2014 International Conference on Education and Management Science (ICEMS2014) will be held in Beijing, China on August 19-20, 2014. The main purpose of this conference is to provide a common forum for researchers, scientists, and students from all over the world to present their recent findings, ideas, developments and application in the border areas of Education and Management Science. It will also report progress and development of methodologies, technologies, planning and implementation, tools and standards in information systems. Education is an internal topic. It is a process of delivering knowledge in a basic meaning. Humans are hard to define the actual definition of education. But it is the key point for our society to step forward. Management science is the discipline that adapts the scientific approach for problem solving to help managers making informed decisions. The goal of management science is to recommend the course of action that is expected to yield the best outcome with what is available.

Examining the major approaches to hypothesis testing and model selection, this book blends statistical theory with recommendations for practice, illustrated with real-world social science examples. It systematically compares classical (frequentist) and Bayesian approaches, showing how they are applied, exploring ways to reconcile the differences between them, and evaluating key controversies and criticisms. The book also addresses the role of hypothesis testing in the evaluation of theories, the relationship between hypothesis tests and confidence intervals, and the role of prior knowledge in Bayesian estimation and Bayesian hypothesis testing. Two easily calculated alternatives to standard hypothesis tests are discussed in depth: the Akaike information criterion (AIC) and Bayesian information criterion (BIC). The companion website ([<http://www.guilford.com/weakliem-materials/>]) supplies data and syntax files for the book's examples.

Airasian presents complex concepts clearly so that pre-service teachers can understand them, and solidly grounds these concepts in best practice through practical, real, well-integrated examples. He talks to, not at users. The text conceives of classroom assessment in a broader way than many other texts. It focuses not only on the assessment needs of testing, grading, interpreting standardized tests, and performance assessments but also on assessment concerns in organizing a classroom at the start of school, planning and implementing instruction, and strategies of teacher self reflection. It views classroom assessment as an everyday, ongoing, integral part of teaching, not something that is separated from life in classrooms. The text is organized in a manner that follows the natural progression of teacher decision making, from organizing the class as a learning community to planning and conducting instruction to the formal evaluation of learning and, finally, to grading.
