Presenting a practical book on managing the patient Why To assist busy clinicians in clinical decision-making To reduce inappropriate clinical variation in practice To improve quality of care and patient safety How User-friendly ready reckoner Holistic approach Up-to-date Evidence-based For Whom General practitioners Primary care physicians Undergraduate medical students Postgraduates and Resident doctors Consultants This clinically oriented book covers more than 330 priority diseases in 11 specialties, focusing on clinical manifestations, therapeutic advances, patient management and patient education. This edition presents you with: Major revisions reflecting latest recommendations in all chapters, and presenting new algorithms. Key information on COVID-19 pandemic: - Restandardized cardio-pulmonary resuscitation algorithms and guidelines in view of the COVID-19 pandemic. - Severe acute respiratory infections (SARI) including COVID-19, management of COVID-19 and co-infections, Pregnancy in COVID-19, etc. A new chapter on tumours and cancers with a special focus on screening and early diagnosis and treatment of some of the most common cancers. Several new priority diseases namely syncope, button battery injuries, acute encephalitis syndrome, cerebral palsy, club foot, scrub typhus, herpes zoster ophthalmicus, frost bite, polycystic ovarian syndrome (PCOS), etc. Antimicrobial Stewardship principles in the treatment of infectious diseases. Large number of experts have contributed in this book to help solve the problems you encounter in everyday practice. This reader friendly, up-to-date and comprehensive book provides expert information you can use immediately in your clinical practice including

goals of treatment and assessment of response to therapy with step-up as well as step-down criteria. A busy clinician can thus make an informed, effective patient management decision for different levels of health care, from primary health care to detailed protocols for tertiary care health centres.

Genitourinary Cancers Wolters Kluwer India Pvt. Ltd.

This text presents an overview of the basic science and principles of high dose chemotherapy, current state-of-the-art techniques and future developments such as gene therapy. The main section of the book is disease-based, setting the scientific principles within a clinical context and reviewing the application of high dose therapy in specific diseases. Additional sections discuss supportive care and long-term complications. High Dose Chemotherapy is directed at hematologists, clinical and medical oncologists in training or with an interest, rather than direct involvement, in the field.

Imaging in Clinical Oncology Elsevier Health Sciences

This book addresses the most pressing current questions in the management of urologic malignancies. The rapid advances in imaging and molecular markers are placed into a clinical context, with explanation of their effects on prognosis and treatment planning. Similarly, progress in immunotherapy is carefully examined, focusing in particular on the role of immune checkpoint inhibitors in both early- and late-stage urologic malignancies. Looking beyond the improvements in minimally invasive techniques for urologic cancers, the impacts of care coordination pathways and enhanced recovery after surgery protocols are reviewed. Readers will also find enlightening discussion of the decision algorithm for the treatment of early-stage, high-grade bladder cancer, taking into account evidence on the most advanced treatment options and the circumstances in which surgery may need to be expedited. The penultimate chapter discusses the Cancer Genome Atlas project for bladder cancer, and the book closes by considering contemporary medical and surgical management of testicular cancer.

Diagnosis and Management of Testicular Cancer Springer Science & Business Media

This book provides the necessary information about not only the clinical aspects of caring for cancer survivors, but also the psychosocial impacts. There are multiple resources available to serve as oncology textbooks, but nothing to provide the necessary information on patient care for the non-MD members of the cancer patient management team. In the post-treatment phase, the management team must go beyond the realm of "conventional" follow-up, helping the patient to intellectually understand and

emotionally grasp the path ahead. Cancer Survivorship will prove a vital tool to physicians, nurses, clinical social workers and mental health professionals.

Pediatric Lymphomas Springer Nature

WHO Classification of Tumours of the Urinary System and Male Genital Organs is the eighth volume in the 4th Edition of the WHO series on histological and genetic typing of human tumours. This authoritative, concise reference book provides an international standard for oncologists and pathologists and will serve as an indispensable guide for use in the design of studies monitoring response to therapy and clinical outcome.

Diagnostic criteria, pathological features, and associated genetic alterations are described in a strictly disease-oriented manner. Sections on all recognized neoplasms and their variants include new ICD-O codes, epidemiology, clinical features, macroscopy, pathology, genetics, and prognosis and predictive factors. It contains numerous color photographs, MRIs, ultrasound images, CT scans, charts and references.

Husband & Reznick's Imaging in Oncology CRC Press

This comprehensive reference provides an overview of the general principles of cancer staging, as well as specific discussions of each tumour type across the body, including lymphoma and haematological malignancies. For each tumour, the pattern of disease involvement and disease spread are emphasized, the state-of-the-art imaging features surveyed, and the latest tumour staging and methods to assess treatment response are addressed. Separate sections discuss metastatic disease and the effects of treatment on normal and diseased tissues. The final section of the book highlights emerging functional and molecular imaging techniques to evaluate the different biological hallmarks of cancer.

Diseases of the Abdomen and Pelvis 2018-2021 Springer Science & Business Media

This is the first comprehensive book devoted exclusively to cancer in adolescents and young adults. It compiles medical, epidemiological, biological, psychological, and emotional issues of young adults' oncology. The emphasis is on the differences of the "same" cancer in younger and older patients. Model programs specially designed to care for patients in the age group and surveillance of long-term adverse effects are reviewed.

Testes Cancer, An Issue of Hematology/Oncology Clinics of North America - E-Book BoD – Books on Demand

This is a comprehensive textbook of Hodgkin's and non-Hodgkin's lymphomas written by leaders in the field of childhood lymphomas. It includes clinical, pathologic and molecular biology of each subtype of lymphoma. The pathology chapters are comprehensive and include excellent photographs. The book is at the level of subspecialists in pediatric hematology and oncology, radiation oncology, pediatric surgery and hematopathology.

Testicular Cancer, An Issue of Urologic Clinics Springer

This book is a comprehensive guide to the use of modern radiation therapy techniques for prostate cancer and other common and rare genitourinary malignancies. It will be an ideal resource for clinicians and trainees wishing to delve more deeply into the practical and technical aspects of radiotherapy for these malignancies and will serve to enhance day-to-day management in clinical practice. The first section is devoted to prostate cancer and includes coverage of low dose rate and high dose rate brachytherapy, conventionally fractionated, moderately hypofractionated, and ultra-hypofractionated external beam radiotherapy, and proton therapy. The second section focuses on radiotherapy considerations in relation to bladder cancer, testicular cancer, renal cell carcinoma, and rare malignancies such as penile cancer and urethral cancer. Radiotherapeutic treatment of patients with genitourinary malignancies now involves unprecedented precision and complexity, and this book will enable readers to exploit fully the exciting advances that have been achieved in recent years.

An updated and revised resource to evidence-based urology information and a guide for clinical practice

The revised and updated second edition of Evidence-Based Urology offers the most current information on the suitability of both medical and surgical treatment options for a broad spectrum of urological conditions based on the best evidence available. The text covers each of the main urologic areas in specific sections such as general urology, oncology, female urology, trauma/reconstruction, pediatric urology, etc. All the evidence presented is rated for quality using the respected GRADE framework. Throughout the text, the authors highlight the most patient-important, clinical questions likely to be encountered by urologists in day-to-day practice. A key title in the "Evidence-Based" series, this revised and expanded edition of Evidence-Based Urology contains new chapters on a variety of topics including: quality improvement, seminoma, nonseminomatous germ cell tumor, penile cancer, medical prophylaxis, vesicoureteral reflux disease, cryptorchidism, prenatal hydronephrosis, and myelodysplasia. This updated resource: Offers a guide that centers on 100% evidence approach to medical and surgical approaches Provides practical recommendations for the care of individual patients Includes nine new chapters on the most recently trending topics Contains information for effective patient management regimes that are supported by evidence Puts the focus on the most important patient and clinical questions that are commonly encountered in day-to-day practice Written for urologists of all levels of practice, Evidence-Based Urology offers an invaluable treasure-trove of evidence-based information that is distilled into guidance for clinical practice.

Handbook of Prostate Cancer and Other Genitourinary Malignancies provides a patient-centered, practical approach to diagnosis, treatment, and clinical management of cancers found in the genitourinary system. With the recent surge of new available treatments, new AJCC Staging guidelines and changes in approaches to care, remaining current and up-to-date can be extremely challenging for practicing clinicians. This comprehensive, multidisciplinary handbook is designed with the busy oncologist, urologist, general practitioner, and trainee in mind. The handbook discusses the standards and controversies of care for managing each genitourinary malignancy and stage of disease, including expert insight and recommendations for making treatment decisions from oncologists and urologists. Clearly marked key points emphasize the most important concepts in each chapter, while numerous tables and figures summarize and highlight important information for quick reference. Handbook of Prostate Cancer and Other Genitourinary Malignancies is an indispensable guide for all oncologists, urologists, and practitioners who regularly care for prostate cancer patients and patients with kidney cancer, bladder cancer, upper urothelial tract cancer, testicular cancer, or penile cancer. Key Features: Delivers the need-to-know points of prostate cancer screening, including recommendations on how to assess severity, avoid misdiagnosis, and mitigate overtreatment of low-grade prostate cancer Provides clinical pearls and treatment recommendations for patients who don't 'fit' the standard guidelines Covers all FDA-approved therapies for each genitourinary malignancy and indicates therapies that are in clinical trials Prepares physicians for challenging case scenarios and treatment decisions where controversies to clinical management persist Includes

Artificial Intelligence in PET/CT Oncologic Imaging Springer Publishing Company

This book presents the views of leading European experts on the diagnosis and management of testicular cancer, with coverage of current hot topics in the field. It opens by providing an overview of the recommendations in the most recent consensus paper from the European Germ Cell Cancer Consensus Group, which is based on interdisciplinary cooperation among urologists, medical oncologists, radio-oncologists, pathologists, and basic scientists. The remainder of the book focuses on areas of controversy in the diagnosis, treatment, and follow-up of testicular cancer. In each case the evidence base is discussed and results from the most recent studies are reviewed, drawing attention to new findings that might alter treatment recommendations. The treatment-related chapters cover a broad range of issues, including the best approach in patients with poor-prognosis and recurrent disease and those with long-term toxicities. Relevant aspects of survivorship care are also addressed. The book will help clinicians and practitioners to achieve the goals of minimizing therapy and its side-effects without reducing efficacy in low stage disease, improving the cure rate in advanced disease, and enhancing follow-up and long-term survivorship.

High Dose Chemotherapy CRC Press

Germ cell tumors are relatively rare compared with other malignancies, and compilations of knowledge that encompass the entire spectrum of the disease are lacking. This textbook, written by the foremost authorities in the field, rectifies the situation by discussing in depth a broad range of topics, including biology, epidemiology, pathology, treatment, and late effects. Bearing in mind that germ cell tumors are most prevalent in the adolescent and young adult age group, causes of disease and treatment approaches in pediatric and adult patients are compared and contrasted. By spanning the entire life course, from prenatal origins of disease through to treatment in adults and late effects of treatment, the editors have produced a book that will be of interest to both pediatric and adult oncologists.

Radiation Therapy for Genitourinary Malignancies Lippincott Raven

This edition of ICD-O, the standard tool for coding diagnoses of neoplasms in tumour and cancer registrars and in pathology laboratories, has been developed by a working party convened by the International Agency for Research on Cancer / WHO. ICD-O is a dual classification with coding systems for both topography and morphology. The book has five main sections. The first provides general instructions for using the coding systems and gives rules for their implementation in tumour registries and pathology laboratories. Section two includes the numerical list of topography codes, which remain unchanged from the previous edition. The numerical list of morphology codes is presented in the next section, which introduces several new terms and includes considerable revisions of the non-Hodgkin lymphoma and leukaemia sections, based on the WHO Classification of Hematopoietic and Lymphoid Diseases. The five-digit morphology codes allow identification of a tumour or cell type by histology, behaviour, and grade. Revisions in the morphology section were made in consultation with a large number of experts and were finalised after field-testing in cancer registries around the world. The alphabetical index gives codes for both topography and morphology and includes selected tumour-like lesions and conditions. A guide to differences in morphology codes between the second and third editions is provided in the final section, which includes lists of all new code numbers, new terms and synonyms added to existing code definitions, terms that changed morphology code, terms for conditions now considered malignant, deleted terms, and terms that changed behaviour code.

Building on the success of this book's first edition, Dr. Eric Hansen and Dr. Mack Roach have updated,

revised, and expanded the Handbook of Evidence-based Radiation Oncology, a portable reference that utilizes evidence-based medicine as the basis for practical treatment recommendations and guidelines. Organized by body site, concise clinical chapters provide easy access to critical information. Important "pearls" of epidemiology, anatomy, pathology, and clinical presentation are highlighted. Key facets of the work-up are listed, followed by staging and/or risk classification systems. Treatment recommendations are discussed based on stage, histology, and/or risk classification. Brief summaries of key trials and studies provide rationale for the recommendations. Practical guidelines for radiation techniques are described. Finally, complications and follow-up guidelines are outlined. Updates from the first edition include brand new color figures and color contouring mini-atlases for head and neck, gastrointestinal, prostate, and gynecological tumors; redesigned tables for increased readability; new chapters on management of the neck and unknown primary, clinical radiobiology, and pediatric malignancies and benign conditions; and new appendices including the American College of Radiology guidelines for administration of IV contrast.

Intracranial germ cell tumors are a group of uncommon neoplasms of the central nervous system. The clinical features and natural history of these lesions are quite unique and variable. While intracranial germ cell tumors have been a fascination to neurooncologists for decades, the relatively small number of patients seen in any single institution has hampered the important clinical investigation that is so needed. This text is complete with detailed information concerning the epidemiology, pathology, oncological biology, clinical findings, radiology, and treatment options including surgical strategy, radiotherapy, and chemotherapy for this heterogeneous group of neoplasms. The ongoing clinical trials concerning the optimization of therapy are efficiently summarized. An important final segment addresses the late sequelae of therapy which is of great significance since the majority suffering from these tumors are young patients. This first and only book on intracranial germ cell tumors includes excellent and comprehensive data sheets, illustrations, and radiograms. It provides a detailed and outstanding reference source for physicians taking care of patients with intracranial germ cell tumors, and will be a very welcome edition to their reference libraries.

Male reproductive health is an important area affecting men's overall health and well-being. Infertility is a worldwide problem that affects approximately 15% of married couples. Half of these cases can be traced to male partners. Infertile men are at an elevated risk of cancer development later in life, primarily genitourinary malignancies such as testicular and prostate cancer. This book will focus on male reproductive health, from the aspects of semen quality, male infertility, testicular cancer, and prostate cancer, and their detection, diagnosis, treatment, and prevention.

Nuclear Oncology describes the use of radionuclides in the diagnosis and management of malignant tumors. Both in vivo and in vitro techniques are included. The book was written by an international panel of authors, most, if not all, of whom are the pioneers of the techniques described. Their chapters reflect the universal views in the field of nuclear medicine and oncology. Clinical aspects and technical details are presented for both standard and new nuclear oncological techniques, including breast scintigraphy, receptor imaging, monoclonal antibodies and positron emission tomography. This information will therefore be helpful to those dealing with the diagnosis and therapy of cancer using radionuclides, including medical oncologists, radiation oncologists, oncologic surgeons,

nuclear medicine physicians and radiologists. Attention is devoted to potential areas of clinical research in nuclear oncology. Therapeutic use of radionuclides is emphasized.
