Announcing an all-new SELF-PACED TRAINING KIT designed to help maximize your performance on 70-667, the required exam for the MCTS certification: Configuring Microsoft SharePoint 2010. This 2-in-1 kit includes the official Microsoft study guide, plus practice tests on CD to help you assess your skills. It comes packed with the tools and features exam candidates want most - including in-depth, self-paced training based on final exam content; rigorous, objective-by-objective review; exam tips from expert, exam-certified authors; and customizable testing options. It also provides real-world scenarios, case study examples, and troubleshooting labs for the skills and expertise you can use on the job. Work at your own pace through the lessons and lab exercises in the official study guide. Coverage includes installing and configuring a SharePoint environment, deploying applications, and managing and maintaining a SharePoint environment. Then assess yourself using practice questions on CD, featuring multiple customizable testing options to meet your specific needs. Choose timed or untimed testing mode, generate random tests, or focus on discrete objectives. You get detailed explanations for right and wrong answers - including pointers back to the book for further study. - making this kit an exceptional value and a great career investment. A Note Regarding the CD or DVD Assess your skills with practice tests. You can work through hundreds of questions using multiple testing modes to meet your specific learning needs. You get detailed explanations for right and wrong answers-including a customized learning path that describes how and where to focus your studies. For customers who purchase an ebook version of this title, instructions for downloading the CD files can be found in the ebook.

Today, Web search is treated as a solitary experience. Web browsers and search engines are typically designed to support a single user, working alone. However, collaboration on information-seeking tasks is actually commonplace. Students work together to complete homework assignments, friends seek information about joint entertainment opportunities, family members jointly plan vacation travel, and colleagues jointly conduct research for their projects. As improved networking technologies and the rise of social media simplify the process of remote collaboration, and large, novel display form-factors simplify the process of co-located group work, researchers have begun to explore ways to facilitate collaboration on search tasks. This lecture investigates the who, what, where, when and why of collaborative search, and gives insight in how emerging solutions can address collaborators' needs. Table of Contents: Introduction / Who? / What? / Where? / When? / Why? / Conclusion: How?

The book covers different aspects of real-world applications of optimization algorithms. It provides insights from the Fourth International Conference on Harmony Search, Soft Computing and Applications held at BML Munjal University, Gurgaon, India on February 7– 9, 2018. It consists of research articles on novel and newly proposed optimization algorithms; the theoretical study of nature-inspired optimization algorithms; numerically established results of nature-inspired optimization algorithms; and real-world applications of optimization algorithms and synthetic benchmarking of optimization algorithms.

The 18th European Symposium on Computer Aided Process Engineering contains papers presented at the 18th European Symposium of Computer Aided Process Engineering (ESCAPE 18) held in Lyon, France, from 1-4 June 2008. The ESCAPE series brings the latest innovations and achievements by leading professionals from the industrial and academic communities. The series serves as a forum for engineers, scientists, researchers, managers and students from academia and industry to: - present new computer aided methods, algorithms, techniques related to process and product engineering, - discuss innovative concepts, new challenges, needs and trends in the area of CAPE. This research area bridges fundamental sciences (physics, chemistry, thermodynamics, applied mathematics and computer sciences) with the various aspects of process and product engineering. The special theme for ESCAPE-18 is CAPE for the Users! CAPE systems are to be put in the hands of end users who need functionality and assistance beyond the scientific and technological capacities which are at the core of the systems. The four main topics are: - off-line systems for synthesis and design, - on-line systems for control and operation, - computational and numerical solutions strategies, - integrated and multi-scale modelling and simulation, Two general topics address the impact of CAPE tools and methods on Society and Education. * CD-ROM that accompanies the book contains all research papers and contributions * International in scope with guest speeches and keynote talks

from leaders in science and industry * Presents papers covering the latest research, key top areas and developments in Computer Aided Process Engineering

Decision support systems (DSS) are widely touted for their effectiveness in aiding decision making, particularly across a wide and diverse range of industries including healthcare, business, and engineering applications. The concepts, principles, and theories of enhanced decision making are essential points of research as well as the exact methods, tools, and technologies being implemented in these industries. From both a standpoint of DSS interfaces, namely the design and development of these technologies, along with the implementations, including experiences and utilization of these tools, one can get a better sense of how exactly DSS has changed the face of decision making and management in multi-industry applications. Furthermore, the evaluation of the impact of these technologies is essential in moving forward in the future. The Research Anthology on Decision Support Systems and Decision Management in Healthcare, Business, and Engineering explores how decision support systems have been developed and implemented across diverse industries through perspectives on the technology, the utilizations of these tools, and from a decision management standpoint. The chapters will cover not only the interfaces, implementations, and functionality of these tools, but also the overall impacts they have had on the specific industries mentioned. This book also evaluates the effectiveness along with benefits and challenges of using DSS as well as the outlook for the future. This book is ideal for decision makers, IT consultants and specialists, software developers, design professionals, academicians, policymakers, researchers, professionals, and students interested in how DSS is being used in different industries.

Hybrid Metaheuristics Springer Science & Business Media

This study examines the cross-level effect of group-level managers on member firms' problemistic search in hierarchical business groups. Using multi-level data from Korean business groups, we propose that the effects of failure to meet an aspiration level on R&D search intensity increase when member firm performance and R&D investments are more cognitively accessible to group-level managers. Specifically, we find, first, that when underperforming firms are widespread in a business group, a focal member firm intensifies R&D search in response performance below an aspiration level because member firm performance, as a group-level problem, becomes cognitively accessible to group-level managers. Second, as member firms operating in R&D intensive industries are more prevalent in a business group, R&D investments, as a search solution, become more cognitively accessible to group-level managers. Thus, a focal member firm reinforces R&D search in response to the performance shortfall. We discuss the implications of these findings for research on the behavioral theory of the firm and performance feedback.

In our managed care era, group therapy, long the domain of traditional psychodynamically oriented therapists, has emerged as the best option for millions of Americans. However, the process can be frustratingly slow, and studies show that patients actually feel worse after months of group treatment than when they began. Can and should "the group" speed a person's progress? Now, in this "must have" book, marriage and family therapist Linda Metcalf persuasively argues that the collaborative nature of group therapy actually lends itself to time-limited treatment. She combines the best elements of group work and the popular solution focused brief therapy approach to create new opportunities for practitioners and patients alike. Among the topics covered in this valuable guide are: how to learn the model how to design a group and recruit members how to identify exceptions to a group member's self-destructive behaviors and thoughts how to help members focus on their successes rather than their failures how to keep the group solution focused when therapists or members fall back into old patterns This unique resource also includes case examples and session transcripts to follow, together with reproducible forms that can be used as they are or tailored to a therapist's needs. Solution Focused Group Therapy is an up-to-the-minute, highly accessible resource for therapists of any orientation. Managed care companies in particular will welcome this model, which deals so effectively and economically with today's biggest problems, including eating disorders, chemical dependencies, grief, depression, anxiety, and sexual abuse.

Under current proposals the Maritime & Coastguard Agency plans to close ten of the existing 14 Maritime Rescue Coordination Centres and to leave three that remain open on a 24-hour basis and five that will operate in "daylight" hours only. The Transport Committee found little support for the measures and has no confidence that, under these proposals, the Coastguard will in future be able to respond to emergencies at sea as well as they do now, let alone in a more effective way. The Committee is not convinced by the Government's claim that technology can, at present, replace local knowledge. Serious concerns were raised that the safety of people at sea, on cliffs and beaches will be jeopardised if the proposals proceed in their current form. Ministers must issue revised proposals for further consultation. The Committee also strongly condemns the Government's cost-cutting decision to withdraw funding for the four Emergency Towing Vessels (ETVs) stationed around the UK coast - large tugs that intercept disabled ships to prevent environmental pollution disasters. The Transport Committee also criticises proposals to completely remove government funding for the Maritime Incident Response group (MIRG), a national fire-fighting-at-sea capability. Ministers should instead adopt a slimmed-down MIRG which is more cost-effective than the present arrangement. Lastly, the Committee records its disappointment that Mike Penning MP, Minister for Shipping, instructed regular coastguards not to give oral evidence to the committee on the basis that they were junior civil servants.

Research on small groups is highly diverse because investigators who study such groups vary in their disciplinary identifications, theoretical interests, and methodological preferences. The goal of this volume is to capture that diversity, and thereby convey the breadth and excitement of

small group research by acquainting students with work on five fundamental aspects of groups. The volume also includes an introductory chapter by the editors which provides an overview of the history of and current state-of-the-art in the field. Together with introductions to each section, discussion questions and suggestions for further reading, make the volume ideal reading for senior undergraduate and graduate students interested in group dynamics.

This volume critically evaluates more than a century of empirical research on the effectiveness of small, task-performing groups, and offers a fresh look at the costs and benefits of collaborative work arrangements. The central question taken up by this book is whether -- and under what conditions -- interaction among group members leads to better performance than would otherwise be achieved simply by combining the separate efforts of an equal number of people who work independently. This question is considered with respect to a range of tasks (idea-generation, problem solving, judgment, and decision-making) and from several different process perspectives (learning and memory, motivation, and member diversity). As a framework for assessing the empirical literature, the book introduces the concept of 'synergy.' Synergy refers to an objective gain in performance that is attributable to group interaction. Further, it distinguishes between weak and strong synergy, which are performance gains of different magnitude. The book highlights the currently available empirical evidence for both weak and strong synergy, identifies the conditions that seem necessary to produce each, and suggests where the search for synergy might best be directed in the future. The book is at once a high-level introduction to the field, a review of the field's history, and a scholarly critique of the current state-of-the-art. As such, it is essential reading for graduate students, advanced undergraduate students, and researchers interested in group dynamics generally -- and small group performance in particular.

Artificial intelligence is a constantly advancing field that requires models in order to accurately create functional systems. The use of natural acumen to create artificial intelligence creates a field of research in which the natural and the artificial meet in a new and innovative way. Critical Developments and Applications of Swarm Intelligence is a critical academic publication that examines developing research, technologies,

and function regarding natural and artificial acumen specifically, in regards to self-organized systems. Featuring coverage on a broad range of topics such as evolutionary algorithms, optimization techniques, and computational comparison, this book is geared toward academicians, students, researchers, and engineers seeking relevant and current research on the progressive research based on the implementation of swarm intelligence in self-organized systems.

This book presents carefully selected contributions devoted to the modern perspective of AI research and innovation. This collection covers several areas of applications and motivates new research directions. The theme across all chapters combines several domains of AI research, Computational Intelligence and Machine Intelligence including an introduction to the recent research and models. Each of the subsequent chapters reveals leading edge research and innovative solution that employ AI techniques with an applied perspective. The problems include classification of spatial images, early smoke detection in outdoor space from video images, emergent segmentation from image analysis, intensity modification in images, multi-agent modeling and analysis of stress. They all are novel pieces of work and demonstrate how AI research contributes to solutions for difficult real world problems that benefit the research community, industry and society.
