The Study of Second Language Acquisition Addison-Wesley Longman

How does classroom language learning take place? How does an understanding of second language acquisition contribute to language teaching? In answering these questions, Rod Ellis reviews a wide range of research on classroom learning, developing a theory of instructed second language acquisition that has significant implications for language teaching. The early chapters of this book trace the attempts to explain classroom language learning in terms of general theory of learning (behaviorism) and the study of naturalistic language learning. The middle chapters document the attempts of researchers to enter the "black box" of the classroom in order to describe the teaching-learning behaviors that take place there and to investigate to what extent and in what ways instruction results in acquisition. The book concludes with a theory of classroom language learning. This theory advances an explanation of the relationship between explicit and implicit linguistic knowledge and in so doing accounts for how both form-focused and meaning-focused instruction contribute to second language acquisition in the classroom.

The Study of Second Language Acquisition Wiley-Blackwell

This book offers a succinct theoretical introduction to the basic concepts in language testing in a way that is easy to understand. In the Japanese context, this book is highly recommended for university faculty members involved in obtaining assessment literacy, teachers who want to validate their exploratory teaching and testing, or applied linguistics students new to the language testing field. The book is divided into four main sections. The first provides an overview of the principles of language testing. The next contains short extracts from the testing literature with questions which stimulate further thinking. Section 3 is a list of references with brief annotations and Section 4 a glossary of referenced testing terms.

Becoming and Being an Applied Linguist contains narrative accounts of the lives of thirteen well-established applied linguists. Their professional autobiographies document the development of some of the key areas of applied linguistics – second, language acquisition, motivation, grammar, vocabulary, testing, second language writing, second language classroom research, practitioner research, English as a lingua franca, teacher cognition, and computer-assisted language learning. The book tells how these applied linguists grew into their areas of specialization. It will be of interest to any would-be applied linguist. The book also provides a readable overview of the whole field that will be of value to students of applied linguistics.

Understanding Second Language Acquisition Multilingual Matters

The last decade has seen a growing body of research investigating various aspects of L2 learners' performance of tasks. This book focuses on one task implementation variable: planning. It considers theories of how opportunities to plan a task affect performance and tests claims derived from these theories in a series of empirical studies. The book examines different types of planning (i.e. task rehearsal, pre-task planning and within-task planning), addressing both what learners do when they plan and the effects of the different types of planning on L2 production. The choice of planning as the variable for investigation in this book is motivated both by its importance for current theorizing about L2 acquisition (in particular with regard to cognitive theories that view acquisition in terms of information processing) and its utility to language teachers and language testers, for unlike many other constructs in SLA 'planning' lends itself to external manipulation. The study of planning, then, provides a suitable forum for demonstrating the interconnectedness of theory, research and pedagogy in SLA.

Alternative Approaches to Second Language Acquisition Oxford University Press

Task-based language teaching is now a well-established pedagogic approach but problematic issues remain, such as whether it is appropriate for all learners and in all instructional contexts. This book draws on the author's experience of working with teachers, together with his knowledge of relevant research and theory, to examine the key issues. It proposes flexible ways in which tasks can be designed and implemented in the language classroom to address the problems that teachers often face with task-based language teaching. It will appeal to researchers and teachers who are interested in task-based language teaching and the practical and theoretical issues involved. It will also be of interest to students and researchers working in the areas of applied linguistics, TESOL and second language acquisition.

Analysing Learner Language Routledge

Bringing together current research, analysis, and discussion of the role of corrective feedback in second language teaching and learning, this volume bridges the gap between research and pedagogy by identifying principles of effective feedback strategies and how to use them successfully in classroom instruction. By synthesizing recent works on a range of related themes and topics in this area and integrating them into a single volume, it provides a valuable resource for researchers, graduate students, teachers, and teacher educators in various contexts who seek to enhance their skills and to further their understanding in this key area of second language education.

Understanding Second Language Acquisition Multilingual Matters

This volume presents six alternative approaches to studying second language acquisition – 'alternative' in the sense that they contrast with and/or complement the cognitivism pervading the field. All six approaches – sociocultural, complexity theory, conversation-analytic, identity, language socialization, and sociocognitive – are described according to the same set of six headings, allowing for direct comparison across approaches. Each chapter is authored by leading advocates for the approach described: James Lantolf for the sociocultural approach; Diane Larsen-Freeman for the complexity theory approach; Gabriele Kasper and Johannes Wagner for the conversation-analytic approach; Bonny Norton and Carolyn McKinney for the identity approach; Patricia Duff and Steven Talmy for the language socialization approach and Dwight Atkinson for the sociocognitive approach. Introductory and commentary chapters round out this volume. The editor's introduction describes the significance of alternative approaches to SLA studies given its strongly cognitivist orientation. Lourdes Ortega's commentary considers the six approaches from an 'enlightened traditional' perspective on SLA studies – a viewpoint which is cognitivist in orientation but broad enough to give serious and balanced consideration to alternative approaches. This volume is essential reading in the field of second language acquisition.

Since it was first established in the 1970s the Applied Linguistics and Language Study series has become a major force in the study of practical problems in human communication and language education. Drawing extensively on empirical research and theoretical work in linguistics, sociology, psychology and education, the series explores key issues in language acquisition and language use. What the learner contributes is central to the language learning process. Learner Contributions to Language Learning provides a uniquely comprehensive account of learners' personal attributes, their thinking, their feelings, and their actions that have been shown to have an impact upon language learning. Containing specific chapters from leading names in the field, this book provides both a review of what has been discovered from previous research and identifies important future directions for research on learner contributions. It is a landmark volume setting the agenda for language learning research in the 21st century and it provides invaluable information for all those engaged in language teaching. Task-Based Language Teaching Cambridge University Press

Whether we grow up with one, two, or several languages during our early years of life, many of us will learn a second, foreign, or heritage language in later years. The field of Second language acquisition (SLA, for short) investigates the human capacity to learn additional languages in late childhood, adolescence, or adulthood, after the first language --in the case of monolinguals-- or languages --in the case of bilinguals-- have already been acquired. Understanding Second Language Acquisition offers a wide-encompassing survey of this burgeoning field, its accumulated findings and proposed theories, its developed research paradigms, and its pending questions for the future. The book zooms in and out of universal, individual, and social forces, in each case evaluating the research findings that have been generated across diverse naturalistic and formal contexts for second language acquisition. It assumes no background in SLA and provides helpful chapter-by-chapter summaries and suggestions for further reading. Ideal as a textbook for students of applied linguistics, foreign language education, TESOL, and education, it is also recommended for students of linguistics, developmental psycholinguistics, psychology, and cognitive science. Input, Interaction, and the Second Language Learner Cambridge University Press

Infants and very young children develop almost miraculously the ability of speech, without apparent effort, without even being taught – as opposed to the teenager or the adult struggling without, it seems, ever being able to reach the same level of proficiency as five year olds in their first language. This useful textbook serves as a guide to different types of language acquisition: monolingual and bilingual first language development and child and adult second language acquisition. Unlike other books, it systematically compares first and second language acquisition, drawing on data from several languages. Research questions and findings from various subfields are helpfully summarized to show students how they are related and how they often complement each other. The essential guide to studying first and second language acquisition, it will be used on courses in linguistics, modern languages and developmental psychology.

The Interactional Feedback Dimension in Instructed Second Language Learning OUP Oxford

This book examines current advances in the role of interactional feedback in second language (L2) teaching and learning. Drawing on recent theory and research in both classroom and laboratory contexts, the book explores a wide range of issues regarding interactional feedback and their relevance for both theory and practice, including how interactional feedback is used, processed, and contributes to L2 acquisition. This book will provide a useful resource for applied linguistics students and academics as well as language teachers and teacher educators who would like to gain insight into the role of interactional feedback and how it can be used as a means of integrating form and meaning in classroom contexts.

Second Language Acquisition Routledge

This text goes back to basics by investigating fundamental assumptions about the way English should be defined and taught as a foreign language. It looks at different attitudes to English teaching, and critically examines proposals for course content.

SLA Research and Language Teaching OUP Oxford

This book forms an invaluable reference work for all teachers of second languages and researchers in the field of L2 acquisition. It discusses the contribution that modern research into L2 acquisition makes to the curriculum development process. It also provides the reader with arguments for and against the various approaches to teaching.

Individual Differences in Second Language Learning Routledge

Twenty years after its first publication, Susan M. Gass's *Input, Interaction, and the Second Language Learner* has become a classical text in the field of second language acquisition (SLA). This new printing includes the original text, along with a new preface that comprises individual consultations between the author and Alison Mackey, Rod Ellis, and Mike Long on the importance of the project two decades later. The volume provides an important view of the relationship between input, interaction, and SLA. In so doing, it should prove useful to those whose major concern is with the acquisition of a second or foreign language, as well as those who are primarily interested in these issues from a pedagogical perspective. The book does not explicate or advocate a particular teaching methodology, but does attempt to lay out some of the underpinnings of what is involved in interaction—what interaction is and what purpose it serves. Research in SLA is concerned with the knowledge that second language learners do and do not acquire, and how that knowledge comes about. This book ties these issues together from three perspectives: the input/interaction framework, information-processing, and learnability. This Routledge Linguistics Classic remains a key text for all SLA scholars and an essential supplementary volume for students on SLA courses.

Routledge Introductions to Applied Linguistics is a series of introductory level textbooks covering the core topics in Applied Linguistics, primarily designed for those beginning postgraduate studies, or taking an introductory MA course as well as advanced undergraduates. Titles in the series are also ideal for language professionals returning to academic study. The books take an innovative 'practice to theory' approach, with a 'back-to-front' structure. This leads the reader from real-world problems and issues, through a discussion of intervention and how to engage with these concerns, before finally relating these practical issues to theoretical foundations. Additional features include a glossary of key terms, and discussion questions. Following the back-to-front approach of the series, the book takes problematic issues in language pedagogy as its starting points. These are then examined in terms of second language acquisition. Each chapter begins with a look at the pedagogical proposals found in teacher guides and then asks 'Do these proposals accord with what we know about how languages are acquired?' Pedagogical topics covered include teaching methods, syllabus design, explicit instruction, comprehension versus production-based instruction, task-based instruction, authentic materials, the role of the learners' first language in the classroom, error correction and catering for individual differences. Including a glossary of key terms and questions for discussion at the end of each chapter, and assuming no prior knowledge of second language acquisition, this is the ideal text for all students studying language teaching methods, language teacher education, English teaching methodology and second language acquisition modules in advanced undergraduate and postgraduate/graduate TESOL and Applied Linguistics courses.
