The bestselling autobiography of American baseball and civil rights legend Jackie Robinson Before Barry Bonds, before Reggie Jackson, before Hank Aaron, baseball's stars had one undeniable trait in common: they were all white. In 1947, Jackie Robinson broke that barrier, striking a crucial blow for racial equality and changing the world of sports forever. *I Never Had It Made* is Robinson's own candid, hard-hitting account of what it took to become the first black man in history to

play in the major leagues. *I Never Had It Made* recalls Robinson's early years and influences: his time at UCLA, where he became the school's first four-letter athlete; his army stint during World War II, when he challenged Jim Crow laws and narrowly escaped court martial; his years of frustration, on and off the field, with the Negro Leagues; and finally that fateful day when Branch Rickey of the Brooklyn Dodgers proposed what became known as the "Noble Experiment"—Robinson would step up to bat to integrate and revolutionize baseball. More than a baseball story, *I Never Had It Made* also reveals the highs and lows of Robinson's life after baseball. He recounts his political aspirations and civil rights activism; his friendships with Martin Luther King, Jr., Malcolm X, William Buckley, Jr., and Nelson Rockefeller; and his troubled relationship with

---

his son, Jackie, Jr. I Never Had It Made endures as an inspiring story of a man whose heroism extended well beyond the playing field.

Macmillan

This book is divided into five sections dealing with various fundamental issues in current research: attention, information processing and eye movement control; the role of phonology in reading; syntax and discourse processing and computational models and simulations. Control and measurement of eye movements form a prominent theme in the book. A full understanding of the where and when of eye movement control is a

prerequisite of any complete theory of reading, since it is precisely at this point that perceptual and cognitive processes interact. Amongst the 'hot topics' included are the relation between parafoveal and foveal visual processing of linguistic information, the role of phonology in fluent reading and the emergence of statistical 'tuning' approaches to sentence parsing. Also discussed in the book are three attempts to develop quantitative models of reading which represent a significant departure in theory-building and a quantum step in the maturation of reading research. Much of the work reported in the book was first presented at the 5th European Workshop on Language Comprehension organised in April 1998 which was held at the CNRS Luminy Campus, near Marseilles. All contributions summarise the state-of-the-art in the relevant areas of reading

research.
