Annual Report of the Commissioner of Patents Minotaur Books

The death of Paco "Packy" Johnson shouldn't have surprised anyone. Paco Johnson spent a lifetime in the system -- starting in juvie at age 10, then prison for most of his adult life. But he managed to make some real friends in prison, friends who helped him get parole, a place to stay, and plans to help him adjust to a life outside prison after seventeen years behind bars. But only seventeen hours after he was released, he was found dead -- murdered -- in the streets of the Bronx. James Beck can't save Packy any longer -- but he can try to find out what happened to Packy, and why, and exact a measure of justice. Beck, ringleader of a tight clique of ex-cons based in Brooklyn's Red Hook section, is determined to accord Packy at least some dignity and a measure of justice. But what drove Packy out onto the streets of the Bronx his first night back? Who did he run into that hated him enough to viciously beat him before executing him, and yet left behind his wallet full of cash? But what at first appears to be a simple, if tragic, street killing, quickly becomes something much more difficult and complex. And it will take all the skills, connections, and cunning of Beck and his team not only to learn the truth but to survive the forces they've unwittingly unleashed.

The global crisis the automotive industry has slipped into over the second half of 2008 has set a fierce spotlight not only on which cars are the right ones to bring to the market but also on how these cars are developed. Be it OEMs developing new models, suppliers integrating themselves deeper into the development processes of different OEMs, analysts estimating economical risks and opportunities of automotive investments, or even governments creating and evaluating scenarios for financial aid for suffering automotive companies: At the end of the day, it is absolutely indispensable to comprehensively understand the processes of automotive development - the core subject of this book. Let's face it: More than a century after Carl Benz, Wilhelm Maybach and Gottlieb Daimler developed and produced their first motor vehicles, the overall concept of passenger cars has not changed much. Even though components have been considerably optimized since then, motor cars in the 21st century are still driven by combustion engines that transmit their propulsive power to the road surface via gearboxes, transmission shafts and wheels, which together with spring-damper units allow driving stability and ride comfort. Vehicles are still navigated by means of a steering wheel that turns the front wheels, and the required control elements are still located on a dashboard in front of the driver who operates the car sitting in a seat.
