Section 18 1 Review History Of Taxonomy | The Scientific

In biology, taxonomy is the science of naming, defining and classifying groups of biological organisms on the basis of shared characteristics. Organisms are grouped together into taxa and these groups are given a taxonomic rank; groups of a given rank can be aggregated to form a super-group of higher rank, thus creating a taxonomic hierarchy. The principal ranks in modern use are domain, kingdom, phylum, class, order, family, genus, and species. The Swedish botanist Carl Linnaeus is regarded as

Section 18-1 review history of taxonomy answers

Section Review 18-2 1. Species are classified into the same genus because they are closely related; that is, they share a more recent common ancestry. 2. Instead of grouping organisms only according to physical similarities, evolutionary classification also considers evolution-ary history. 3. Cladistic analysis considers only evo-

Classification Bi Worksheet - BIOLOGY JUNCTION

In botany, a section (Latin: sectio) is a taxonomic rank below the genus, but above the species. The subgenus, if present, is higher than the section, and the rank of series, if present, is below the section. Sections may in turn be divided into subsections. Sections are typically used to help organise very large genera, which may have hundreds of species.
