Thinking I may get more
interest here than in the
giant scale forum, anyhow
to make long story short, I
built a 1.20 size
nitroplanes arf with an

MLD28 engine in it, aside
from having to hack the
cowl it went well, and
performed pretty well.

I just put together a seagull
ultimate 90 biplane while
I'm waiting on my 300sp to
get here. I am looking for a
"budget engine". I am
looking at a crcc 26 or a 20.
Is there a big size difference?
I had looked a an aerovate
20 and 26 also. The 26
lookes as if it would be to

long. I know a 20 of either will fit. Would a 26 be overkill??

Seagull FAQ

90/110 Series. The Model 90 is in fact the same as the model 110. The 110 was named to be 'one up' from the Century or 100. When the 'Trades Descriptions Act' came in in the 1980's they realised the motors could not really be described as certain hp, as they did not quite 'get there' So instead they measured prop thrust, in pounds.

I have for sale a Model 110 / Model 90 British Seagull long-shaft outboard motor, serial number EFNRL 687DD9, manufactured April 1979. This motor is in very good

running and cosmetic condition and needs no parts or repair. It came on a 25' sailboat that I bought in 1984, and would propel this 4000# keel boat at hull speed.
