Here is a unique book. It describes the theories and processes of repairing and adjusting the modern watch in precise and meticulous detail: a thing which has never been done so completely before in the many books on the same subject. As a text book it is a revelation. Taking nothing for granted, except the ability to read and comprehend a simple description of mechanical processes, de Carle takes his reader through every stage and every operation of watch repairing ...and to deal with them thoroughly is quite a programme - it takes 300 pages containing 24 chapters, two appendices and 553 illustrations. The fine draughtsmanship and accurate technical detail of the illustrations set a new standard. Practical Watch Repairing can justifiably claim to be the best illustrated book on practical horology yet issued, and one of the best of its kind on any subject. The publication of the book marks the beginning of a new epoch in the study of the mechanics of horology.

This book examines the history of creative applications of photovoltaic (PV) solar power, including sound art, wearable technology, public art, industrial design, digital media, building integrated design, and many others. The growth in artists and designers incorporating solar power into their work reflects broader social, economic, and political events. As the cost of PV cells has come down, they have become more accessible and have found their way into a growing range of design applications and artistic practices. As climate change continues to transform our environment and becomes a greater public concern, the importance of integrating sustainable energy technologies into our culture grows as well. The book will be of interest to scholars working in art history, design history, design studies, environmental studies, environmental humanities, and sustainable energy design.

Through a detailed re-reading of Saussure's work in the light of contemporary developments in the human, life and physical sciences, Paul Thibault provides us with the means to redefine and refocus our theories of social meaning-making. Saussure's theory of language is generally considered to be a formal theory of abstract sign-types and sign-systems, separate from our individual and social practices of making meaning. In this challenging book, Thibault presents a different view of Saussure. Paying close attention to the original texts, including the Cours de Linguistic Generale he demonstrates that Saussure was centrally concerned with trying to formulate a theory of how meanings are made. Re-reading Saussure does more than simply engage with Saussure's theory in a new and up-to-date way, however. In addition to demonstrating the continuing viability of Saussure's thinking through a range of examples, it makes an important intervention in contemporary linguistic and semiotic debate.

Silence is a key pedagogical issue in language education. Seen by some as a space for thinking and reflection during the learning process, for others silence represents a threat, inhibiting target language interaction which is so vital during second language acquisition. This book eschews stereotypes and generalisations about why so many learners from East Asia seem either reluctant or unable to speak in English by providing a state-of-the-art account of current research into the complex and ambiguous issue of silence in language education. The innovative research included in this volume focuses on silence both as a barrier to successful learning and as a resource that may in some cases facilitate language acquisition. The book offers a fresh perspective on ways to facilitate classroom interaction while also embracing silence and it touches on key pedagogical concepts such as teacher cognition, the role of task features, classroom interactional approaches, pedagogical intervention and socialisation, willingness to communicate, as well as psychological and sociocultural factors. Each of the book's chapters include self-reflection and discussion tasks, as well as annotated bibliographies for further reading.
