- Food preservation and cooking
- Welding and blacksmithing

- Firefighting
- Archery and less-than-lethal defense tools
- And more...

Field-tested and comprehensive, *Tools for Survival* is a must-have reference for anyone who wants to know how to prepare for the worst.

The IL "track" —one of five tracks within VA's VR&E program—provides a range of benefits to help veterans with service-connected disabilities live independently when employment is not considered feasible at the time they enter the VR&E program. These benefits can include counseling, assistive devices, and other services or equipment. GAO was asked to review issues related to the IL track. This report examines (1) the characteristics of veterans in the IL track, and the types and costs of benefits they were provided; (2) the extent to which their IL plans were completed, and the time it took to complete them; and (3) the extent to which the IL track has been administered appropriately and consistently across regional offices. To conduct this work, GAO analyzed VA administrative data from fiscal years 2008 to 2011, and reviewed a random, generalizable sample of 182 veterans who entered the IL track in fiscal year 2008. In addition, GAO visited five VA regional offices; interviewed agency officials and staff; and reviewed relevant federal laws, regulations, and agency policies and procedures. Of the 9,215 veterans who entered the Department of Veterans Affairs' (VA) Independent Living (IL) track within the Vocational Rehabilitation and Employment (VR&E) program in fiscal years 2008 to 2011, most were male Vietnam era veterans in their 50s or 60s. Almost 60 percent served in the U.S. Army, and fewer than 1 percent served in the National Guard or Reserve. The most prevalent disabilities among these veterans were post-traumatic stress disorder and tinnitus. GAO's review of 182 IL cases from fiscal year 2008 found that VR&E provided a range of IL benefits to veterans. Among these cases, the most common benefits were counseling services and computers. Less common benefits included gym memberships, camping equipment, and a boat. GAO estimated that VR&E spent nearly \$14 million on benefits for veterans entering the IL track in fiscal year 2008—an average of almost \$6,000 per IL veteran. Most veterans completed their IL plans, which identify their individual goals to live independently and the benefits VR&E will provide. About 89 percent of fiscal year 2008 IL veterans were considered by VR&E to be "rehabilitated," that is, generally, to have completed their IL plans by the end of fiscal year 2011. VR&E discontinued or closed about 5 percent of cases for various reasons, such as the veteran declined benefits. Six percent of cases were open at the end of fiscal year 2011. Because the complexity of IL cases varied depending on veterans' disabilities and needs, some cases were fairly simple for VR&E to close. For example, one IL case only called for the installation of door levers and a bathtub rail. Another more complex case involved the provision of a range of IL benefits, including home modifications. Rehabilitation rates across regions varied from 0 to 100 percent, and regions with larger IL caseloads generally rehabilitated a greater percentage of IL veterans. While IL plans nationwide were completed in 384 days, on average, completion times varied by region, from 150 to 895 days. VR&E exercises limited oversight to ensure appropriate and consistent administration of the IL track across its regions. While the law currently allows 2,700 veterans to enter the IL track annually, data used to monitor the cap are based on the number of IL plans developed, not on the number of individual veterans admitted. Veterans can have more than one plan in a fiscal year, so one veteran could be counted multiple times towards the cap. GAO-13-474

Tens of thousands of mechanical engineers are engaged in the design, building, upgrading, and optimization of various material handling facilities. The peculiarity of material handling is that there are numerous technical solutions to any problem. The engineer's personal selection of the optimal solution is as critical as the technical component. Michael Rivkin, Ph.D., draws on his decades of experience in design, construction, upgrading, optimization, troubleshooting, and maintenance throughout the world, to highlight topics such as:

- physical principles of various material handling systems;
- considerations in selecting technically efficient and environmentally friendly equipment;
- best practices in upgrading and optimizing existing bulk material handling facilities;
- strategies to select proper equipment in the early phases of a new project.

Filled with graphs, charts, and case studies, the book also includes bulleted summaries to help mechanical engineers without a special background in material handling find optimal solutions to everyday problems.

**Named One of the New York Post's Best New Books to Read ** FIRE IN THE STRAW is the witty and deeply felt memoir of Nick Lyons, a man with an intrepid desire to reinvent himself—which he does, over and over. Nick Lyons shape shifts from reluctant student and graduate of the Wharton School, to English Professor, to husband of a fiercely committed painter, to ghost writer, to famous fly fisherman and award-winning author, to father and then grandfather, to Executive Editor at a large book publishing company, and finally to founder and publisher of his own successful independent press.. Written with the same warm and earthy voice that has enthralled tens of thousands of fly-fishing readers, Nick weaves the disparate chapters of his life: from the moment his widowed mother drops him off at a grim boarding school at the age of five, where he spends three lonely and confusing years; to his love of basketball and pride playing for Penn; to the tumultuous period, in the army and after, when he found and was transformed by literature; to his marriage to Mari, his great love and anchor of his life. Suddenly, with a PhD in hand and four children, Nick embarks on a complex and thrilling ride, juggling family, fishing, teaching, writing, and publishing, the wolf always at his door. Against all odds, The Lyons Press survives, his children prosper, his wife's art flourishes, and his books and articles make him a household name. Fire in the Straw is a love story, a confessional, and a beautiful big-hearted memoir.

"In the cozy den of the large but modest house in Omaha where he has lived since he started on his first billion, Warren Buffett watched the horrors of Hurricane Katrina unfold on television in early September 2005. . . . On the fourth day, he beheld in disbelief the paralysis of local, state, and federal authorities unable to commence basic operations of rescue and sustenance, not just in New Orleans, but in towns and villages all along the Gulf Coast. . . . He knew exactly what he had to do. . ." So begins the vivid fictional account by political activist and bestselling author Ralph Nader that answers the question, "What if?" What if a cadre of superrich individuals tried to become a driving force in America to organize and institutionalize the interests of the citizens of this troubled nation? What if some of America's most powerful individuals decided it was time to fix our government and return the power to the people? What if they focused their power on unionizing Wal-Mart? What if a national political party were formed with the sole purpose of advancing clean elections? What if these seventeen superrich individuals decided to galvanize a movement for alternative forms of energy that will effectively clean up the environment? What if together they took on corporate goliaths and Congress to provide the necessities of life and advance the solutions so long left on the shelf by an avaricious oligarchy? What could happen? This extraordinary story, written by the author who knows the most about citizen action, returns us to the literature of American social movements—to Edward Bellamy, to Upton Sinclair, to John Steinbeck, to Stephen Crane—reminding us in the process that changing the body politic of America starts with imagination.

Synthesizes the empirical literature on organizational structuring to answer the question of how organizations structure themselves --how they resolve needed coordination and division of labor. Organizational structuring is defined as the sum total of the ways in which an organization divides and coordinates its labor into distinct tasks. Further analysis of the research literature is needed in order to build a conceptual framework that will fill in the significant gap left by not connecting a description of structure to its context: how an organization actually functions. The results of the synthesis are five basic configurations (the Simple Structure, the Machine Bureaucracy, the Professional Bureaucracy, the Divisionalized Form, and the Adhocracy) that serve as the fundamental elements of structure in an organization. Five basic parts of the contemporary organization (the operating core, the strategic apex, the middle line, the technostructure, and the support staff), and five theories of how it functions (i.e., as a system characterized by formal authority, regulated flows, informal communication, work constellations, and ad hoc decision processes) are theorized. Organizations function in complex and varying ways, due to differing flows -including flows of authority, work material, information, and decision processes. These flows depend on the age, size, and environment of the organization; additionally, technology plays a key role because of its importance in structuring the operating core. Finally, design parameters are described - based on the above five basic parts and five theories - that are used as a means of coordination and division of labor in designing organizational structures, in order to establish stable patterns of behavior.(CJC).

The book provides the theoretical fundamentals on turbulence and a complete overview of turbulence models, from the simplest to the most advanced ones including Direct and Large Eddy Simulation. It mainly focuses on problems of modeling and computation, and provides information regarding the theory of dynamical systems and their bifurcations. It also examines turbulence aspects which are not treated in most existing books on this subject, such as turbulence in free and mixed convection, transient turbulence and transition to turbulence. The book adopts the tensor notation, which is the most appropriate to deal with intrinsically tensor quantities such as stresses and strain rates, and for those who are not familiar with it an Appendix

on tensor algebra and tensor notation are provided.
