This book examines minban teacher policies and their implementation in China between 1949 and 2000, when rural areas were in severe shortage of qualified teachers. During this period of time, minban teachers made great contributions to education, doing

the same work as state-employed school teachers while receiving much lower salaries due to non-official status. With solid fieldwork on oral history of minban teachers and policy actors and deep examination of a wealth of policy documents in private and governmental archives, the author records the life history of minban teachers, the process of minban teacher policies, and the interaction between policies and individual strategies in M county (pseudonym), located in northern Jiangsu province of China. The book reveals many interesting and sometimes surprising findings about the characteristics of educational policy implementation in China. While China ' s minban teacher policies have come to an end, rural education continues to be a major concern of policymakers and researchers alike. The book is an important piece of scholarship for the readers interested in rural education in China, and in how state, society, and culture interact to influence teacher policies and management in the Chinese context.

following a general course of instruction, choosing neither the college-preparatory track nor the vocational option. This pattern, the report complained, had fostered low expectations and a curricular hodge-podge of classes that failed to prepare students for college or work. The commission called on states to implement academic requirements for all students, regardless of background, including four years of English and three years each of science, mathematics, and social studies. Students should not be sorted by their presumed future destinations, the commission reasoned, but should be offered an equal opportunity to get a high-quality education to fit them either for postsecondary education or the modern workplace. Two decades after the commission called on states to reform the high school environment and raise graduation requirements, the Brown Center on Education Policy at the Brookings Institution convened a group of prominent scholars to explore the current state of America's high schools, focusing on new research about reforming these institutions that are so important in the lives of the nation's adolescents. The questions considered reflected the diversity of the participants and covered a variety of areas—historical, international, sociological, and practical. Data gathered by the U.S. Department of Education show students today are taking many more advanced courses in mathematics and the sciences, while at the same time test scores do not reflect the increases in enrollments in academic courses. In addition, large score gaps remain among students from different social groups. Reform of the high schools must take into account the elementary and middle schools that prepare students and the postsecondary institutions to which students aspire. Adolescent culture and students' views about school and academic work play important roles in student achievement, as do the family and contemporary society in shaping of adolescent behavior. No matter their background, all participants agreed that the key to a successful high school rests with the extent to which it recognizes and strengthens its commitment to the intellectual growth of its students.
