Understanding Conflict Resolution Martinus Nijhoff Publishers

This thoroughly revised edition of Peter Wallensteen's text provides a comprehensive guide to understanding conflict resolution in the contemporary global environment. Understanding Conflict Resolution draws on recent and classic research from around the world, linking the theory of conflict resolution to in-depth case studies throughout. The first part reviews the development of conflict resolution since the Cold War and demonstrates the various approaches to conflict analysis. The core of the book explores the settlement of three major types of international conflict: inter-state, internal and those arising from state formation. In the final part, regional and international approaches are examined, and questions posed regarding the future of conflict resolution. This new edition has been brought fully

up to date with coverage of the ongoing 'war on terror', as well as events in Sudan, Lebanon, Sri Lanka and Zimbabwe. Part Three considers the developments in UN reform and the increasing importance of civil society organizations. Understanding Conflict Resolution remains an essential text for all students, lecturers and researchers of peace and conflict resolution in international relations, global politics and political science.

There is almost universal support for the view that the world would be an even more dangerous place if there were to be more nuclear-weapon states. There would be more fingers on more triggers and, probably, a greater risk that a trigger might be pulled with incalculable consequences. It is easy to see, therefore, that there is a collective interest in avoiding the spread of nuclear weapons to further countries. Nations do not, however, normally undertake or refrain from actions because of such a collective interest; they do so because of their individual interests. This is especially true in the field of national security. A nation perceiving that it has a real interest in developing nuclear weapons is not very likely to

refrain from doing so merely because it is told such development would be bad for the world community. If the global interest in avoiding the spread of nuclear weapons to more countries is to succeed, conditions that make it in the interest of each individual nation to renounce nuclear weapons need to be created or maintained. Fortunately, conditions have prevailed in which the vast majority of nations have seen an advantage in making legally binding nonproliferation commitments. An important rationale for many of these countries has been that these commitments would facilitate the transfer of desired civil nuclear technology.

The Interception of Vessels on the High Seas International Atomic Energy Agency

The principal aim of this book is to address the international legal questions arising from the 'right of visit on the high seas' in the twenty-first century. This right is considered the most significant exception to the fundamental principle of the freedom of the high seas (the freedom, in peacetime, to remain free of interference by ships of another flag). It is this freedom that has been challenged by a recent significant increase in interceptions to counter the threats of international terrorism and WMD proliferation, or to suppress transnational organised crime at sea, particularly the trafficking of narcotics and smuggling of migrants. The author questions whether the principle of non-interference has been so significantly curtailed as to have lost its relevance in the contemporary legal order of the oceans. The book begins with an historical and theoretical examination of the framework underlying interception. This historical survey

informs the remainder of the work, which then looks at the legal framework of the right of visit, contemporary challenges to the traditional right, interference on the high seas for the maintenance of international peace and security, interferences to maintain the 'bon usage' of the oceans (navigation and fishing), piracy j'ure gentium' and current counter-piracy operations off the coast of Somalia, the problems posed by illegal, unregulated and unreported fishing, interdiction operations to counter drug and people trafficking, and recent interception operations in the Mediterranean Sea organised by FRONTEX.
