## Biology 8.5 Translation

### Flashcards | Quizlet

This study guide is a written version of the material you have seen presented in the replication unit. In translation, the cell uses the genetic information contained in mRNA to make the proteins that carry out the cell 's work. The cell translates the code contained in the mRNA into a new language, the language of proteins, based on amino acids. Other types of RNA, such as transfer RNA (tRNA) also assist in the protein-

assembly process.
