The emergence of the system of open and distance education is an inevitable and phenomenal evolution in the history of education developments internationally.

Access & Equity: Challenges for Open and Distance Learning crystallizes the emerging concerns of the open and distance learning institutions the world over. In the past few decades, a proliferation in the number of ODL institutions and courses/programmes offerings has resulted in exponential growth in student enrollment in the system. The system is poised for further expansion in the coming years as its virtually unlimited potential to impart education to anybody, anywhere and anytime is being recognised

by educationists, policy makers and planners.

There is however a large body of learners that has yet to be reached and providing access to them while ensuring equity poses definite challenges for the ODL system. The ODL system has the capacity to integrate the state-of-the-art technologies with the time-tested methodologies

Plant breeding is the art and science of changing the genetics of plants for the benefit of humankind. A major goal of plant breeders is to select genotypes with stable and high performing phenotypes across environments. However, a

selected genotype often performs differently across environments. This book presents a comprehensive review of various stability analysis methods and their application in plant breeding for selection of stable and high performing genotypes. Additionally, efficient methods to produce doubled haploid plants and to provide embryogenic suitable haploid cells systems are needed for future genetic manipulations and breeding in bread and durum wheat. This book describes a new stress in durum wheat, for its effectiveness to induce embryogenesis and regeneration plants. Along with its implications for plant selection, the methods used for dose-response variation are also explored, as well as the relationship between genetic variation and changes in dose-response behaviour. Other chapters in this book discuss the breeding strategy of self-incompatibility, an evolutionary force to preserve genetic variability in plants, the pros and cons of marker-assisted selection (MAS) breeding along with its future prospects, and the use of Joint Regression Analysis (JRA) in the management of plant breeding programs.

The working title of the book was The Detection of Analytes by the Resin Spot Tests Method. Firstly, we decided to sort out all published qualitative methods systematically against analytes. We were not discouraged by the obstacles, such as the study of a great number of papers published in Japanese, the difficulty in locating (especially older) publications, or the time required. Still, having in mind not to burden unnecessarily the volume of the book, we dismissed the idea of systematically listing all the procedures in detail. Nevertheless, a relatively large number of them found a place in the book, and perhaps this will contribute to the stirring of spontaneous interest in this technique in

the ranks of applied chemists and others who a priori shun the technique.

James B. Conant (1893-1978) was one of the titans of mid-20th-century American history, attaining prominence and power in multiple fields. Usually remembered as an educational leader, he was president of Harvard University for two tumultuous decades, from the Depression to World War II to the Cold War and McCarthyism. To take that job he gave up a scientific career as one of the country's top chemists, and he left it twenty years later to become Eisenhower's top diplomat in postwar Germany. Hershberg's prize-winning study, however, examines a critical aspect of Conant's life that was long obscured by government secrecy: his pivotal role in the birth of the nuclear age. During World War II, as an advisor to Roosevelt and then Truman (on the elite "Interim Committee" that

considered how to employ the bomb against Japan), Conant was intimately involved in the decisions to build and use the atomic bomb. During and after the Manhattan Project, he also led efforts to prevent a postwar nuclear arms race between the United States and the Soviet Union that, he feared, threatened the survival of civilization — an apocalyptic prospect he glimpsed in the first instant of the new age, when he witnessed the first test of the new weapon at Alamogordo on July 16, 1945. "... a vivid inquiry... a model of historiography; evocative reading...[Conant was] central to atomic policy and progress; the bomb would be as much Conant's as it was anyone's in Government. His inner response to that burden responsibility has long been obscured, but it is illumined here." — Philip Morrison, *The New York Times* Book Review "In his splendid portrait of Conant, James Hershberg has illuminated the life of a pivotal figure in the

making of U.S. nuclear, scientific, educational and foreign policy for almost a half-century. But the book is much more: It is not only an insightful narration of Conant's life; it is also a brilliant and important account of the making of the nuclear age, a chronicle that contains much that is new... Hershberg's superb study... is a chronicle of Conant's moral journey and we are the wiser for his having charted Conant's path." — S.S. Schweber, *Washington Post Book World* "James G. Hershberg ably comes to grips with Conant and his hazardous times... His book is vibrantly written and compelling, and it breaches Conant's shield of public discretion in masterly fashion, making extensive use of unpublished interviews, diaries, reports, and correspondence pried from private and governmental repositories. It is a huge, ambitious work — a history of the Cold War as Conant encountered it as well as a study of the man." — Daniel J. Kevles, *The New Yorker* "... a well-written, comprehensive, nonjudgmental but sensitive biography... Conant was involved in so many and such critical events that students of almost any aspect of our public life over the past half-century will find useful the new material and helpful insights in this book... This fine biography of one of the most important and complicated of America's twentieth-century leaders immediately establishes James Hershberg as one of America's outstanding young historians." — Stephen E. Ambrose, *Foreign Affairs* "... magnificent... Any reader interested in nuclear weapons, Cold War history or American politics from FDR to JFK will find this biography riveting." — Priscilla McMillan, *Chicago Tribune* "... masterful... The prose is clear, the narrative forceful and the author's judgments are balanced and judicious. This is simply splendid biography... The highest praise one can give for a book of

this sort is that the historian has not shrunk from speaking truth to power. This book quietly but insistently does so. It should be read by the public at large as one of the definitive texts on the cold war and the nuclear age...

Hershberg's triumph is that he has prevailed over all the official lies to give us one more layer of the historical truth." — Kai Bird, *The Nation* "... riveting... an impressive achievement... honest and comprehensive in its scholarship, the author has shown himself to be a historian of notable achievement and promise." — McGeorge Bundy, *Nature* "Hershberg's outstanding, balanced biography lifts the self-imposed secrecy surrounding a key architect of U.S. Cold War policy and of the nuclear age." — *Publisher's Weekly* "... [an] impressive and substantial achievement. [Hershberg] has used the life of one strategically placed individual to illuminate the most important issues surrounding America's

role and conduct in the nuclear age. His book will be invaluable to scholars assessing the impact and legacy of the group who acquired the epithet 'wise men' now that the Cold War has receded." — Carol S. Gruber, *Science* "... definitive... a far more textured picture than one finds in Conant's own guarded and unrevealing autobiography... an important and rewarding book... illuminating... Conant led a remarkable and eventful life in remarkable and eventful times. James Hershberg has explored that life, and those times, in exhaustive and revealing detail." — Paul Boyer, *The New Republic* "James G. Hershberg has achieved the impossible. He has written a huge biography of a Harvard president that is fascinating, informative and as valuable a piece of American history as anything I have read in years... Mr. Hershberg has brought us back vividly to an age that seems remote, so long ago, but the questions about nuclear

proliferation are the same, even while the answers are still ambiguous. As we watch men struggling with unanticipated post-Cold War problems and civil wars sprouting like Jason's men at arms, it is good to read this story about a complex man who deserves an important place in our history because he helped make that history possible." — Arnold Beichman, *The Washington Times* "... engrossing... A magisterial study of an awesome and intriguing public career." —Kirkus Reviews "... entertaining... thought-provocative." — Dick Teresi, *The Wall Street Journal* "Hershberg's book helps us more clearly understand the postwar Establishment and offers a challenging appraisal of the role of elites, of universities and of the state." — Gar Alperovitz, *In These Times* "Hershberg deserves great credit for cracking a tough New England walnut, analyzing this very important public figure, demonstrating how he fit into his own time and

showing us what we can learn from the man." — Daniel R. Mortensen, *The Friday Review of Defense Literature* "... a compelling account... an engaging examination of one of the central figures of the nuclear age. It succeeds in showing 'one man's intersection with great events and issues' and in the process illuminates those issues for us all." — *American Historical Review* "... well-written... Conant's participation in one of our country's most dynamic periods is, thanks to Hershberg, now much better understood." — *Library Journal* "A reader of the book will enter the realm of the greats, the shapers of worlds created by the atomic blasts at Hiroshima and Nagasaki... Conant was no bit player in Cold War history... [the book is] very successful in weaving Conant's subsurface persona in with his ups and downs as a prominent and committed public figure. And it leaves out little detail in describing top-level decisions involving the

Cold War geopolitics of nuclear weaponry. Conant was a participant in most of these decisions—with Presidents Roosevelt and Truman themselves, their Secretaries of War and State, and, of course, all the major scientific figures of the time.” — Chemical & Engineering News “A wonderfully rich portrait that emerges from a carefully documented account of Conant’s role in the development of the atomic bomb and post-war nuclear policy... An extraordinarily well written text... Hershberg lays bare the person behind the persona — warts, dimples and all.” — Stanley Goldberg, Bulletin of the Atomic Scientists

Politicians and journalists have never been among the most trusted professional classes; in this book, author Richard Forgette posits a "news grazing" explanation of how and why. Forgette, an expert on the U.S. Congress and public policy, draws upon direct experimental research to argue that the diffusion of media outlets and media technologies have resulted in an increasingly fragmented and distracted news audience.

Connecting the study of cognition to everyday life in an unprecedented way, E. Bruce

Goldstein's COGNITIVE PSYCHOLOGY: CONNECTING MIND, RESEARCH, AND EVERYDAY EXPERIENCE gives equal treatment to both the landmark studies and the cutting-edge research that define this fascinating field. A wealth of concrete examples and illustrations help students understand the theories of cognition-driving home both the scientific importance of the theories and their relevance to students' daily lives. Goldstein's accessible narrative style blends with an art program that makes difficult concepts understandable. Students gain a true understanding of the “behind the scenes” activity that happens in the mind when humans do such seemingly simple activities as perceive, remember, or think. Goldstein also focuses on the behavioral and physiological approaches to cognition by including physiological materials in every chapter. As is typical of his work, this fourth edition is a major

revision that reflects the most current aspects of the field. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Largely overshadowed by World War II's "greatest generation" and the more vocal veterans of the Vietnam era, Korean War veterans remain relatively invisible in the narratives of both war and its aftermath. Yet, just as the beaches of Normandy and the jungles of Vietnam worked profound changes on conflict participants, the Korean Peninsula chipped away at the beliefs, physical and mental well-being, and

fortitude of Americans completing wartime tours of duty there. Upon returning home, Korean War veterans struggled with home front attitudes toward the war, faced employment and family dilemmas, and wrestled with readjustment. Not unlike other wars, Korea proved a formative and defining influence on the men and women stationed in theater, on their loved ones, and in some measure on American culture. In the Shadow of the Greatest Generation not only gives voice to those Americans who served in the "forgotten war" but chronicles the larger personal and collective consequences of waging war the American way.
