Discovering Psychology: The Human Experience Telecourse Study Guide Macmillan
Long regarded as the gold standard in sensation and

perception texts, E. Bruce Goldstein's SENSATION AND PERCEPTION has helped more than 100,000 students make the connection between perception and physiology. Goldstein has crafted a briefer, easier-to-understand, and more student-friendly book, without sacrificing the text's comprehensive examination of sensation and perception. Goldstein takes readers on an intriguing journey through their senses, and chronicles scientists' efforts to understand the fascinating behind-the-scenes activity that allows us to perceive. With

balanced coverage of all the senses, this book offers an integrated examination of how the senses work together. Goldstein shows readers how seemingly simple experiences are actually extremely complex mechanisms and examines both the psychophysical and physiological underpinnings of perception. All material is presented in a way students find interesting and easy to follow. The book's visually dynamic presentation includes numerous color plates that are presented as visual topic essays. In addition, more than 50 hands-on demonstrations illustrate perceptual

experiences. All are simple enough for students to do and are seamlessly integrated into the flow of the text.

Sensation and Perception

Essentials of Sensation and Perception
For every chapter, the Study Guide will include a "Preview" and "At A Glance" sections (both provide an overview of and objectives for the chapter). Each major topic includes a progress test, comprised of multiple-choice, matching, and/or true/false questions. The Guide also contains "Graphic Organizers," which encourage students to complete graphs, charts, and flow diagrams that ultimately provide a visual synopsis of text

material. End-of-chapter material includes "Something To Think About" sections, which contain thought provoking questions designed to encourage critical thinking and application of the material.

NCLEX-RN Content Review Guide
Macmillan

Longtime Myers collaborator Richard Straub's study guide is customized to follow the modular format and contents of the text. **Study Guide for Houston, Bee, Hatfield, and Rimm's Invitation to Psychology** SAGE Publications
This new edition continues the story of psychology with added

research and enhanced content from the most dynamic areas of the field--cognition, gender and diversity studies, neuroscience and more, while at the same time using the most effective teaching approaches and learning tools.

Anatomy and Physiology Jones & Bartlett Publishers

Synthesizing coverage of sensation and reward into a comprehensive systems overview, *Neurobiology of Sensation and Reward* presents a cutting-edge and multidisciplinary approach to the interplay of sensory and reward processing in the brain. While over the past 70 years these areas have drifted apart, this book makes a case for

reuniting sensation and reward by highlighting the important links and interface between the two. Emphasizing the role of reward in reinforcing behaviors, the book begins with an exploration of the history, ecology, and evolution of sensation and reward. Progressing through the five senses, contributors explore how the brain extracts information from sensory cues. The chapter authors examine how different animal species predict rewards, thereby integrating sensation and reward in learning, focusing on effects in anatomy, physiology, and behavior. Drawing on empirical research, contributors build on the themes of the book to present insights into the human sensory rewards of

perfume, art, and music, setting the scene for further cross-disciplinary collaborations that bridge the neurobiological interface between sensation and reward.

NCLEX-RN Content Review Guide

Macmillan

"This study guide is designed for use with *The Developing Person Through the Life Span, Sixth Edition*, by Katleen Stassen Berger. It is intended to help students evaluate their understanding of that material, and to review any problem areas. [Sections such as] 'How to Manage Your Time Efficiently,' 'Study more effectively', and 'Think Critically' provide detailed instructions on how to use the

textbook. Each chapter ... includes a Chapter Overview, a set of Guided Study questions, a Chapter Review section, and three review tests." --Preface.

Pediatric Nurse Practitioner Certification Review Guide

Simon and Schuster

For every major content section, longtime author Richard Straub has divided each module by major topic; each section includes a Preview (objectives that require short answers) and "Stepping Through the Section" (which include detailed, fill-in-the-blank questions). The Study Guide

also includes self-tests, critical-thinking exercises, vocabulary and language activities, Internet activities, and crossword puzzles.

A Psychology of the Creative Eye Macmillan

The highly accessible *Sensation and Perception* presents a current and accurate account of modern sensation and perception from both a cognitive and neurocognitive perspective. To show students the relevance of the material to their everyday lives and

future careers, authors Bennett L. Schwartz and John H. Krantz connect concepts to real-world applications, such as driving cars, playing sports, and evaluating risk in the military. Interactive Sensation Laboratory Exercises (ISLE) provide simulations of experiments and neurological processes to engage readers with the phenomena covered in the text and give them a deeper understanding of key concepts. The Second Edition includes a revamped version of the In Depth feature from the previous edition in new

Exploration sections that invite readers to learn more about exciting developments in the field. Additionally, new Ponder Further sections prompt students to practice their critical thinking skills with chapter topics.

Perceptual Organization MIT Press

The study of sensation and perception looks at how we acquire, process, and interpret information about the outside world. By describing key ideas from first principles, this straightforward introduction provides easy access to the basic concepts in the subject, and incorporates the most recent advances with useful historical

background. The text takes a uniquely integrative approach, highlighting fundamental findings that apply across all the senses - including vision, hearing, touch, pain, balance, smell and taste - rather than considering each sense in isolation. Several pedagogical features help students to engage with the material. 'Key Term' and 'Key Concept' boxes describe technical terms and concepts whilst 'Question' boxes relate the material to everyday questions about perception. Each chapter ends with suggestions for further reading, and the final chapter draws together the material from the previous chapters, summarizing the broad principles described, and outlining some major unresolved

issues. Assuming no prior knowledge, this book is an accessible and up-to-date overview of the processes of human sensation and perception. Presented in full color, it is an ideal introduction for pre-undergraduate and first year undergraduate students on courses in psychology, as well as neuroscience and biology.

Stevens' Handbook of Experimental Psychology and Cognitive Neuroscience, Learning and Memory Routledge

This briefer, streamlined version of Don and Sandra Hockenbury's acclaimed text, Psychology, Second Edition, warmly invites students to explore the science that speaks

most directly to their everyday lives. Using a narrative rich with engaging anecdotes and real-life stories--often drawn from the authors' own lives and experiences--Discovering Psychology helps to clarify abstract concepts and psychological principles. With its smart pedagogy, attractive design and state-of-the-classroom media and supplements package, there is no text better equipped for introducing students to the science that speaks most directly to their everyday lives.
