncle, Alec Champion, the capricious and decadent Mad Duke Tremontaine, is in charge here—and to him, rules are made to be broken. When he decides it would be far more amusing for his niece to learn swordplay than to follow the usual path to ballroom and husband, her world changes forever. And there's no going back. Blade in hand, it's up to Katherine to find her own way through a maze of secrets and betrayals, nobles and scoundrels—and to gain the power, respect, and self-discovery that come to those who master. . . . "Unholy fun, and wholly fun . . . an elegant riposte, dazzlingly executed."—Gregory Maguire, *New York Times* bestselling author of *Wicked*

Shifting faculty roles in a changing landscape Ernest L. Boyer's landmark book *Scholarship*

Reconsidered: Priorities of the Professoriate challenged the publish-or-perish status quo that dominated the academic landscape for generations. His powerful and enduring argument for a new approach to faculty roles and rewards continues to play a significant part of the national conversation on scholarship in the academy. Though steeped in tradition, the role of faculty in the academic world has shifted significantly in recent decades. The rise of the non-tenure-track class of professors is well documented. If the historic rule of promotion and tenure is waning, what role can scholarship play in a fragmented, unbundled academy? Boyer offers a still much-needed approach. He calls for a broadened view of scholarship, audaciously refocusing its gaze from the tenure file and to a wider community. This expanded edition offers, in addition to the original text, a critical introduction that explores the impact of Boyer's views, a call to action for applying Boyer's message to the changing nature of faculty work, and a discussion guide to help readers start a new conversation about how *Scholarship Reconsidered* applies today.

Managing Ocean Environments in a Changing Climate summarizes the current state of several threats to the global oceans. What distinguishes this book most from previous works is that this book begins with a holistic, global-scale focus for the first several chapters and then provides an example of how this approach can be applied on a regional scale, for the Pacific region. Previous works usually have compiled local studies, which are essentially impossible to properly integrate to the global scale. The editors have engaged leading scientists in a number of areas, such as fisheries and marine ecosystems, ocean chemistry, marine biogeochemical cycling, oceans and climate change, and economics, to examine the threats to the oceans both individually and collectively, provide gross estimates of the economic and societal impacts of these threats, and deliver high-level recommendations. Nominated for a Katerva Award in 2012 in the Economy category *State of the science* reviews by known marine experts provide a concise, readable presentation written at a level for managers and students Links environmental and economic aspects of ocean threats and provides an economic analysis of action versus inaction Provides recommendations for stakeholders to help stimulate the development of policies that would help move toward sustainable use of marine resources and services

A proposal for a new way to do cognitive science argues that cognition should be described in terms of agent-environment dynamics rather than computation and representation. While philosophers of mind have been arguing over the status of mental representations in cognitive science, cognitive scientists have been quietly engaged in studying perception, action, and cognition without explaining them in terms of mental representation. In this book, Anthony Chemero describes this nonrepresentational approach (which he terms radical embodied cognitive science), puts it in historical and conceptual context, and applies it to traditional problems in the philosophy of mind. Radical embodied cognitive science is a direct descendant of the American naturalist psychology of William James and John Dewey, and follows them in viewing perception and cognition to be understandable only in terms of action in the environment. Chemero argues that cognition should be described in terms of agent-environment dynamics rather than in terms of computation and representation. After outlining this orientation to cognition, Chemero proposes a methodology: dynamical systems theory, which would explain things dynamically and without reference to representation. He also advances a background theory: Gibsonian ecological psychology, "shored up" and clarified. Chemero then looks at some traditional philosophical problems (reductionism, epistemological skepticism, metaphysical realism,

consciousness) through the lens of radical embodied cognitive science and concludes that the comparative ease with which it resolves these problems, combined with its empirical promise, makes this approach to cognitive science a rewarding one. “Jerry Fodor is my favorite philosopher,” Chemero writes in his preface, adding, “I think that Jerry Fodor is wrong about nearly everything.” With this book, Chemero explains nonrepresentational, dynamical, ecological cognitive science as clearly and as rigorously as Jerry Fodor explained computational cognitive science in his classic work *The Language of Thought*.

NOW A #1 NEW YORK TIMES BESTSELLER! An unflinching, darkly funny, and deeply moving story of a boy, his seriously ill mother, and an unexpected monstrous visitor. At seven minutes past midnight, thirteen-year-old Conor wakes to find a monster outside his bedroom window. But it isn't the monster Conor's been expecting-- he's been expecting the one from his nightmare, the nightmare he's had nearly every night since his mother started her treatments. The monster in his backyard is different. It's ancient. And wild. And it wants something from Conor. Something terrible and dangerous. It wants the truth. From the final idea of award-winning author Siobhan Dowd-- whose premature death from cancer prevented her from writing it herself-- Patrick Ness has spun a haunting and darkly funny novel of mischief, loss, and monsters both real and imagined.

Ending poverty and stabilizing climate change will be two unprecedented global achievements and two major steps toward sustainable development. But the two objectives cannot be considered in isolation: they need to be jointly tackled through an integrated strategy. This report brings together those two objectives and explores how they can more easily be achieved if considered together. It examines the potential impact of climate change and climate policies on poverty reduction. It also provides guidance on how to create a “win-win” situation so that climate change policies contribute to poverty reduction and poverty-reduction policies contribute to climate change mitigation and resilience building. The key finding of the report is that climate change represents a significant obstacle to the sustained eradication of poverty, but future impacts on poverty are determined by policy choices: rapid, inclusive, and climate-informed development can prevent most short-term impacts whereas immediate pro-poor, emissions-reduction policies can drastically limit long-term ones.

The ocean has absorbed a significant portion of all human-made carbon dioxide emissions. This benefits human society by moderating the rate of climate change, but also causes unprecedented changes to ocean chemistry. Carbon dioxide taken up by the ocean decreases the pH of the water and leads to a suite of chemical changes collectively known as ocean acidification. The long term consequences of ocean acidification are not known, but are expected to result in changes to many ecosystems and the services they provide to society. *Ocean Acidification: A National Strategy to Meet the Challenges of a Changing Ocean* reviews the current state of knowledge, explores gaps in understanding, and identifies several key

findings. Like climate change, ocean acidification is a growing global problem that will intensify with continued CO2 emissions and has the potential to change marine ecosystems and affect benefits to society. The federal government has taken positive initial steps by developing a national ocean acidification program, but more information is needed to fully understand and address the threat that ocean acidification may pose to marine ecosystems and the services they provide. In addition, a global observation network of chemical and biological sensors is needed to monitor changes in ocean conditions attributable to acidification.

This book presents the major findings and selected highlights from *Climate Change Impacts in the United States*, the third National Climate Assessment. The National Climate Assessment assesses the science of climate change and its impacts across the United States, now and throughout this century. It documents climate change related impacts and responses for various sectors and regions, with the goal of better informing public and private decision-making at all levels. A team of more than 300 experts, guided by a 60-member National Climate Assessment and Development Advisory Committee, produced the full report. The assessment draws from a large body of scientific peer-reviewed research, technical input reports, and other publicly available sources; all sources meet the standards of the Information Quality Act. The report was extensively reviewed by the public and experts, including a panel of the National Academy of Sciences, the 13 Federal agencies of the U.S. Global Change Research Program, and the Federal Committee on Environment, Natural Resources, and Sustainability.

"Outlander meets Camelot" (Kirsty Logan, author of *The Gracekeepers*) in the first book of an exciting historical trilogy that reveals the untold story of Languoreth—a powerful and, until now, tragically forgotten queen of sixth-century Scotland—twin sister of the man who inspired the legendary character of Merlin. Intelligent, passionate, rebellious, and brave, Languoreth is the unforgettable heroine of *The Lost Queen*, a tale of conflicted loves and survival set against the cinematic backdrop of ancient Scotland, a magical land of myths and superstition inspired by the beauty of the natural world. One of the most powerful early medieval queens in British history, Languoreth ruled at a time of enormous disruption and bloodshed, when the burgeoning forces of Christianity threatened to obliterate the ancient pagan beliefs and change her way of life forever. Together with her twin brother Lailoken, a warrior and druid known to history as Merlin, Languoreth is catapulted into a world of danger and violence. When a war brings the hero Emrys Pendragon, to their door, Languoreth collides with the handsome warrior Maelgwn. Their passionate connection is forged by enchantment, but Languoreth is promised in marriage to Rhydderch, son of the High King who is sympathetic to the followers of Christianity. As Rhydderch's wife, Languoreth must assume her duty to fight for the preservation of the Old Way, her kingdom, and all she holds dear. "Moving, thrilling, and ultimately spellbinding" (BookPage), *The Lost Queen* brings this remarkable woman to life—rescuing her from obscurity, and reaffirming her place at the center of the most enduring legends of all time. "Moving, thrilling, and ultimately spellbinding, *The Lost Queen* is perfect for readers of historical fiction like *The Clan of the Cave Bear* and *Wolf Hall*, and for lovers of fantasy like *Outlander* and *The Mists of Avalon*" (BookPage).
