A military response has been a viable option for combating international terrorism in the past and it will continue to be an option in the future. Possible military actions range from rescuing hostages to neutralizing terrorist camps and making direct strikes against targets verified as the infrastructure for state-sponsored training and support complexes of complex groups. The military response is part of a larger strategy that seeks to maximize the risk of punishment for terrorists and their sponsors and supporters while minimizing their potential rewards. In this context military action must be consistent with international law. If states decide that all means are justified, then those acting to preserve the rule of law in the face of the terrorist threat will become indistinguishable from the evil they seek to undo. Colonel Erickson's study presents an overview of international law directed at the issue of managing international terrorism. This study is thought provoking and provides the decision-maker with a useful tool. Of particular note is the checklist provided in appendix A that summarizes chapters 4-6. It behooves everyone dedicated to achieving a world free from terror to learn more of this phenomenon and how we can deal with it. Colonel Erickson's study, for the first time and in one place, makes available a general survey of international law concerning this subject. I highly recommend his study. Robert W. "A thrilling story of seduction, betrayal, and loss, Freud's Mistress will titillate fans of *Memoirs of a Geisha* and *The Other Boleyn Girl*."—Booklist In fin-de-siècle Vienna, it was not easy for a woman to find fulfillment both intellectually and sexually. But many believe that Minna Bernays was able to find both with one man—her brother-in-law, Sigmund Freud. At once a portrait of two sisters—the rebellious, independent Minna and her inhibited sister, Martha—and of the compelling and controversial doctor who would be revered as one of the twentieth century's greatest thinkers, *Freud's Mistress* is a novel rich with passion and historical detail and "a portrait of forbidden desire [with] a thought-provoking central question: How far are you willing to go to be happy?"* *Publishers Weekly

He painted trees as by some special divining instinct of their essential qualities. He understood them. He knew why in an oak forest, for instance, each individual was utterly distinct from its fellows, and why no two beeches in the whole world were alike. People asked him down to paint a favorite lime or

silver birch, for he caught the individuality of a tree as some catch the individuality of a horse. How he managed it was something of a puzzle, for he never had painting lessons, his drawing was often wildly inaccurate, and, while his perception of a Tree Personality was true and vivid, his rendering of it might almost approach the ludicrous. Yet the character and personality of that particular tree stood there alive beneath his brush—shining, frowning, dreaming, as the case might be, friendly or hostile, good or evil. It emerged.

The monograph reflects the current standard of knowledge about the open questions considered, taking care to collect and collate all the relevant ideas, facts and formulae which have been until now widely scattered throughout the literature. For the first time, these aspects are collated in book form. Care is taken to clarify the issues, give a systematic collection of conditions which prospective solutions of these open questions have to meet, and gather and collate various useful theoretical concepts and results.

Radioactive Investigations of Oil and Gas Wells: A Textbook focuses on the radioactive methods used in the investigations of oil and gas wells, including radioactivity, nuclear reactions, and tracer method. The book first offers information on physical principles of the radiometry of wells and radioactive properties of rocks. Discussions focus on artificial transformation of elements and nuclear reactions; radioactivity and the law of radioactive disintegration; natural radioactivity; and induced radioactivity of rocks. The text then ponders on the methods of well geometry

and radiometric apparatus. The publication examines the interpretation of results of measurements by the natural radioactivity method and working technique and interpretation of diagrams of the tracer method. Topics include selection of the radioactive isotope and technology of preparation of activated fluid and determination of absorbing strata and of communication between the strata outside the tubing in production wells and pressurized wells. The text is a dependable reference for readers interested in the radioactive methods used in the investigations of oil and gas wells.
