It is a pleasure to take the opportunity to express my sincere gratitude to many colleagues who provided valuable hints for improvements, even including lists of misprints (which I hope

have now been completely eliminated). It is not possible to name all of them, and so I will only mention the interesting discussions over so many years I had with Professor Hans W. Pötzl of the Technical University of Vienna on the occasion of our common weekly semiconductor seminar. I am grateful to Professor H.-J. Queisser and Professor M. Cardona for helpful criticism. Special thanks are due to Frau Jitka Fucik for typing and Frau Viktoria Köver for drawing services. The cooperation with Dr. H.K. Lotsch of Springer-Verlag has been a pleasure. Special Features *Computer-based exercises and homework problems -- unique to this text and

comprising 25% of the total number of problems -- encourage students to address realistic and challenging problems, experiment with what if scenarios, and easily obtain graphical outputs.

Problems are designed to progressively enhance MATLAB-use proficiency, so students need not be familiar with MATLAB at the start of your course. Program scripts that are answers to exercises in the text are available at no charge in electronic form (see Teaching Resources below).

*Supplement and Review Mini-Chapters after each of the text's three parts contain an extensive review list of terms, test-like

problem sets with answers, and detailed suggestions on supplemental reading to reinforce students' learning and help them prepare for exams. *Read-Only Chapters, strategically placed to provide a change of pace during the course, provide informative, yet enjoyable reading for students.

*Measurement Details and Results samples offer students a realistic perspective on the seldom-perfect nature of device characteristics, contrary to the way they are often represented in introductory texts. Content Highlight
