Photoreceptor Cells, Volume 15 covers the advances in the study of photoreceptor cells. The book discusses biochemical, cell and structural biological, and molecular biological techniques needed for the study of photoreceptor cells. The text also describes the methods for observing the structure of photoreceptor cells and for studying their metabolism. The procedures for photoreceptor cell isolation are also considered. The book further tackles the preparation of proteins involved in rod cell metabolism, with particular emphasis on proteins of the visual transduction cascade. The text also encompasses the application of molecular biological techniques for the examination of molecular components of the visual system and their structure, distribution, and function. Neuroscientists, ophthalmologists, biochemists, and people involved in the study of photoreceptor cells will find the book invaluable.

The authors are highly respected professionals in the UK. It is a short, highly readable and well illustrated book on general and systematic pathology, approached from the point of view of what medical students need to know in order to understand the clinical work they will eventually be doing. Includes a great variety of self-assessment, to reinforce the messages and to test understanding – and to help students prepare for exams. Concise synoptic (not telegraphic text). Appropriate self-assessment material. Only covers core, so student knows the whole book is essential. Includes key objectives. Contains simple and memorable diagrams for reproduction in exams. Ideal for learning as well as examination review, specifically trying to stimulate the student into assessing his/her own knowledge. The books in the series both complement other available major texts, but also contain enough material to stand in the own right. Provides examination practice. Part of co-ordinated series. Now general and systematic pathology combined in one volume. Further refinement to contents to reflect evolution of what is regarded as core knowledge. Major revision of self-assessment material to

match change in style of examination (mainly more EMQ- and OSCE-style questions). New cover design.

There has been a growing interest in the notion of a scholarship of teaching. Such scholarship is displayed through a teacher's grasp of, and response to, the relationships between knowledge of content, teaching and learning in ways that attest to practice as being complex and interwoven. Yet attempting to capture teachers' professional knowledge is difficult because the critical links between practice and knowledge, for many teachers, is tacit.

Intended for students of intermediate organic chemistry, this text shows how to write a reasonable mechanism for an organic chemical transformation. The discussion is organized by types of mechanisms and the conditions under which the reaction is executed, rather than by the overall reaction as is the case in most textbooks. Each chapter discusses common mechanistic pathways and suggests practical tips for drawing them. Worked problems are included in the discussion of each mechanism, and "common error alerts" are scattered throughout the text to warn readers about pitfalls and misconceptions that bedevil students. Each chapter is capped by a large problem set.
